## Data Notes

### Note

The snap-in connectors must be relieved of tensile and transverse forces.  
A surface finish can influence the edge radius of the cutouts.  
This may affect the snap-in socket fit, so ensure an adequate fit before use.  
In addition, the punched edge should be on the inside for punched cutouts.  
The wings of the snap-in connectors must not be mechanically stressed for a long period before use (e.g., due to a pre-locking position).
