

### ■ Features

1. 0.5mm pitch
2. Stacking (Height : 8 - 30mm)/vertical
3. Contacts available : 20/40/60/80/100/120 for signal + 4 for power source
4. Floating movable amount : X direction :  $\pm 0.6\text{mm}$  ; Y direction:  $\pm 0.6\text{mm}$   
A floating movement above the connector pitch is possible. (Fig.1)
5. High-speed transmission (8+ Gbps)
6. Hybrid power design (3A/pin $\times$ 4 lines)  
The guide posts on both sides of the connector are equipped with 4 lines of power contacts in addition to the signal contact. (Fig.2)
7. Current capacity : Signal contact 0.5A/pin, power contact 3A/pin
8. Available for automatic mounting (absorption tape is attached as standard equipment)
9. Excellent mating performance due to the large guide post.

### ■ Signal integrity

#### ● ICR (Insertion-loss-to-Crosstalk-Ratio)

The ICR containing cross-talk from 5 adjacent differential pairs provides adequate margin in comparison with the criteria based on the specification of IEEE802.3ap.

#### ● Differential impedance

Differential impedance is  $100\pm 10\Omega$  at the rise time of 87.5ps (20 to 80%).

Floating ability : XY-axis $\pm 0.6\text{mm}$

## High-speed transmission property (FX23 : h=15mm, FX23L : h=12mm)

### ●Pin assignment

The following pin arrangement is recommended to match the 100Ω differential impedance and to contain cross-talk.

### ●Differential impedance 80ps rise time (20 to 80%)

Meets the criterion of 100±10Ω at the rise time of 80ps (20 to 80%).

# ● Insertion loss

# ● Return loss

Passes insertion loss, return loss up to 5GHz.

# ● Near end cross-talk (NEXT)

# ● Far end cross-talk (FEXT)

Low cross-talk up to 10GHz.

## ● Insertion loss/cross-talk ratio (ICR) for FEXT

Insertion loss/cross-talk ratio (ICR) for FEXT using 5 sets of Aggressors has an adequate margin according to the specification of IEEE802.3ap.

## ■ List of connection variations (vertical connection)

Right angle receptacle

FX23-\*\*-S-0.5SH

Vertical header

\*\*⇒Number of contacts : 20, 40, 60, 80, 100, 120

Note : FX23L-\*\*-P-0.5SV8 and FX23-\*\*-S-0.5SH can not engage since the metal hold down interferes each other.

■List of connection variations (Parallel connection)

●Height variation

**FX23L series**  
**Standard Type**

Floating range :  
XY direction  $\pm 0.6\text{mm}$

**FX23×FX23L series**  
**Double Floating Type**

Floating range :  
XY direction  $\pm 1.2\text{mm}$

**FX23×FX23L series**  
**Rigid Type**

⚠ No floating ability

**FX23 series**  
**Standard Type**

Floating range :  
XY direction  $\pm 0.6\text{mm}$

## ◆ In Regards to Storing FX23 Series

There are two types of tray (A and B) for the FX23 series.

These have been designed to stack in alternating order (A-B-A-B...) for shipping and storage.

If tray A is stacked on top of another tray A, or if tray B is stacked on top of another tray B, the trays will put a load on the connectors, potentially causing connector breakage or deformation.

When stacked correctly, the outer structure of the trays will prevent any load from being placed on the connectors below.

When stacked incorrectly, the outer structure of the trays will not function, resulting in adding load to the connector.

When storing the FX23 series, please ensure that the trays are stacked in alternating order. Thank you.

## ◆ Recommended temperature profile

### <Applicable conditions>

Test PCB Dimension : 110×60×1.6mm  
 Material : Glass epoxy  
 Solder composition : Sn-3Ag-0.5Cu  
 Flux content : 11wt%  
 Metal mask thickness : 0.12mm, 0.15mm  
 Number of reflow times : 2 times max.

\*The temperature profile is a reference under the condition of the above settings : Temperature profile may change depending on the conditions such as solder paste types, manufacturers, PCB size, and other soldering materials, please fully check the mounting conditions before use.

## ◆ Cleaning conditions

### ● Cleaning with organic solvent

| Solvent                 | Cleaning at normal temperature | Heating cleaning |
|-------------------------|--------------------------------|------------------|
| IPA (Isopropyl alcohol) | ○                              | ○                |

### ● Cleaning with water

When water-type cleaning agents (terpene, alkaline saponification agents) are used, select cleaning agents based on the 'table of influence' on metals and resins issued by the cleaning agent manufacturer. Caution : Do not leave with any water content left.

### ● Precautions in cleaning

When cleaning the parts with organic solvents and water-type agents, if flux or cleaning agents remain in the connector, it could cause the deterioration of electric performance. Please be sure to check if adequate cleaning has been carried out.

## ◆ Precautions in use

### ● About the specified dimension between PCBs

The dimension between PCBs shall be within the following range :

## ● Fixation among PCBs

Please take measures to fix the PCB other than using connectors.

## ● Cautions in mating operations

- This connector is designed to prevent reverse insertion. The connector could be damaged if excessive force is exerted when mating. Avoid excessive force when mating. Mate only after confirming the following connector properties (chamfer of the external face) :

- The allowable misalignment is  $\pm 1.2\text{mm}$  in both the X and Y directions. After mating is started, proceed with the operation along a straight line without forcing the connector.

- When mating / un-mating, it is strongly recommended to insert or remove in a straight line. If not possible, the operation shall be carried out within the following angle. Moreover, during the mating operation, be sure to proceed without forcibly applying a load to the connector. Allow the connector to be placed straight when the mating operation is completed.

X direction (longitudinal direction)  $\Rightarrow$  for 20, 40, 60-pos. : within  $2^\circ$  ; for 80, 100, 120-pos. : within  $10^\circ$

Y direction (transverse direction)  $\Rightarrow$  within  $0.5^\circ$

(However, this is not a recommended operation. Damage to the connector could occur.)

## ● Permissible position deviation in the mated state (floating movable amount)

This connector is designed to float when mated, the permissible PCB position deviation in the mated state is  $\pm 0.6\text{mm}$  in both the X and Y directions.

However, it is not applicable to absorbing when the position deviation amount is continually changing due to vibration etc. Be sure to secure PCBs after mating. Additionally, the number of repetitive floating operations shall be according to the number of connector insertion/withdrawal cycles.
