

**Active infrared
(area reflective)
human detection sensor
MA MOTION SENSOR**

Discontinued

Features

- Reliable detection hardly influenced by reflectivity of targeted objects
- Ready-to-use with DC power source (built-in oscillation circuit type)
- Capability to adjoin sensors (External triggering type)
- RoHS compliant

Typical applications

- Equipment around water: automatic lighting of wash-units, toilets, automatic flush
- Stores and financial markets: automatic doors, lighting, ATM, visitor sensors
- Amusement equipment: seating detection for pachinko machines, game displays
- Medical equipment markets: noncontact switches

Product types

● Detection distance type (distance limited)

1) Thin short type (V type)

Standard packing: Carton: 20 pcs.; Case: 200 pcs.

Operating voltage	Output method	Rated detection distance	Built-in oscillation circuit type	External triggering type
			Part No.	Part No.
4.5 V.DC to 5.5 V.DC	NPN open collector output	5 cm 1.969 inch	AMA145905	AMA115905
		10 cm 3.937 inch	AMA1459	AMA1159
		15 cm 5.906 inch	AMA145915	AMA115915
	PNP open collector output	5 cm 1.969 inch	AMA146905	AMA116905
		10 cm 3.937 inch	AMA1469	AMA1169
		15 cm 5.906 inch	AMA146915	AMA116915

Note: If using multiple sensors adjacently or reducing power consumption, contact us for the optimal external trigger type.

2) Short type (H type)

Standard packing: Carton: 20 pcs.; Case: 200 pcs.

Rated operating voltage	Rated detection distance	Mounting direction : H type	
		Short type	
		Built-in oscillation circuit type	External triggering type
		Part No.	Part No.
4.5 V.DC to 5.5 V.DC	5 cm 1.969 inch	AMBA140905	AMBA110905
	6 cm 2.362 inch	AMBA140906	AMBA110906
	7 cm 2.756 inch	AMBA140907	AMBA110907
	8 cm 3.150 inch	AMBA140908	AMBA110908

Rating

● Detection performance

1) Thin short type (Measuring conditions: ambient temp. : 25 °C 77 °F; operating voltage : 5 V.DC)

Items			Unit	Thin short type			Measured conditions
			cm inch	5 1.969	10 3.937	15 3.937	
Rated detection distance	Minimum	mm inch	45 1.772	90 3.543	135 5.315	with a standard reflection board *1	
	Typical		50 1.969	100 3.937	150 5.906		
	Maximum		55 2.165	110 4.331	165 6.496		
Measuring tolerance		Typical	%	10	25	35	Reflection rate: 90 % to 18 %
Usable ambient brightness (Resistance to ambient light) *2	Brightness of sensor surface	Maximum	lx	30,000			See the drawing (Fig. 1) on the Brightness next page.
	Brightness of reflection surface	Maximum		24,000			

Notes : *1. Ambient brightness: 500 lx

*2. Prevent direct light (within 30 ° against the optical axis of the sensor) from entering into the sensor.

Design and specifications are each subject to change without notice. Ask factory for the current technical specifications before purchase and/or use.

Should a safety concern arise regarding this product, please be sure to contact us immediately.

2) Short type (Measuring conditions : ambient temp.: 25 °C 77 °F; operating voltage: 5 V.DC type 5 V.DC, Free-ranging power type 24 V.DC)

Items			Unit	Short type *1						Measured conditions
			cm inch	5 1.969	6 2.362	7 2.756	8 3.150	9 3.543	10 3.937

		Maximum		1260 49.606	1365 53.740	1470 57.874	1575 62.008	1680 66.142	1785 70.275	1890 74.409	1995 78.543	2100 82.677		
Measuring tolerance		Typical	%	5	10				15				Reflection rate: 90 % to 18 %	
Usable ambient brightness (Resistance to ambient light) *	Brightness of sensor surface	Maximum	lx	30,000										See the drawing (Fig. 1) on the next page.
	Brightness of reflection surface	Maximum		24,000										

Notes : * Prevent direct light (within 30 ° against the optical axis of the sensor) from entering into the sensor.

- For thin short type:
Standard reflection board : 150 mm 5.906 inch square area,
90% reflection rate.
- For short type:
Standard reflection board: 100 mm 3.937 inch square area,
90% reflection rate.
- For middle type:
Standard reflection board: 200 mm 7.874 inch square area,
90% reflection rate.
- For long type:
Standard reflection board: 500 mm 19.685 inch square area,
90% reflection rate.

Notes : 1. Detecting an object within the maximum preset detection distance.

$$2. \text{Distance deviation} = \frac{a-b}{a} \times 100 (\%)$$

(a: detection distance of detection target with reflectance of 90 %.
b: detection distance of standard detection target with reflectance of 18 %.)

<Fig. 1>

[Brightness of sensor surface]

Notes : If sunlight or strobe/inverter light (including the regular reflection light from glasses and mirrors) directly enters from the inhibition area, those lights may cause malfunction of the sensor.sensor) from entering into the sensor.

[Brightness of reflection surface]

Absolute maximum rating

- Measuring condition: ambient temp.: 25 °C 77 °F

Items	Absolute maximum rating			
	Built-in oscillation circuit type		External triggering type

			Typical			2.2 mA		5.0 V.DC type: 2.2 mA/Free-ranging type: 3.1 mA		
			Maximum			6.2 mA		5.0 V.DC type: 6.2 mA/Free-ranging type: 7.2 mA		
		Output ON	Minimum		Ic	—				*2 ♣c
			Typical			4.2 mA	8.5 mA	5.0 V.DC type: 2.4 mA/Free-ranging type: 3.3 mA		
			Maximum			8.2 mA	12.5 mA	5.0 V.DC type: 8.2 mA/Free-ranging type: 9.3 mA		
Measuring cycle (Trigger interval)			Typical	Tt		5 ms/cycle				
External trigger	Pulse width	Minimum	Tw	20 μs				Half off the distance period		
		Maximum		1/2 Tt						
	Level	Minimum	V _{TL}	0.8 V				*3		
		Maximum	V _{TH}	3 V						
Response performance: time from trigger pulse fall to detection output			Typical	Tr	5 ms					
Output characteristics	Remain voltage	Minimum	Vr	1.0 V.DC	1.2 V.DC	1.0 V.DC			It=10 mA	
	Leakage current	Maximum	II	5 μA		3 μA			V=30 V.DC	

Notes : *1. The thin short type is only available for 5.0 V.DC.

*2. The ratio between the 4 operating modes (♣a to ♣d) depends on the external trigger period and detector time, and the current consumption corresponds with this varying ratio.

*4. The output transistor is open collector.

The output transistor is turned ON by the sensor detection status and turned OFF by its non-detection status.

*3. A high level is established in the open state due to pull-up by the internal circuit. (Refer to the connector wiring diagram.)

Detection status:
output transistor ON
Non-detection status:
output transistor OFF

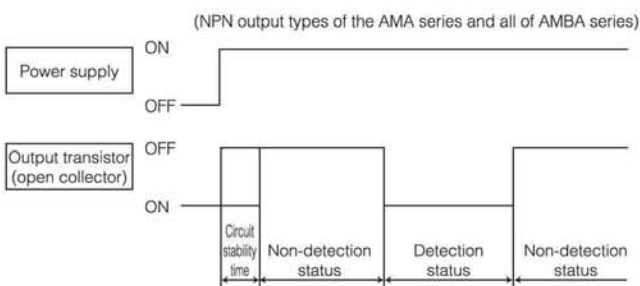

Detection status:
output transistor ON
Non-detection status:
output transistor OFF

Timing chart

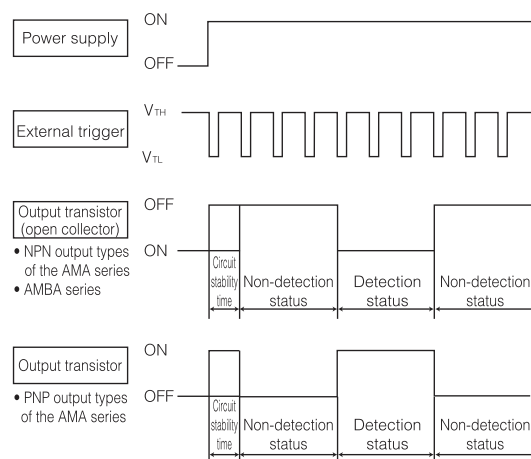

● Built-in oscillation circuit type

Notes : *1. Circuit stability time : Max. 12 ms

*2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

● External triggering type

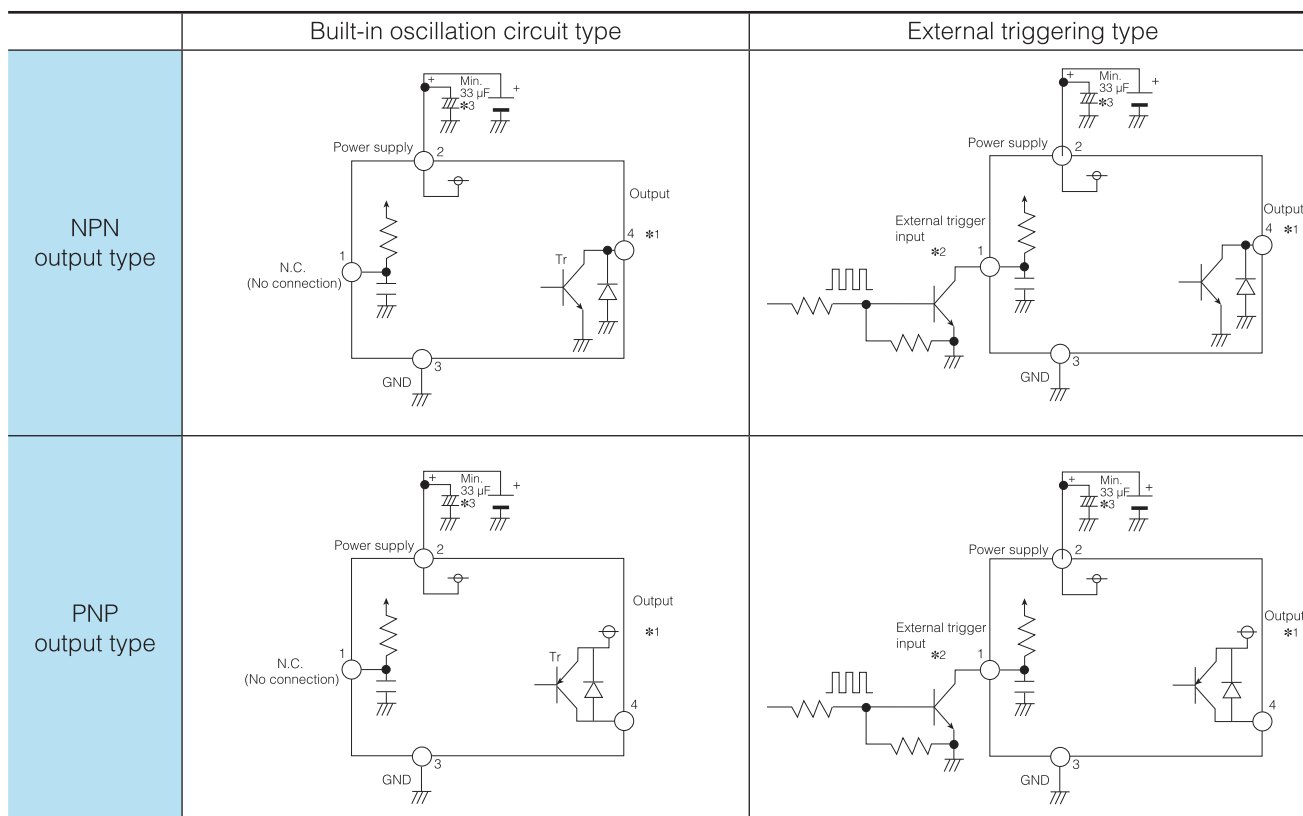

Notes : The sensor recognizes at the $V_{TH} \rightarrow V_{TL}$ edge of an external trigger that the external trigger has been input.

- Notes : *1. Circuit stability time: Max. 12 ms
- *2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status. is not determined by whether the sensor is in the detection status or non-detection status.

How to use

● Wiring diagram of connector

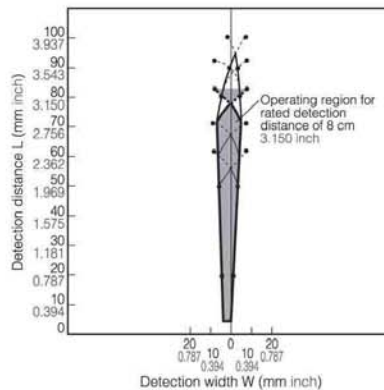

- Notes : *1. The output transistor has an open collector structure.
- Detection status: Output transistor ON (connected to GND)
 - Non-detection status: Output transistor OFF (open state)
- *2. The status of the external trigger input is as follows:
- Open at the high level
 - GND (less than 0.8 V) at the low level
 - Do not apply a high voltage.
- *3. Install capacitor (of 33 μF or over) on the power input terminal of the sensor in order to secure power superimposed noise resistance and stabilize the power supply voltage.

Reference data

● Operating region characteristics

How to interpret the graph

Example: Operating area of the Short Type with rated detection distance of 8 cm 3.150 inch.

Operating area within the dotted lines

Objects that enter the entire area are detected.

Note: If only part of the object is in the detection area, it is not detected.

Operating area within the solid lines

Objects that even partially enter the area are detected.

Guidelines and precautions regarding the technical information and use of our products described in this online catalog.

- If you want to use our products described in this online catalog for applications requiring special qualities or reliability, or for applications where the failure or malfunction of the products may directly jeopardize human life or potentially cause personal injury (e.g. aircraft and aerospace equipment, traffic and transportation equipment, combustion equipment, medical equipment, accident prevention, anti-crime equipment, and/or safety equipment), it is necessary to verify whether the specifications of our products fit to such applications. Please ensure that you will ask and check with our inquiry desk as to whether the specifications of our products fit to such applications use before you use our products.
- The quality and performance of our products as described in this online catalog only apply to our products when used in isolation. Therefore, please ensure you evaluate and verify our products under the specific circumstances in which our products are assembled in your own products and in which our products will actually be used.
- Please ensure the safety by means of protection circuit, redundant circuit etc. in your system design in order to prevent the occurrence of life crisis and other serious damages due to the failure of our products.
- The products and product specifications described in this online catalog are subject to change for improvement without prior notice. Therefore, please be sure to request and confirm the latest product specifications which explain the specifications of our products in detail, before you finalize the design of your applications, purchase, or use our products.
- The technical information in this online catalog provides examples of our products' typical operations and application circuits. We do not guarantee the non-infringement of third party's intellectual property rights and we do not grant any license, right, or interest in our intellectual property.
- If any of our products, product specifications and/or technical information in this online catalog is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially with regard to security and export control, shall be observed.

<Regarding the Certificate of Compliance with the EU RoHS Directive/REACH Regulations>

- The switchover date for compliance with the RoHS Directive/REACH Regulations varies depending on the part number or series of our products.
- When you use the inventory of our products for which it is unclear whether those products are compliant with the RoHS Directive/REACH Regulation, please select "Sales Inquiry" in the website inquiry form and contact us.

Please note that we do not owe any liability and responsibility if our products are used beyond the description of this catalog or without complying with precautions in this catalog.

Notes

■ Use environment

- 1) Avoid use in the steamy or dusty environment, the corrosive gas, an environment where organic solvent can be adhered.
- 2) When using in a high-noise environment, perform countermeasures such as installing capacitor (of 33 μ F or over) on the power input terminal of the sensor. Before use, check the performance under actual use conditions.

■ Wire connection

- 1) Before the power is supplied, recheck wiring as misconnection may damage the internal circuit. (ensure to avoid reverse connection)
- 2) Use wires shorter than 3 m 9.842 ft to protect the internal circuit. Before use, check under actual use conditions if there is no influence by surrounding environments.
- 3) Do not repeatedly attach/detach the connector.

■ Detecting part

- 1) Keep the detecting surface clean. The detecting surface is resistant to trash/ dust, however, if an excessive amount of trash/dust adhere to the surface, it may reduce the margin of detecting distance.
- 2) Dew condensation on the detecting surface may cause malfunction.
- 3) The sensor aims to detect human bodies. If the targeted object has extremely low reflectivity (e.g., objects frosted by black rubbers) or extremely high reflectivity (e.g., objects which regularly reflect: mirrors, glasses or glossy papers), the sensor may not be able to detect or the detecting distance may become unstable.
- 4) The front face of the lense and the case are polycarbonate-based. Generally they are stable against water, alcohol, oil, salt and weak acids. However, avoid alkalis, aromatic hydrocarbons and halogenated hydrocarbons as those substances may expand or melt the lense and the case.
- 5) If placing filters (covers) in front of the sensor and perform detection through the filters, following may occur: detection of the filters (covers), changes of the detecting distance or unstable operations.
- 6) If sensors are in facing positions, light from the opposing sensor may cause mutual interferences and malfunction. Before use, check the installation conditions.
- 7) When arranging multiple sensors in parallel, keep the interval of neighboring sensors as below or over. Before use, ensure that there is no mutual interference.

Part No.	Sensor interval
AMBA1 series	5 cm 1.969 inch
AMA1 series	8 cm 3.150 inch
AMBA2 series	10 cm 3.937 inch
AMBA3 series	20 cm 7.874 inch

■ Recommended mounting direction

As below, install the sensor for the X and Z advancing directions of the targeted object.

For general precautions, see "General precautions for motion sensors" in the next page.

■ Ambient operating conditions

- 1) Temperature: Refer to the absolute maximum ratings for the temperature of each individual sensor.
- 2) Humidity : 15 % to 85 % RH (No freezing nor condensation at low temperature)
- 3) Atmospheric pressure: 86 to 106 kPa
- 4) Because the humidity range differs depending on the ambient temperature, the humidity range indicated below should be used. Continuous operation of the switch is possible within this range, but continuous use near the limit of the range should be avoided. This humidity range does not guarantee permanent performance.

<MA Motion Sensor>

In general, degradation of electronic devices accelerates when they are operated under conditions of high temperature or high humidity. Before use, confirm the reliability of the sensors under the expected operating conditions.

- 5) The sensors do not have a water-proof or dust-proof construction. Depending on the ambient operating conditions, some means of providing protection from water and dust and preventing the formation of ice and condensation must be provided prior to using the sensors. If a sensor is used with a cover installed, the initial detection performance specifications may not be able to be met. Confirm the operation under the actual operating conditions.
- 6) Take care to avoid exposing the sensors to heat, vibration or impact since malfunctioning may result.

■ Concerning external surge voltages

Since the internal circuitry may be destroyed if an external surge voltages is supplied, provide an element which will absorb the surges.

■ Concerning power supplysuperimposed noise

- 1) Use a regulated power supply as the power supply. Otherwise, power supplysuperimposed noise may cause the sensors to malfunction.
- 2) To maintain the power supply noise performance, be certain to connect a capacitor (33 μ F or more) to the sensor power supply input terminal in order to stabilize the power supply voltage.

■ Drop damage

If the sensor is dropped, damage can occur resulting in incorrect operation. If dropped, be sure to do a visual check of the exterior for noticeable damage and check the operation characteristics for faulty operation.

■ Concerning the circuit sides

Since the circuit sides given in this catalog are not protected in terms of circuit design, check out the performance and reliability of the circuits prior to using the sensors.

Safety precautions

Head the following precautions to prevent injury or accidents.

- Do not use these sensors under any circumstances in which the range of their ratings, environment conditions or other specifications are exceeded. Using the sensors in any way which causes their specifications to be exceeded may generate abnormally high levels of heat, emit smoke, etc., resulting in damage to the circuitry and possibly causing an accident.
- Before connecting a connector, check the pin layout by referring to the connector wiring diagram, specifications diagram, etc., and make sure that the connector is connected properly. Take note that mistakes made in connection may cause unforeseen problems in operation, generate abnormally high levels of heat, emit smoke, etc., resulting in damage to the circuitry.
- Do not use any motion sensor which has been disassembled or remodeled.
- Protection circuit recommended The possible failure mode is either open or short of the output transistor. An excess heat is the cause for short mode failure. For any important and serious application in terms of safety, add protection circuit or any other protection method.
