

ZNB8 vs AEM Test

RF Measurements

LEONI

Measurement Setup

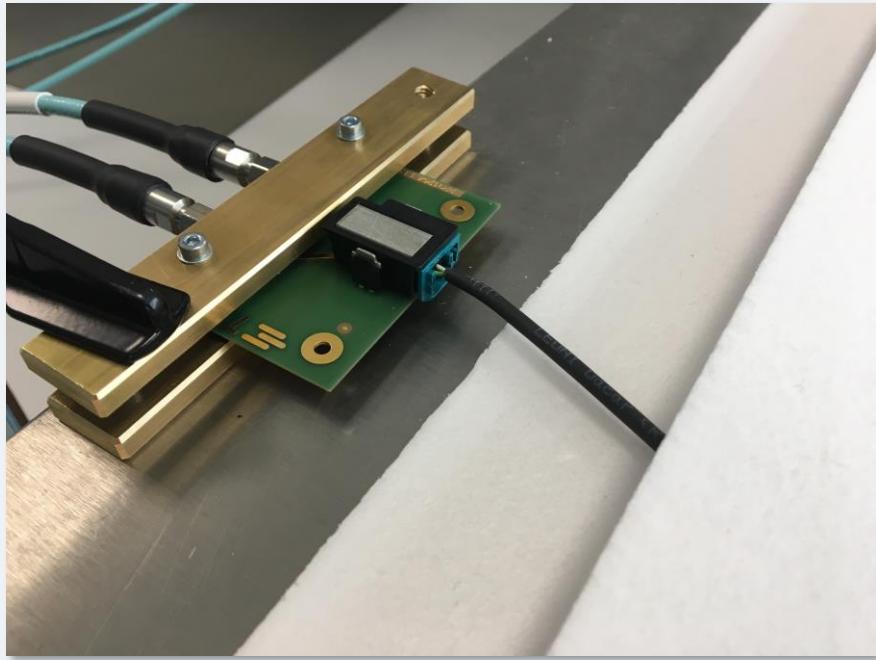

Vector Network Analyzer

- › Rohde & Schwarz ZNB8
- › 4port Vector Network Analyzer
- › 9kHz-8.5GHz
- › New frontend for 1000Base-T1 LCL accuracy

MMVNA

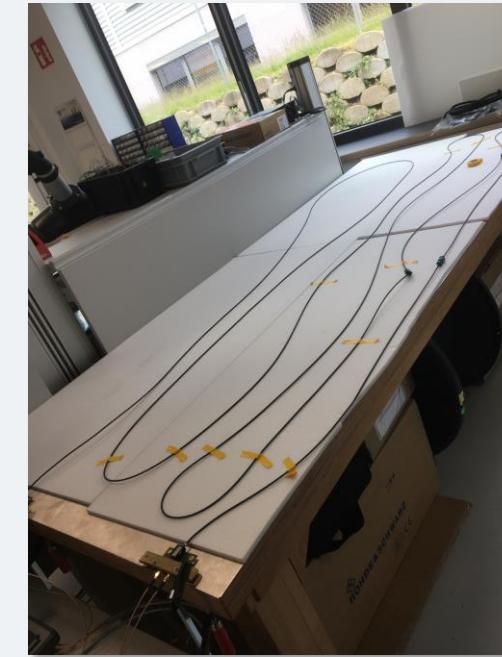

- › AEM Test
- › Portable 8-port VNA
- › 125kHz-3GHz

Measurement Setup

RF test fixture

- › TE MATEnet 1port

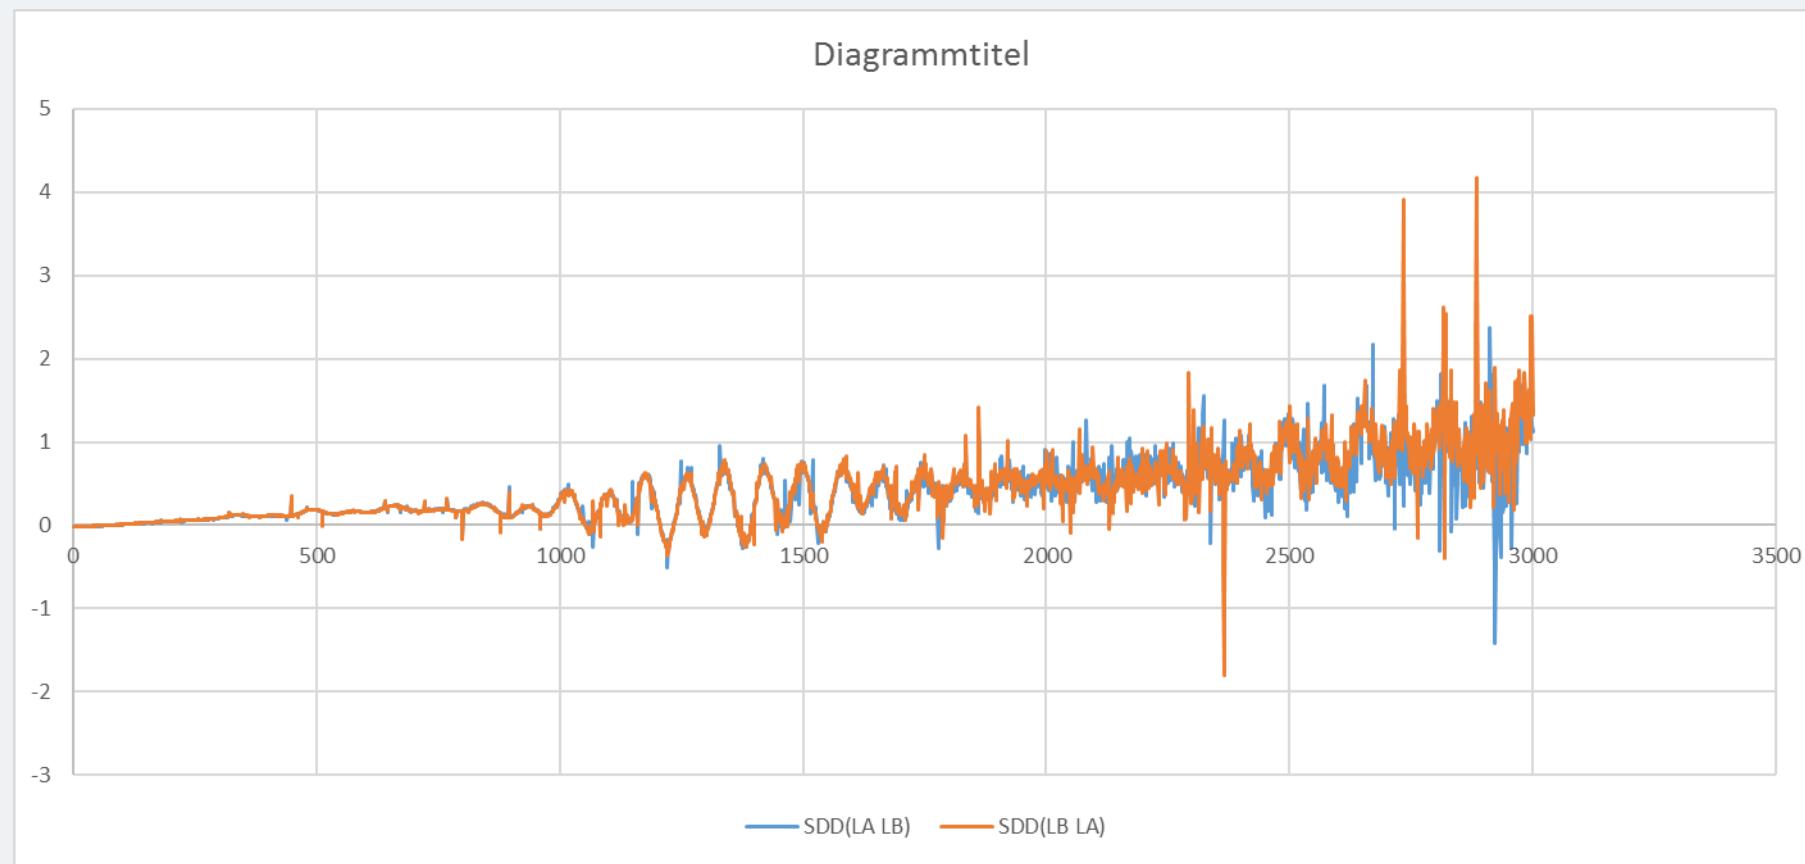

Test setup

- › According to OPEN Alliance TC2*

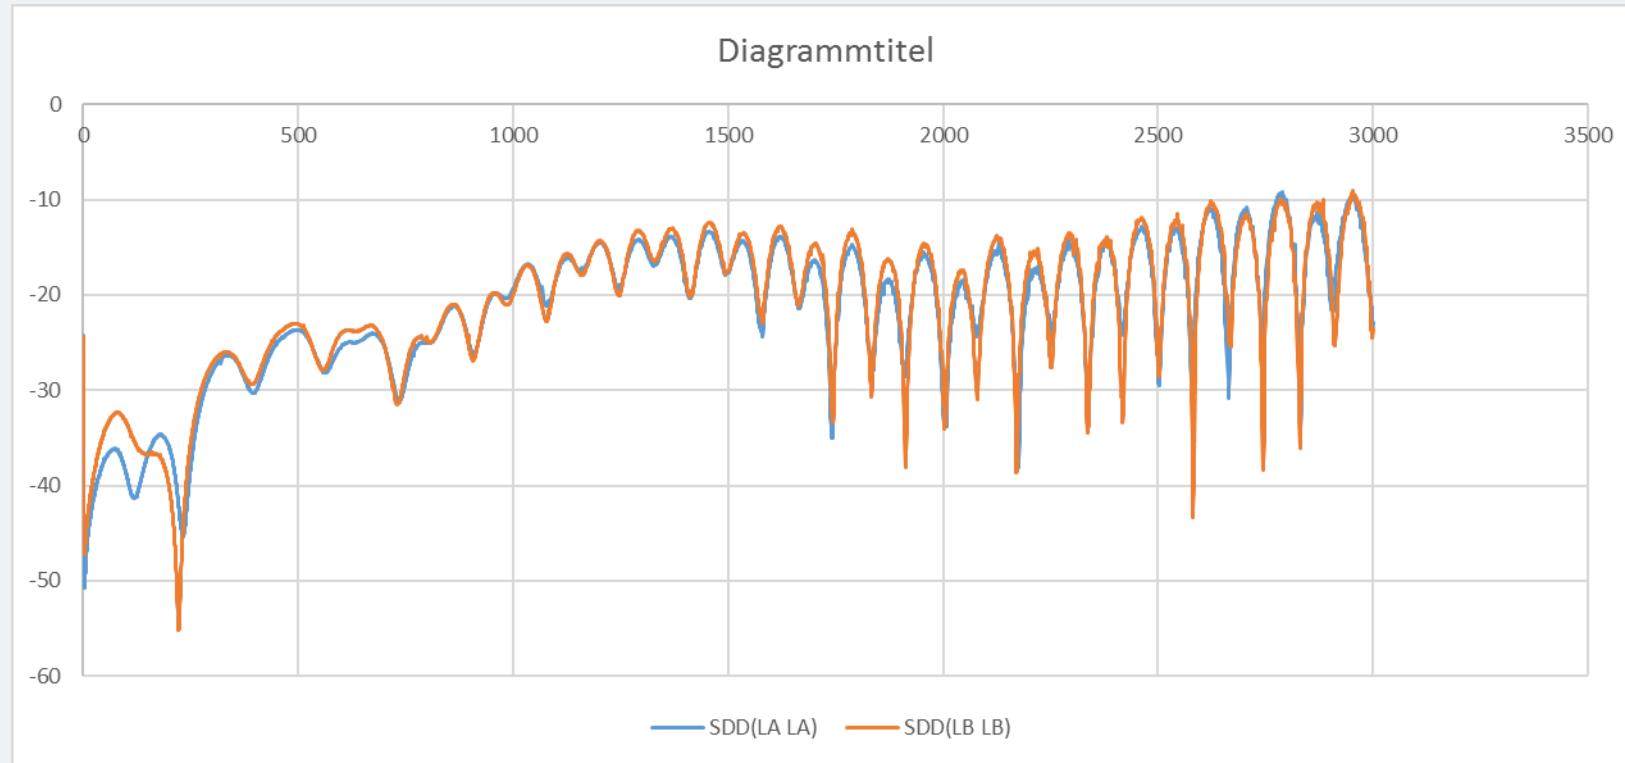

AEM Test

Calibration Insertion Loss THRU LA-LB

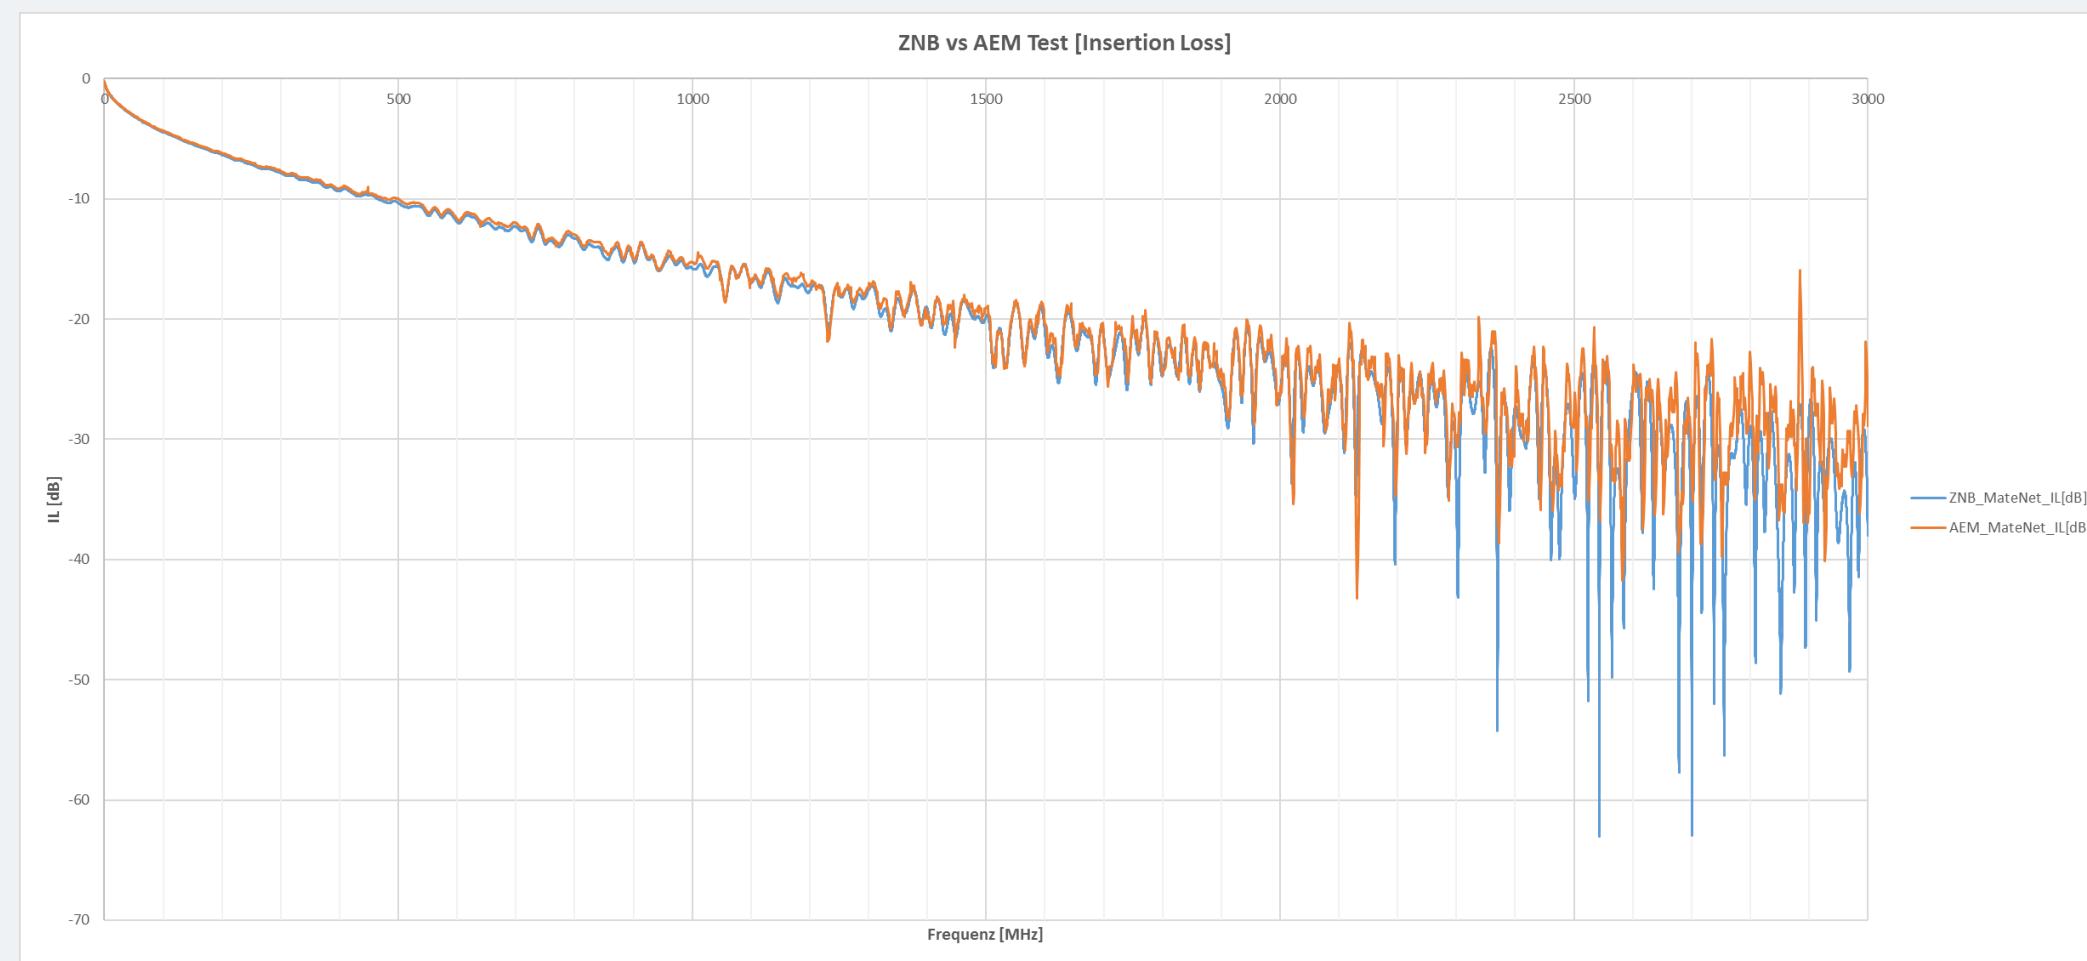

AEM Test

Calibration MATCHED Return Loss

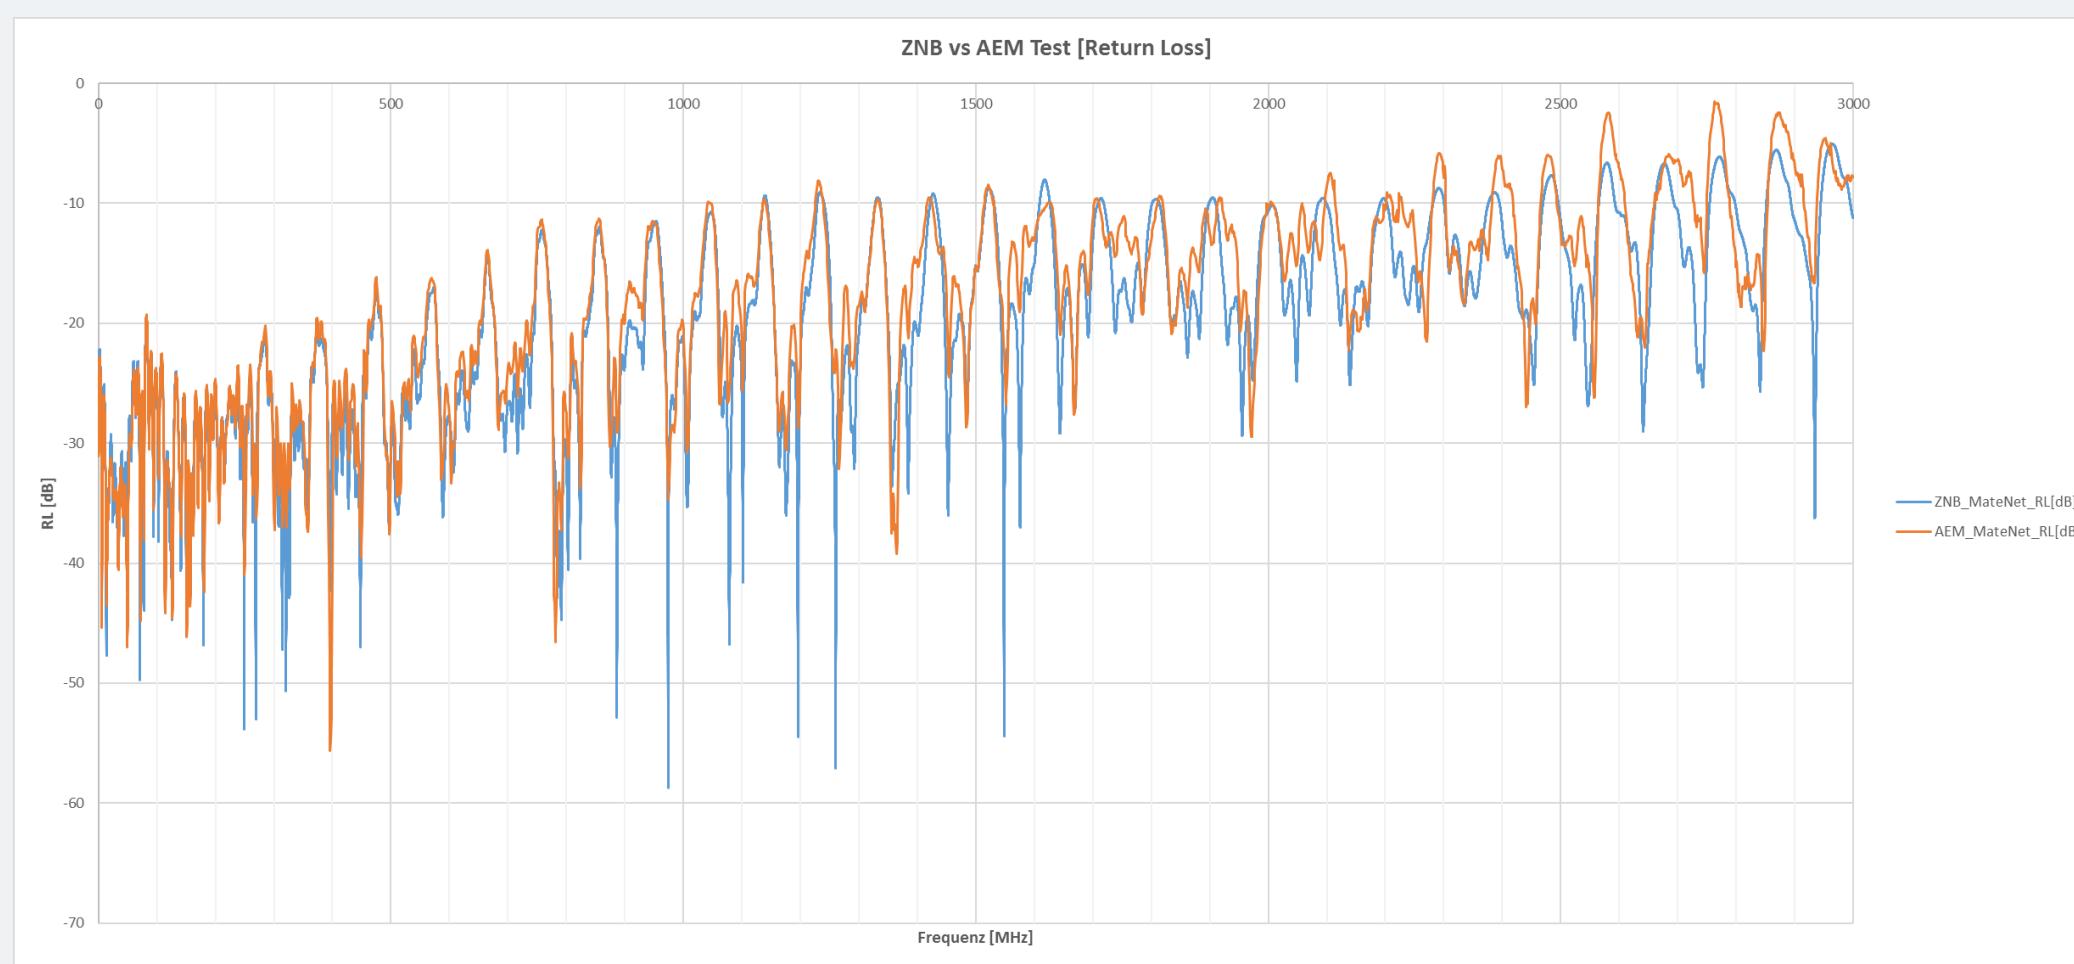

ZNB vs AEM test

Insertion Loss – Sdd21

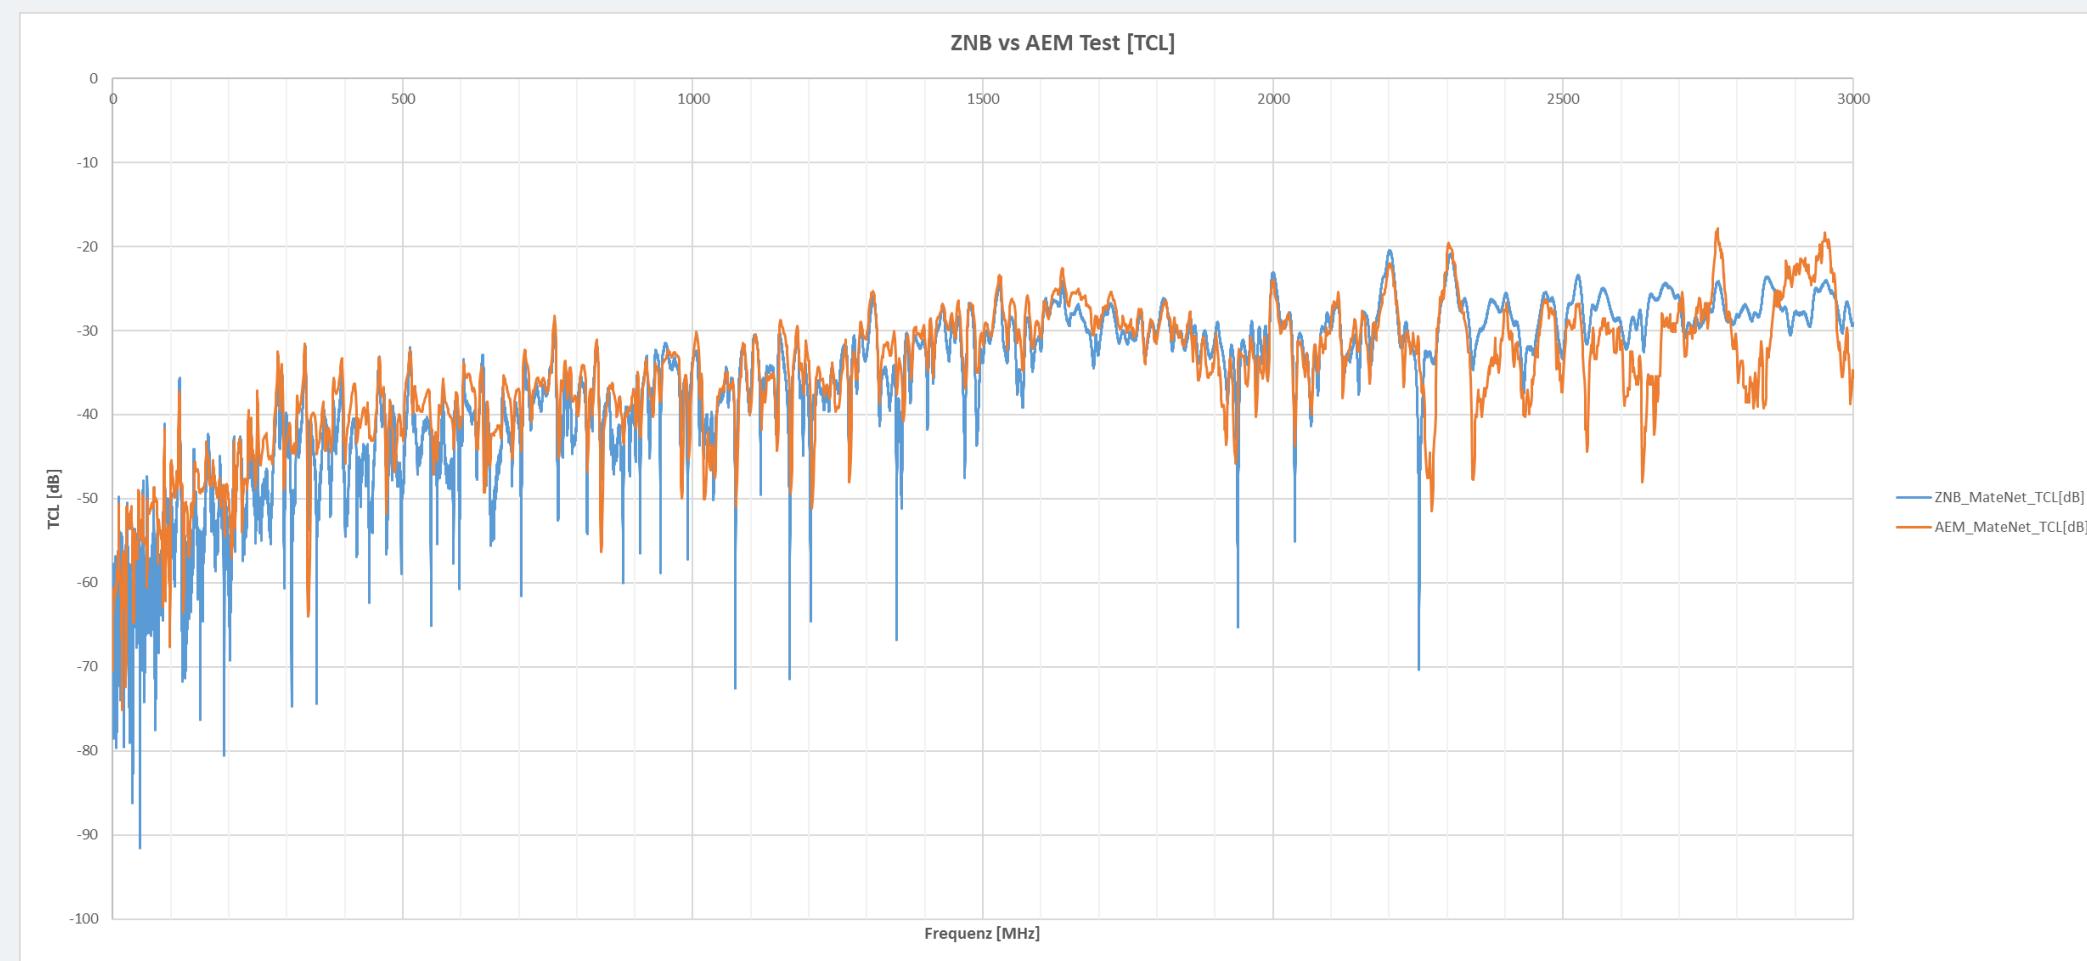

ZNB vs AEM test

Return Loss – Sdd11

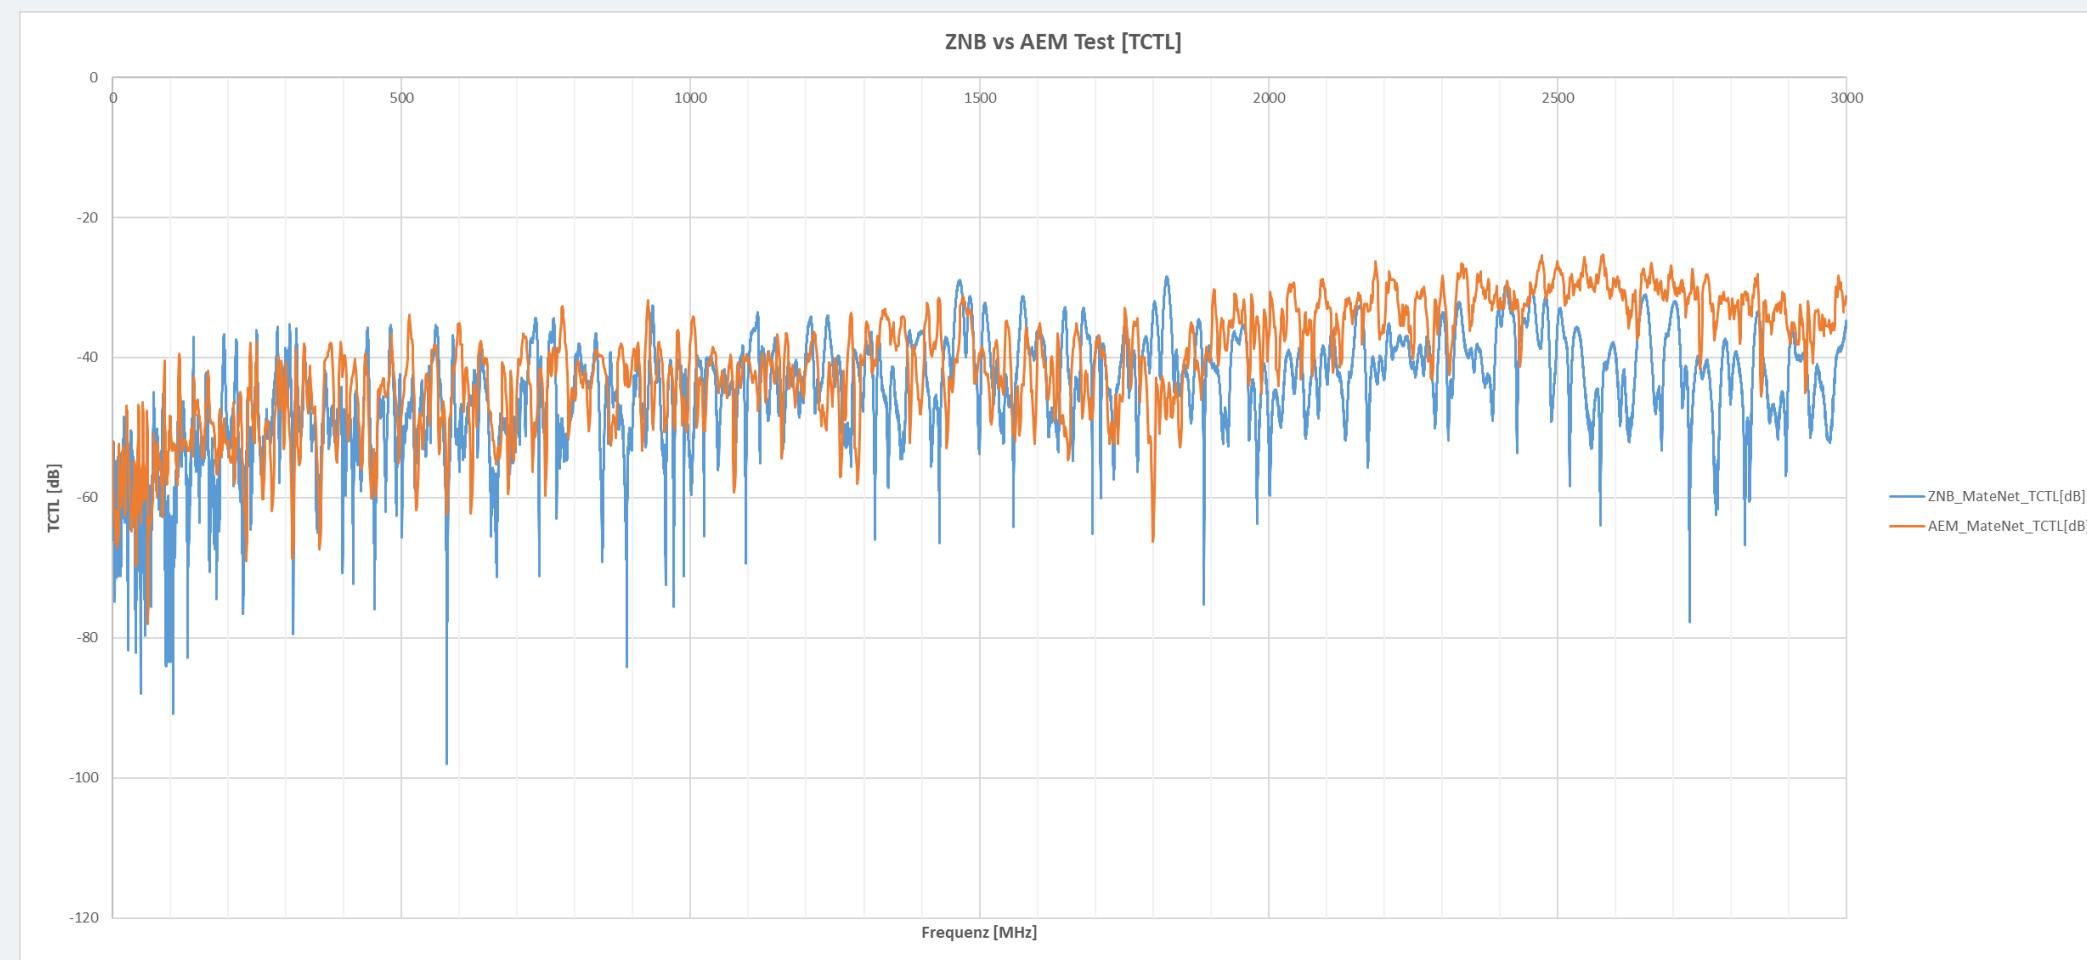

ZNB vs AEM test

TCL – Scd11

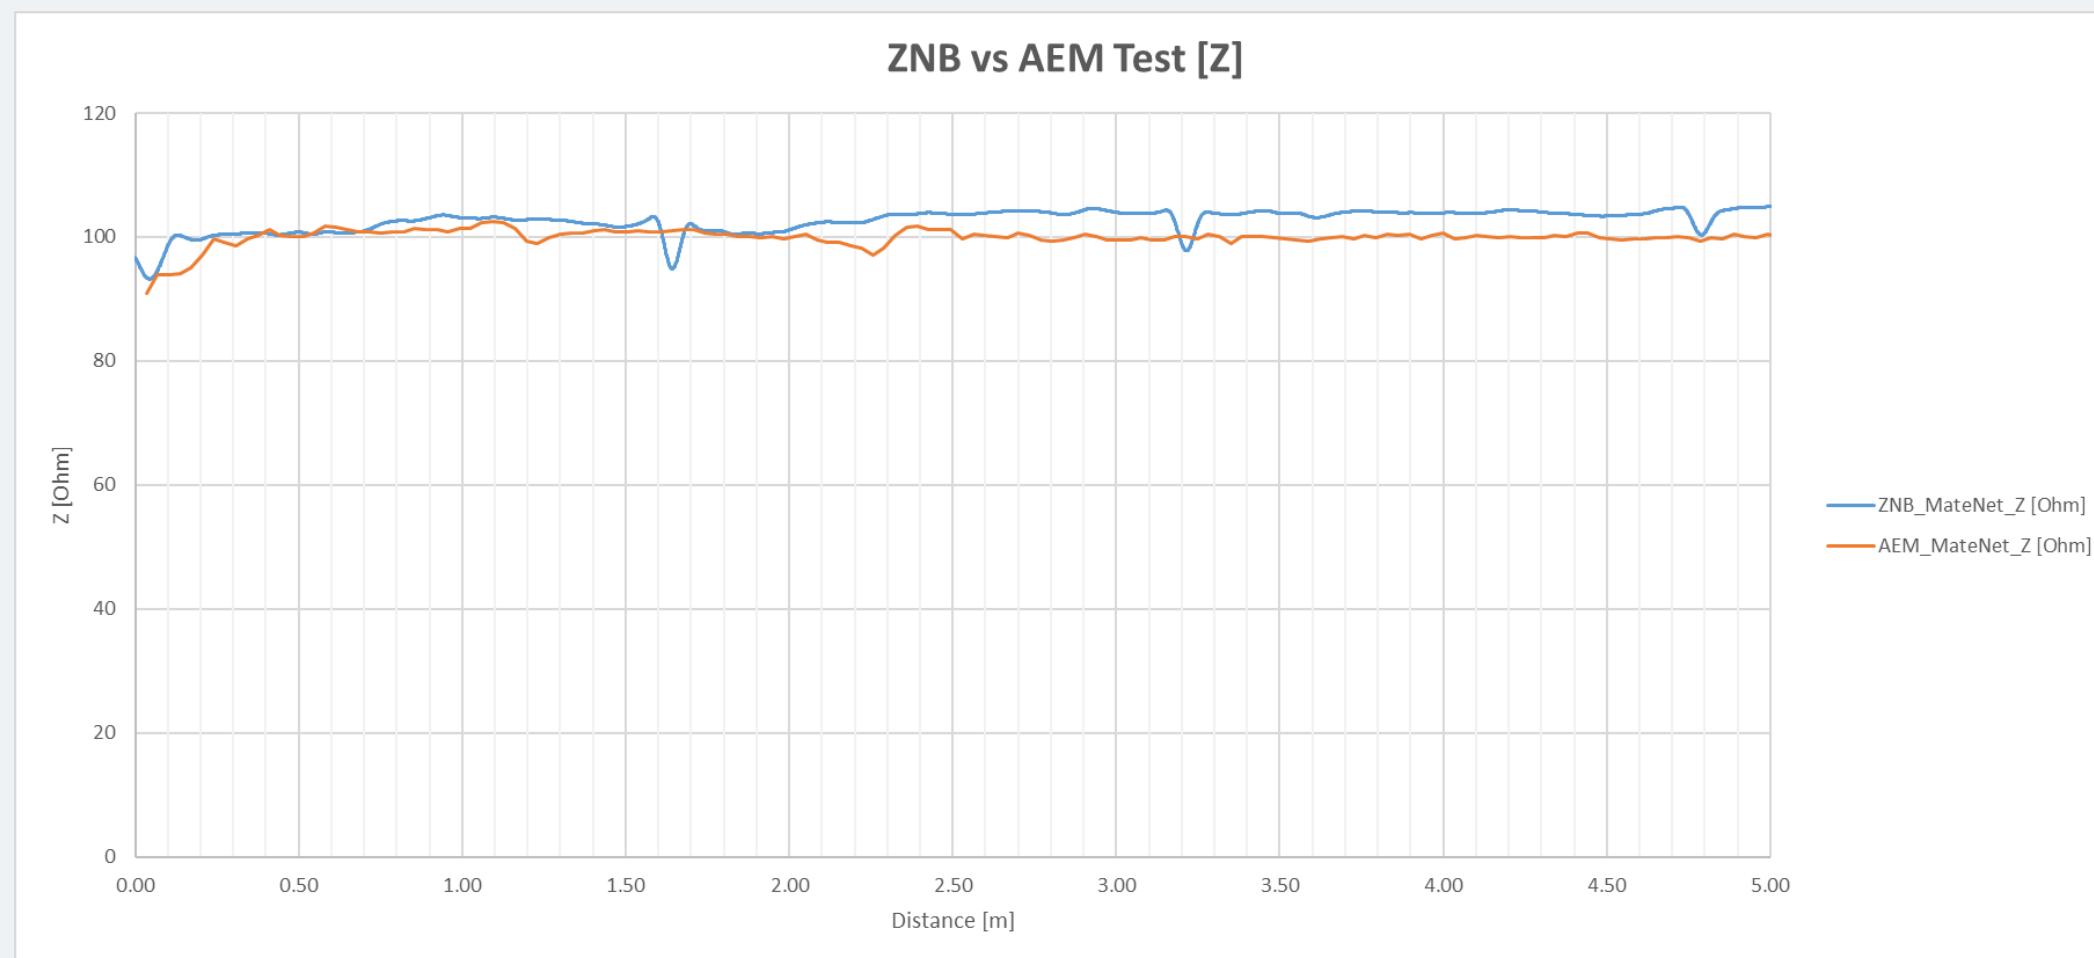

ZNB vs AEM test

TCTL – Scd21

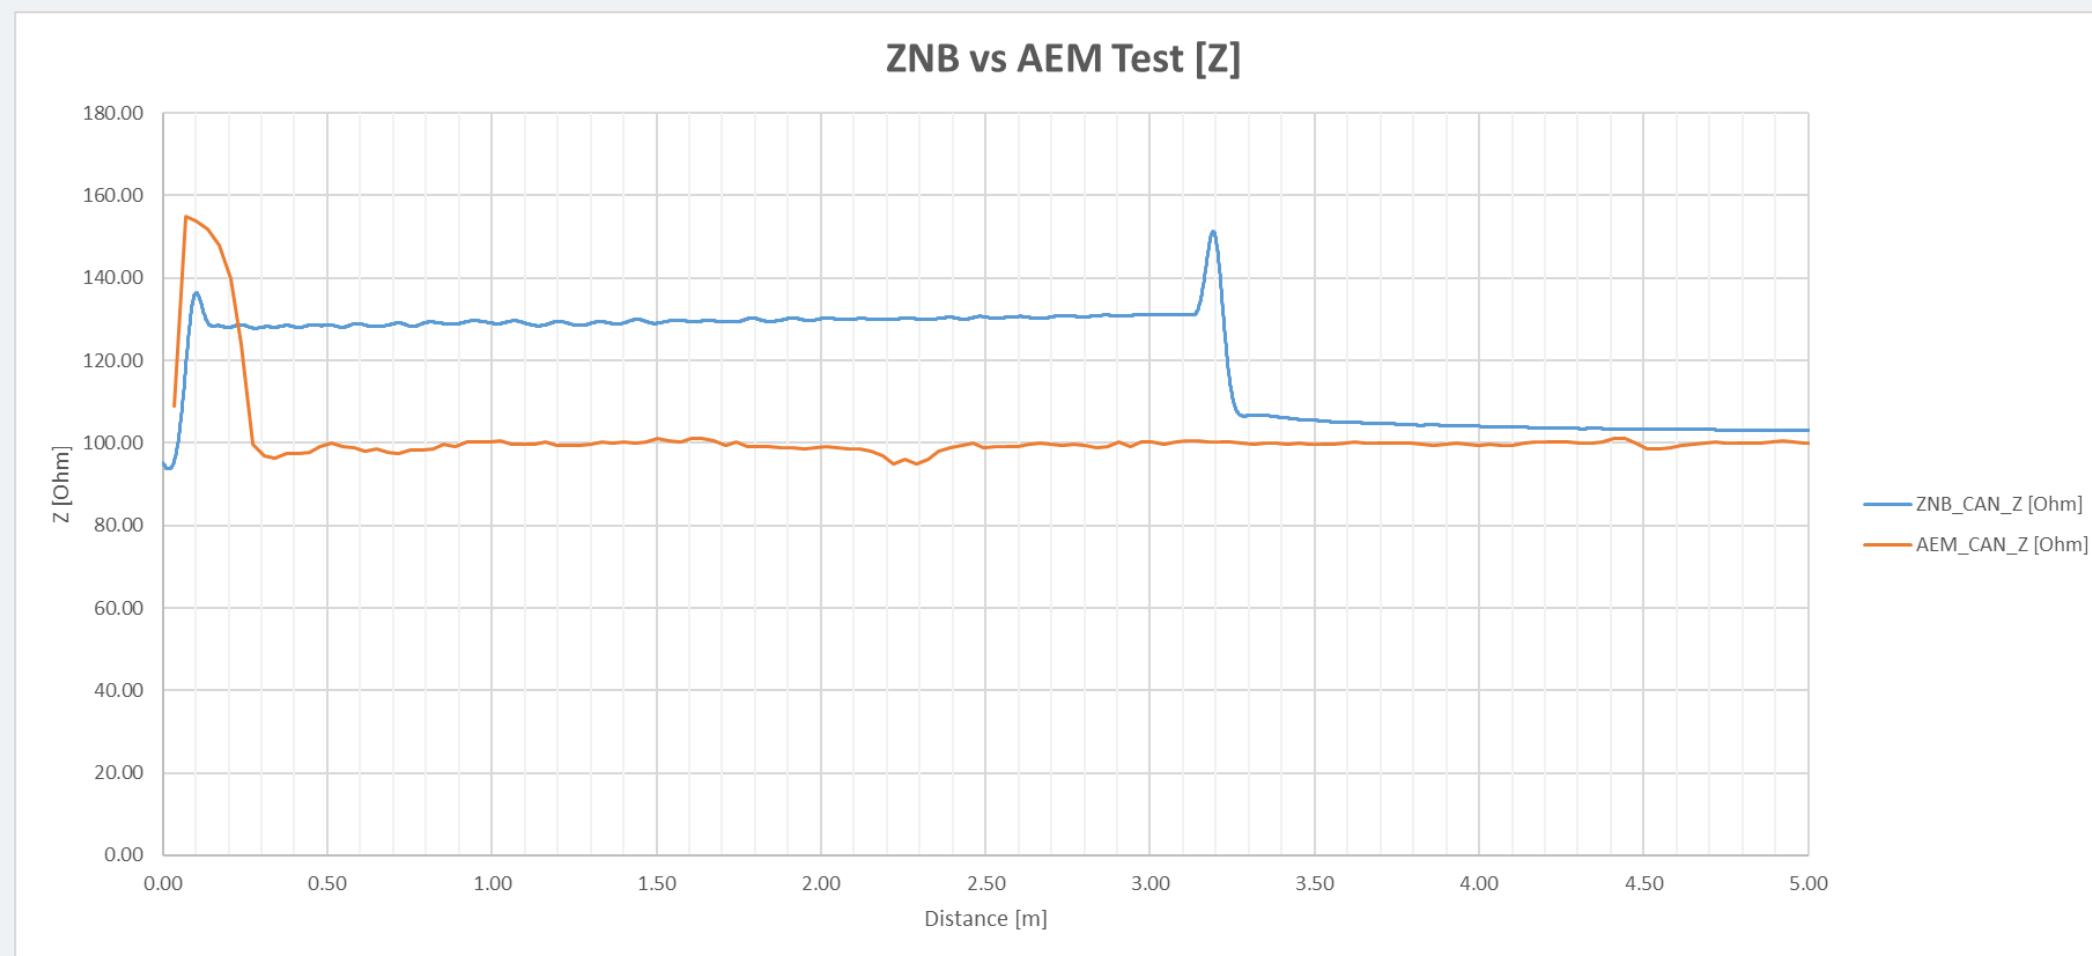

ZNB vs AEM test

Characteristic Impedance – Z (Ethernet Cable)

ZNB vs AEM test

Characteristic Impedance – Z (CAN Cable)

Summary

Results

- › Use-case: Test Automotive Ethernet cable assemblies (un-shielded twisted pairs)
- › Verification of AEM test calibration: Insertion loss of THRU (LA-LB) is not 0dB due to PCB traces on calibration kit PCBs
- › Measurement results very accurate compared to Rhode&Schwarz ZNB8 VNA
- › AEM TDR not representative
