Http://www.omnivision-group.com

Descriptions

The WS72041 is a single low-voltage operational amplifier with rail-to-rail input/output swing. Ultra low power makes this amplifier ideal for battery-powered and portable applications. The WS72041 has a gain-bandwidth product of 29kHz (TYP) and is unity gain stable. These specifications make this operational amplifier appropriate for low frequency applications, such as battery current monitoring and sensor conditioning.

WS72041 is available with MSL 3 Level in SOT-23-5L and DFN2x2-6 packages. Standard products are Pb-Free and halogen-Free.

Note:

1. Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are only stress ratings, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions are not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. All voltage values, except differential voltage are with respect to network terminal.
3. A heat sink may be required to keep the junction temperature below the absolute maximum.This depends on the power supply voltage and how many amplifiers are shorted.Thermal resistance varies the amount of PC board metal connected to the package.The specified values are for short traces connected to the leads.
