## RI-23GP Series Dry Reed Switch

## RI-23GP Series

Micro dry-reed switch hermetically sealed in a gas-filled envelope. Singlepole, single-throw (SPST) type, having normally open contacts, and containing two magnetically actuated reeds.

The switch is of the double-ended type and may be actuated by an electromagnet, a permanent magnet or a combination of both. The device is intended for use in sensors, relays, pulse counters or similar devices.

## RI-23GP Series Features

- General purpose reed switch
- Contact layers: gold, plated ruthenium
- Superior glass-to-metal seal and blade alignment
- Excellent life expectancy and reliability
- UL File \#E125629

## Dimensions for RI-23GP Series

All Dimension in inches (mm) nominal

## General data for all models RI-23GP

## AT-Customization / Performed Leads

Besides the standard models, customized products can also be supplied offering the following options:

- Operate and release ranges to customer specification
- Cropped and/or performed leads

## Life expectancy and reliability

The life expectancy data given below are valid for a coil energized at 1.25 times the published maximum operate value for each type in the RI-23GP series.

## No load conditions (operating frequency: 100Hz)

Life expectancy: min. $10^{8}$ operations with a failure rate of less than $10^{-9}$ with a confidence level of $90 \%$.
End of life criteria:
Contact resistance > $1 \Omega$ after 2 ms
Release time $>2 \mathrm{~ms}$ (latching or contact sticking).

End of life criteria:
Contact resistance $>2 \Omega$ after 4 ms
Release time $>0.7 \mathrm{~ms}$ (latching or contact sticking).
Switching different loads involves different life expectancy and reliability data. Further information is available on request.

## Mechanical Data

Contact arrangement is normally open; lead finish is tinned; net mass is approximately 190 mg ; and can be mounted in any position.

## Shock

The switches are tested in accordance with "IEC 68-2-27", test Ea (peak acceleration 150 G , half sinewave; duration 11 ms ). Such a shock will not cause an open switch (no magnetic field present) to close, nor a switch kept closed by an 80 AT coil to open.

## Loaded conditions (resistive load: 12V; 4 mA ; ( 15 mA peak); operating frequency: $\mathbf{1 7 0} \mathbf{~ H z}$ )

Life expectancy: min. $10^{7}$ operations with a failure rate of less than $10^{-8}$ with a confidence level of $90 \%$.

*AT values are based on full length, measured using Philips Standard Coil (PSC).

## Vibration

The switches are tested in accordance with "IEC 68-2-6", test Fc (acceleration 10G; below cross-over-frequency 57 to 62 Hz ; amplitude 0.75 mm ; frequency range 10 to 2000 Hz ; duration 90 minutes.) Such a vibration will not cause an open switch ( no magnetic field present) to close, nor a switch kept closed by an 80 AT coil to open.

## Mechanical Strength

The robustness of the terminations is tested in accordance with "IEC 68-2-21", test Ua1 (load 40 N).

## Operating and Storage Temperature

Operating ambient temperature; min: $-55^{\circ} \mathrm{C}$; max: $+125^{\circ} \mathrm{C}$. Storage temperature; min: $-55^{\circ}$; max: $+125^{\circ} \mathrm{C}$. Note: Temperature excursions up to $150^{\circ} \mathrm{C}$ may be permissible. For more information contact your nearest Comus Group sales office.

## Soldering

The switch can withstand soldering heat in accordance with "IEC 68-2-20", test Tb, method 1B: solder bath at $350 \pm 10^{\circ} \mathrm{C}$ for $3.5 \pm 0.5 \mathrm{~s}$. Solderability is tested in accordance with "IEC 68-2-20" test Ta, method 3: solder globule temperature $235^{\circ} \mathrm{C}$; ageing 1 b : 4 hours steam.

## Welding

The leads can be welded.

## Mounting

The leads should not be bent closer than 1 mm to the glass-to-metal seals. Stress on the seals should be avoided Care must be taken to prevent stray magnetic fields from influencing the operating and measuring conditions.
