- ※ All test data is based on 25 °C ambient.
 - ※ DC current(A) that will cause an approximate $\Delta T 40^{\circ}\text{C}$.
 - ※ DC current(A) that will cause L0 to drop approximately 20% Typ.
 - ※ The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions.
- Circuit design, component, PWB trace size and thickness, airflow and other cooling provision all affect the part temperature. Part temperature should be verified in the den application.
