New Lineup

Support for Machine Automation Controller NJ-Series!

Support for open network

The MX2 series/ MX2 series V1 type/
RX series V1 type* can be
connected to DeviceNet by mounting
the Communications Unit.

* Supported for the MX2 series Ver.1.1 or higher.
Not Supported for the RX series without V1 type.

8 types of remote I/O higher functions

8 types of remote I/O functions that
exchange I/O data automatically
without program are provided.
All of the following functions of the inverter
can also be used.

- Simple positioning control
- Torque control
- Setting of acceleration/deceleration time etc.

Parameter Edit via DeviceNet

Parameters of the inverter can be
edited via DeviceNet communication
by using CX-Drive*,
support tool of inverter/servo drive.
No tool switching required.

* Supported for CX-Drive Ver.2.6 or higher.

Linking the World. A Global Open Network Greater Wiring Reduction, Standardization, on a Global Scale.

What Is DeviceNet?

DeviceNet is a field network that easily performs mutual connections between control devices, such as PLCs, computers, and sensors, as well as data devices, such as barcode readers and RFID Systems. DeviceNet is a standardized network that enables intelligent control of field devices and improves system productivity.

Used Worldwide. and IT Technology at Manufacturing Sites

Information

Superior installation performance enables easy and flexible wiring and layout.

DeviceNet covers a wide array of FA applications, ranging from the sensor or device level to the controller level. With its superior installation performance, DeviceNet easily achieves mutual connections between sensors and other control devices in one network as well as reducing costs and shortening lead time in many aspects of manufacturing, ranging from design and manufacture of equipment and lines to installation, operation, and maintenance.

Accelerating the Global Standardizations Required by Industry in This Age of Global Manufacturing

DeviceNet has been the leader in standardization required for this age of borderless manufacturing as a standard for a variety of countries and industrial organizations, such as with standard sensor bus certification by the SEMI industrial association and compliance with IEC, an international global standard. Equipment and lines at manufacturing sites overseas can be constructed and operated in the same way as at sites in Japan without the need for training on wiring rules or detailed explanations.

Support for Creating Maintenance and Safety Systems

Support is provided for creating maintenance systems that provide failure prediction as preventive maintenance to reduce equipment downtime, which is a constant issue at manufacturing sites. [Page F-6](#)
Using DeviceNet lets you create safety control networks and program logic. Monitoring with safety controls makes maintenance easier. [Page F-8](#)

DRT2-series Smart Slaves are Intelligent for Your Networks from Installation

OMRON DRT2-series Smart Slaves decrease total costs and reduce work when used in a variety of manufacturing site applications, such as maintenance and quality control. The Slave Units monitor the network's power supply voltage and communications errors, which can be easily read using Support Software. In addition, the number of ON/OFF operations and total operating time of the devices wired to the slave are counted at the slave, which enables providing notification when maintenance is required.

Machine Operation Monitored by Slaves

Smart Functions

Smart Measuring
The Slave Unit represents machine operating time and operational changes as data, enabling monitoring without increasing the load between controllers.

Smart Counting
By counting the number of ON/OFF operations and the total operating time, the Slave Unit can provide notification when maintenance is required.

Easy-to-view Display

DeviceNet Configurator

Operating time, contact operation counter

Improve Maintenance Efficiency

The Slave can hold comments, allowing quick identification of fault locations and faulty devices.

The diagram shows a slave unit with a unit comment "Cライン検査" and several status icons. A legend on the right explains the symbols: a blue box for unit comment, a green box with a checkmark for confirmation of status with status icon, a red box for operating time monitor error or contact operations error, a yellow box for ON-time monitor error, and a blue box for ON-time power supply voltage monitor error.

Information monitoring for each Slave

The screenshot shows the DeviceNet Configurator software interface with a table titled "Slave List (10 Slave Devices)" showing various slave devices and their status.

Slaves with Powerful Support to Maintenance

DeviceNet™

Using OMRON Temperature Input Terminals for Maintenance

Failure Prediction and Maintenance

If prolonging the time it takes to reach a certain temperature may degrade equipment:

The operating time of a preset temperature range is counted in 1-s units.

The peaks or valleys of temperature inputs that change in a regular pattern are counted to predict when devices operating with severe temperature swings are due for maintenance.

Short Startup

If it takes too long to modify the ladder program on the Master when a Temperature Sensor is replaced:

Slaves internally convert display values to temperature input values so the Controller program no longer has to be modified to perform this task.

Complies with the Highest Safety Standards in the World

The CIP Safety on DeviceNet System conforms to IEC 61508 SIL3 for functional safety, and EN 954-1 Safety Category 4 for machine safety, complying with the world's highest level of safety standards.

IEC 61508 SIL 3

Safety circuits must be able to function to provide safety at anytime. Conversely, the degree of lack of safety is used as the indicator. In IEC 61508, safety is defined as the Probability of Failure per Hour, or PFH. Based on this, the SIL (Safety Level) is classified into four levels. SIL 3 indicates a probability of dangerous failure of once in 1,000 years, which is the highest level in machine safety.

EN 954-1 Safety Category 4

EN standards evaluate the level of machine risk and require the incorporation of risk minimization measures. In EN 954-1, five safety categories have been established, with Safety Category 4 indicating designs that require the highest safety design level. This category is demanded for machines with the highest level of danger, wherein "serious injury (severed limbs, death, etc.) will occur frequently, with little chance of escaping danger." This category demands that a single fault (failure) in any part of the machine, or a series of faults, will not lead to loss of the machine's safety functions.

Safety Control

Through Our High Reliability and Application OMRON Provides a Wide Range of DeviceNet Selection for Your Worksite.

DeviceNet is a global open multi-vendor network that is spreading worldwide.

A wide variety of DeviceNet devices are provided by many vendors.

Having recognized the superior flexibility of DeviceNet for FA and its role as a global standard, OMRON provides a broad lineup of compatible devices.

In the future, OMRON will continue to enhance solutions using DeviceNet while further developing information technology and open networks.

CJ-series DeviceNet Unit

CJ1W-DRM21

A DeviceNet Unit for the NJ/CJ Series

- Allows control of up to 32,000 points (2,000 words) per master, and ensures a high degree of simultaneity between data.
- Can be used as both a master and a slave at the same time.
- Equipped with settings and monitor functions aimed at improving both design and startup efficiency. Achieve maximum performance by using in combination with a Configurator.
- Files of master and slave settings can be uploaded and downloaded using memory cards, allowing effective debugging and easier setup.

*1. Refer to the *DeviceNet Operation Manual* (W267) for the communications power supply specifications.

*2. The Device Unit uses a node, and so connection is possible to 63 slaves only.

*3. When the DeviceNet is used as a slave, "input" and "output" respectively refer to input from the slave to the master and output from the master to the slave.

*4. The maximum message length includes the command code when using the CMND instruction. (SendCmd instruction with NJ-series controller)

Note: When using with the Machine Automation Controller NJ Series, note the following points:

- Simple backup function cannot be used.
- DeviceNet configurator cannot be used. Use CX-Integrator.

General Specifications

The specifications conform to the CJ Series. Refer to the *CJ Series Catalog* (P052) for details on CJ-series specifications.

CJ2 Series Catalog (P059) for details on CJ2-series specifications.

A DeviceNet Unit for the CS Series

- Allows control of up to 32,000 points (2,000 words) per master, and ensures a high degree of simultaneity between data.
- Can be used as both a master and a slave at the same time.
- Equipped with settings and monitor functions aimed at improving both design and startup efficiency. Achieve maximum performance by using in combination with a Configurator.
- Files of master and slave settings can be uploaded and downloaded using memory cards, allowing effective debugging and easier setup.

Ordering Information

Master/Slave Specifications

Communications power supply voltage			11 to 25 VDC *1	
Current consumption			Communications: 30 mA max. Internal circuit: 290 mA max.	
Max. number of connectable slaves			63 *2	
Maximum I/O points	Fixed allocations	When used as a master	2,048 points	
		When used as a slave	32 points	
	User-set allocations	When used as a master	16,000 points	
		When used as a slave	3,200 points	
		When used as a master	32,000 points	
		When used as a slave	4,800 points	
Number of allocated words	Fixed allocations	When used as a master	64 input and 64 output words Software switch/status area: 25 words	
		When used as a slave	input word, 1 output word *3	
	User-set allocations	When used as a master	500 input and 500 output words Software switch/status area: 25 words	
		When used as a slave	100 input and 100 output words *3 Software switch/status area: 25 words	
		When used as a master	500 input words x 2 blocks, 500 output words x 2 blocks Software switch>Status area: 25 words	
		When used as a slave	100 input words x 1 blocks, 100 output words x 2 blocks Software switch>Status area: 25 words	
		When used as a master	542 bytes *4	
Max. number of Units mountable to PLC		Fixed allocations	3	
		User-set allocations	16	
Weight			169 g	

*1. Refer to the *DeviceNet Operation Manual* (W267) for the communications power supply specifications.

*2. The Device Unit uses a node, and so connection is possible to 63 slaves only.

*3. When the DeviceNet is used as a slave, "input" and "output" respectively refer to input from the slave to the master and output from the master to the slave.

*4. The maximum message length includes the command code when using the CMND instruction.

General Specifications

The specifications conform to the CS Series. Refer to the CS Series Catalog (P047) for details on CS-series specifications.

Dimensions

34.5 X 130 X 111.2 mm (W X H X D)

Programmable Controllers NSJ Series

NSJ□-T□□1(B)-G5D**The NSJ-series Controller Completely Integrates a PT and Controller into One Package**

- A PT, Controller CPU Unit, and DeviceNet Master Unit are completely integrated.
- Super space-saving design.
- Easily transfer screens and ladder programming using a commercially available USB cable.
- No cable connections or complicated communications settings required. Start operation simply by turning ON the power supply.
- Equipped with troubleshooter for the Controller and DeviceNet Master as a standard feature.

**Ordering Information****■ Controllers**

Name	Controller Section	Display Section		Ethernet port	Model *
		Display device	Resolution

DeviceNet Master Unit

C200HW-DRM21-V1

Master Unit for CS1, C200HX, C200HG, C200HE, and C200HS

- The control of a maximum of 4,800 points (300 words) per Master is possible over remote I/O with the CS1, C200HX, C200HG, or C200HE.
- The Configurator is available for easy remote I/O allocation.
- The Configurator makes it possible for a single Programmable Controller to connect to up to 16 Master Units.
- Incorporating a remote I/O and message communications functions.

Ordering Information

Compatible PLCs	Max. number of I/O points			Model
	Configurator not in use		Configurator in use	
	No message communications	Message communications		
CS1H/G C200HX/HG/HE	1,600 points (800 inputs/ 800 outputs) (100 words)	Two-block inputs and two-block outputs (with a maximum of 1,600 points or 100 words per block) and a total of 4,800 points or 300 words.	Two-block inputs and two-block outputs (with a maximum of 1,600 points or 100 words per block) and a total of 1,600 points or 100 words.	C200HW-DRM21-V1
C200HS	1,024 points (512 inputs/ 512 outputs) (64 words)	Two-block inputs and two-block outputs (with a maximum of 1,280 points or 80 words per block) and a total of 1,280 points or 80 words.	--	

* The DeviceNet Configurator is required for the Master Unit to be in configuration control.

Unit Specifications

Communications power supply voltage			11 to 25 VDC *1
Current consumption			Communications: 45 mA max. Internal circuit: 250 mA max. at 5 VDC
Max. number of connectable Slaves	Remote I/O (explicit message service)	Configurator not in use	CS1H/CS1G/C200HX/C200HG/C200HE: 50 C200HS: 32
		Configurator in use	63 *2
		FINS message service	8 *3
Number of I/O points	Configurator not in use		CS1H/CS1G/C200HX/C200HG/C200HE: 1,600 points (800 input and 800 output points) C200HS: 1,024 points (512 input and 512 output points)
	Configurator in use		CS1H/CS1G/C200HX/C200HG/C200HE: 4,800 remote I/O points only, and 1,600 points with messages used C200HS: 1,280 points
Number of allocated words	Configurator not in use (fixed allocation)		CS1H/CS1G/C200HX/C200HG/C200HE: 50 input and 50 output words and 10 words for software switch/status area C200HS: 32 input and 32 output words with 10 words for software switch/status area
	Configurator in use (free allocation)		Input x 2 blocks, output x 2 blocks (with a maximum of 100 words per block) *4 Software switch/Status area: 10 words
	Max. message length (for FINS or explicit message)		160 bytes
Max. number of Units mountable to PLC	Configurator not in use		1
	Configurator in use		10 (any C200HS CPU Unit or CS1, or C200HX, C200HG, or C200HE CPU Unit with a maximum of 880 I/O Points)
			16 (any CS1 or C200HX, C200HG, or C200HE CPU Unit with 880 I/O points or more)
Weight			250 g max.

*1. Refer to the *DeviceNet Operation Manual* (W267) for the communications power supply specifications.

*2. The Master Unit uses one node. Therefore 63 Slave Units can be connected.

*3. C200HS Series are not connected.

*4. A maximum of 80 words per block can be used if the Master Unit is mounted to the C200HS Series.

Limitations on Master Unit Installation

With CS1H/G PLCs, make sure that the output area allocated to slaves and the area used for actual I/O (e.g., for Basic I/O Units) do not overlap.

The Master Units for the CS1H/G, C200HX, C200HG, C200HE, and C200HS overlap with the SYSMAC BUS Master Unit in allocated area. Therefore, it will not be possible to mount the DeviceNet Master Unit and SYSMAC BUS Master Unit together to the same PLC unless the Configurator is used.

The Configurator cannot, however, be used with the C200H Series.

General Specifications

The specifications of the Unit are the same as those of the CS1H/G, C200HX, C200HG, C200HE, and C200HS. For specifications of CS1-series and C200HX/HG/HE PCs, refer to the respective catalogs (CS1 Series: P047; C200HX/HG/HE: P036).

Dimensions

35 x 130 x 101 mm (W x H x D)

DeviceNet Board (PCI Board)

3G8F7-DRM21-E

PCI Bus DeviceNet Board

- Perform control using up to 25,200 bytes per master.
Up to 400 bytes of I/O points per slave (Inputs: 200 bytes, Outputs: 200 bytes)
- Master and slave functions are included to enable simultaneous operation.
- DeviceNet Slave Data I/O
I/O can be performed with slaves simply by reading from and writing to the corresponding memory for each slave.
- The Board can be operated in combination with DeviceNet Configurator software and NX-Server Analyzer software.

Ordering Information

Unit	I/O allocation	Model

Smart Slaves DRT2 Series

In addition to the standard control functions, the DRT2-series Smart Slaves can collect a wide variety of manufacturing plant information and serve as key components in maintenance and quality control systems.

DRT2-series Smart Slave Features

The DRT2-series Smart Slaves do not just handle the ON/OFF signals of I/O devices; they can accumulate a variety of information to improve the operating efficiency of the equipment. A maintenance system can be constructed that is separate from the control system. The side-by-side control system/maintenance system configuration allows the existing DeviceNet wiring to be used, reduces the customer's equipment setup time, reduces the downtime in the event of a problem, and provides preventative maintenance capabilities.

Reduce Setup Time	Reduce Downtime	Improve Maintenance
<ul style="list-style-type: none"> Network power supply monitor function Input filter function Power-ON inrush current protection function Communications speed auto-detect function Scaling function User compensation function 	<ul style="list-style-type: none"> Cumulative counter Moving average processing function Number of A/D conversion points (conversion cycle) setting Peak/bottom hold function Top/valley hold function Percentage change calculation function 	<ul style="list-style-type: none"> Unit comments function Connected device comments function I/O power supply monitor function Sensor power supply short-circuit detection function External load short-circuit detection function Disconnected sensor detection function

* The number of contact operations monitor function and the cumulative ON time monitor function cannot be used simultaneously for the same contact.

Configurator (Ver. 2.20 or Later) Maintenance Window

Various equipment information can be monitored from the following Configurator window (Ver. 2.20 or later) through DRT2-series Smart Slaves.

● Maintenance Mode Window

● Individual Slave's Maintenance Information Window

A DRT2-series Smart Slave's maintenance information window can be displayed by double-clicking the Slave's icon if an alarm indicator appears next to the Slave's icon.

Depending on the maintenance information that has been generated, more details can be viewed by clicking the **OUT** tab, **IN** tab, or **Operation Time** tab.

Functions Supported by Smart Slaves

OK: Function supported, ---: Function not supported.

* The operation time monitor can be used with the DRT2-AD04CL(-1).

Notice: The contact operation counter function and the total ON time monitor function cannot be used simultaneously for the same contact.

Smart Slave Functions

● Network Power Voltage Monitor

The present, bottom, and peak values of the Network power voltage can be recorded in the Slave. Also, the monitor voltage can be set using the CX-Integrator to maintain the monitor voltage in the slave (default setting: 14 V), and a Status Area in the Unit will turn ON if the voltage falls below the monitor voltage.

● Unit Conduction Time Monitor

The total ON time of the Slave's internal circuit power can be calculated and recorded. (The CX-Integrator or explicit messages can be used to read the information.) Also, the monitor value can be maintained in the Slave, and a Status Area will turn ON in the Unit when the total time reaches the set value.

● Unit Comment Function

The user can assign and record a name or comment for every Unit (up to 32 characters).

● Connected Device Comment Function

The user can assign a name for each of the Unit's I/O contacts (up to 32 characters) and record it in the Unit. The connected device can be checked for each I/O contact, allowing faulty devices to be identified during remote maintenance.

● Communication Error History Monitor

The error status information (communications error code and communications power voltage when the error occurred) for the last four communications errors that occurred can be recorded in the Slave.

● Last Maintenance Date

This function enables writing to the Unit the date on which maintenance was last performed. This means that the timing for future maintenance can be judged more easily.

● Contact Operation Count Monitor Function

The Contact Operation Counter is used to count the number of times each input or output contact changes from OFF to ON (maximum sampling cycle: 50 Hz) and record the total value calculated in the slave. (The CX-Integrator or explicit messages can be used to read the information.)

The monitor value can be set in the slave, and when the set number of operations is reached, a bit in the Status Area in the Unit will be turned ON. (The CX-Integrator or explicit messages can be used to read the details of the notification.)

- Counted operations: 0 to 4,294,967,295 operations
(Stored data: 0000 0000 to FFFF FFFF hex)
- Counting unit: One operation

Note 1: The Contact Operation Counter and Total ON Time Monitor cannot be used at the same time for the same contact. Select the function to be used under the Detection Mode heading.

Note 2: The Contact Operation Counter will operate only when the I/O power is ON.

● Total ON Time Monitor Function

The total ON time for each I/O contact can be calculated (unit: s) and recorded in the Slave. (The CX-Integrator or explicit messages can be used to read the information.)

The monitor value can be set in the Slave, and when the set total time is reached, a bit in the Status Area in the Unit will be turned ON. (The CX-Integrator or explicit messages can be used to read the details of the notification.)

- Counted time: 0 to 4,294,967,295 seconds
(stored data: 0000 0000 to FFFF FFFF hex)
- Counting unit: One second

Note 1: The Contact Operation Counter and Total ON Time Monitor cannot be used at the same time for the same contact. Select the function to be used under the Detection Mode heading.

2: The Total ON Time Monitor operates only when the I/O power is ON.

3: The Total ON Time Monitor checks approximately every second whether the connected devices are ON.

If the total ON time is calculated for ON times of less than a second, the measurement may not be accurate.

● Input Filter Function

This function can read the input value several times within a preset period and reduce the influence of incorrect signals due to switch chattering or data corrupted by noise. The input filter function can also be used for ON delay operation and OFF delay operation.

● Function to Prevent Incorrect Inputs Caused by Inrush Current when Power Is Turned ON (input only)

The I/O power supply can be monitored to stop any input when the I/O power is OFF and for 100 ms after it is turned ON. This function reduces incorrect inputs caused by inrush current for 100ms after the I/O power is turned ON.

● I/O Power Status Monitor Function

This function is used to detect whether the I/O power is ON.

When the I/O power supply is turned OFF, a bit in the Status Area in the Unit is turned ON. (The CX-Integrator or explicit messages can be used to read the content of the notification.)

Note: The value for detecting a low voltage for the I/O power cannot be set.

● Sensor Power Short-circuit Detection Function (input only)

The sensor power supply current can be monitored, and when the current reaches or exceeds 100 mA per input contact, a sensor power short-circuit is detected.

Check whether a sensor power short-circuit has been detected using the indicators on the slave. When a sensor power short-circuit is detected, a bit in the Status Area in the Unit will turn ON. (The CX-Integrator or explicit messages can be used to read the details of the notification.) The sensor will automatically recover when the cause of the short-circuit is removed, and the power output to the connector where the short-circuit was detected will turn ON.

Note: Use a Power Supply Unit with a rated power supply of 50 W or higher for the communications power supply. A short-circuit is detected when the Unit's sensor power output current reaches or exceeds 100 mA per input connector. When a short-circuit occurs, the communications power supply may be temporarily interrupted. After a short-circuit has been detected, the power will be automatically restored, but during the power interruption use an external circuit in the configuration to make sure the system is operating safely.

Use the following equations to calculate the sensor's current consumption.

- Total network current = Total Unit current consumption + Total sensor current consumption
- Communications power supply capacity \geq (Total network current + Short-circuit detection current) \times (=100 mA) \times (DeviceNet network voltage)

● External Load Short-circuit Detection Function (output only)

The load current of the Output Unit can be monitored, and an external load short-circuit can be detected when the current exceeds a set value per contact (or per common). When an external load short-circuit is detected, the output is turned OFF to prevent damage to the Unit's output circuit. The LED indicators on the Slave Unit can be used to check which contact has been detected as having an external load short-circuit. When an external load short-circuit is detected, a bit in the Status Area in the Unit will turn ON. (The CX-Integrator or explicit messages can be used to read the details of the notification.)

Manual recovery is the only way to remove the cause of the short-circuit.

Note: The OMRON S8□□ Power Supply Unit is recommended for the I/O power supply.

If a Power Supply Unit with a dropping overcurrent protection characteristic is used, the load short-circuit may not be detected. Always use a Power Supply Unit with a rating of 100 W or higher if it uses a dropping overcurrent protection characteristic.

Transistor Remote I/O Terminals

DRT2-□D08(-1)/□D16(-1)**Allows I/O Expansion with Transistor Terminals**

- Wide variety of data, such as maintenance system data, can be collected without affecting the productivity of the control system.
- Valuable information can be collected and managed through the network, including information on the communications power supply voltage levels, Unit wear and tear, and equipment operating information.
- Expansion via Expansion I/O Units
- With no communications baud rate settings required and detachable terminal blocks, maintenance is easier.

**Smart Slave Functions**

Operation time monitor (input and output only) *1	Contact operation counter	Unit conduction time monitor

Expansion Units**XWT-ID08(-1)/OD08(-1)/ID16(-1)/OD16(-1)****Expansion I/O Units make expansion easy!**

One Expansion Unit can be added to each Digital I/O Slave Unit. This makes a variety of I/O combinations possible, such as 16 inputs + 8 outputs, extending the range of possible system configurations.

- Flexible expansion with many different combinations.
- Detachable I/O terminal block enables faster startup time and improved maintainability.
- Collect various preventive maintenance data required to improve productivity, as information on equipment deterioration due to aging and equipment operating time data.

Remote I/O Terminal with Relay Outputs

DRT2-ROS16

A Smart Slave with Relay Outputs and One-step Relay Replacement for Remote Maintenance.

- Capable of handling large-capacity output devices (3 A max.)
- Easy relay replacement.

- I/O expansion possible to transistor I/O devices with terminal blocks (XWT Series).

Smart Slave Functions

Operation time monitor *

Contact operation counter

Unit conduction time monitor

Total ON time monitor

Unit comments

Ambient operating temperature		-10°C to 55°C	
Ambient operating humidity		25 to 85% (with no condensation)	

Item	Model	DRT2-ID16S(-1)	DRT2-MD16S(-1)
Ambient storage temperature	-25°C to 65°C		
Weight	90 g max.		95 g max.

Output Specifications**● Terminals with 8 Inputs and 8 Outputs**

Item	Model	DRT2-MD16S	DRT2-MD16S-1
Internal I/O common	NPN	PNP	
I/O points	8 outputs (8 to 15)		
Rated output current	0.3 A/point, 2.4 A/common	0.3 A/point, 1.6 A/common	
Residual voltage	1.2 VDC max. (0.3 A DC between output and G terminal)	1.2 VDC max. (0.3 A DC between output and V terminal)	
Leakage current	0.1 mA max.		
ON delay time	1.5 ms max.		
OFF delay time	1.5 ms max.		
Number of circuits per common	8 per common		
Load short-circuit detection current	2.4 A min./common	1.6 A min./common	

Input Specifications

● Terminals with 16 Inputs

Item	Model	DRT2-ID16S	DRT2-ID16S-1
Internal I/O common		NPN	PNP
I/O points	16 inputs		
ON voltage	9 VDC min. (between each input terminal and V)	9 VDC min. (between each input terminal and G)	
OFF voltage	5 VDC max. (between each input terminal and V)	5 VDC max. (between each input terminal and G)	
OFF current	1 mA max.		
Input current	11 mA max./point (at 24 VDC) 3.0 mA min./point (at 11 VDC)		
ON delay time	1.5 ms max.		
OFF delay time	1.5 ms max.		
Number of circuits per common	16 per common		
Sensor short-circuit detection current	The total current for all of the following input points is monitored to detect sensor short-circuits. IN0/IN1, IN2/IN3, IN4/IN5, IN6/IN7, IN8/IN9, IN10/IN11, IN12/IN13, IN14/IN15		

● Terminal with 8 Inputs/8 Outputs

Item	Model	DRT2-MD16S	DRT2-MD16S-1
Internal I/O common		NPN	PNP
I/O points	8 inputs (0 to 7)		
ON voltage	9 VDC min. (between each input terminal and V)	9 VDC min. (between each input terminal and G)	
OFF voltage	5 VDC max. (between each input terminal and V)	5 VDC max. (between each input terminal and G)	
OFF current	1 mA max.		
Input current	11 mA max./point (at 24 VDC) 3.0 mA min./point (at 11 VDC)		
ON delay time	1.5 ms max.		
OFF delay time	1.5 ms max.		
Number of circuits per common	8 per common		
Sensor short-circuit detection current	The total current for all of the following input points is monitored to detect sensor short-circuits. IN0/IN1, IN2/IN3, IN4/IN5, IN6/IN7		

Applicable Connectors (sold separately)

● OMRON Connectors

Model	Specifications	Compatible wire size
XN2A-1470	Spring-clamp style	Stranded wire 28 to 20 AWG (0.08 to 0.5 mm ²) wire, 1.5 mm max. outer diameter including insulation

● Tyco Electronics Connectors

Model	Color of housing	Compatible wire size
3-1473562-4	Orange	0.6 to 0.9 mm max. outer diameter including insulation
1-1473562-4	Red	0.9 to 1.0 mm max. outer diameter including insulation
1473562-4	Yellow	1.0 to 1.15 mm max. outer diameter including insulation
2-1473562-4	Blue	1.15 to 1.35 mm max. outer diameter including insulation
4-1473562-4	Green	1.35 to 1.60 mm max. outer diameter including insulation

Wire size: 0.08 to 0.5 mm²

● Sumitomo 3M Connectors

Model	Specifications/color of housing	Compatible wire size
37104-3101-000FL	Red	26 to 24 AWG (0.14 to 0.2 mm ²) wire, 0.8 to 1.0 mm max. outer diameter including insulation
37104-3122-000FL	Yellow	26 to 24 AWG (0.14 to 0.2 mm ²) wire, 1.0 to 1.2 mm max. outer diameter including insulation
37104-3163-000FL	Orange	26 to 24 AWG (0.14 to 0.2 mm ²) wire, 1.2 to 1.6 mm max. outer diameter including insulation
37104-2124-000FL	Green	22 to 20 AWG (0.3 to 0.5 mm ²) wire, 1.0 to 1.2 mm max. outer diameter including insulation
37104-2165-000FL	Blue	22 to 20 AWG (0.3 to 0.5 mm ²) wire, 1.2 to 1.6 mm max. outer diameter including insulation
37104-2206-000FL	Gray	22 to 20 AWG (0.3 to 0.5 mm ²) wire, 1.6 to 2.0 mm max. outer diameter including insulation

General Specifications

Communications power supply voltage	11 to 25 VDC (Supplied from the communications connector.)
Communications power supply current consumption	DRT2-ID32SLH(-1): 65 mA DRT2-OD32SLH(-1): 55 mA DRT2-MD32SLH(-1): 60 mA
Noise immunity	Conforms to IEC61000-4-4, 2 kV (power line)
Vibration resistance	10 to 60 Hz, 0.7-mm double amplitude, 60 to 150 Hz, 50 m/s ² for 80 min each in the X, Y, and Z directions
Shock resistance	150m/s ² , 6 directions, 3 times each
Dielectric strength	500 VAC (between isolated circuits)
Insulation resistance	20 MΩ min. (between isolated circuits)
Ambient operating temperature	-10°C to 55°C
Ambient operating humidity	25% to 85% (with no condensation)
Ambient operating atmosphere	No corrosive gases
Ambient storage temperature	-20°C to 65°C
Mounting method	DIN 35 mm-track mounting
Weight	480 g max.

I/O Specifications

● 16-point Inputs Terminals with Transistors (Input Specifications)

Item	Model	DRT2-ID16SL	DRT2-ID16SL-1	DRT2-ID16SLH	DRT2-ID16SLH-1
Internal I/O common	NPN	PNP		NPN	PNP
Input points	16 inputs				
I/O power supply voltage	20.4 to 26.4 VDC (24 VDC -15%/+10%)				
Input current	24 VDC: 6.0 mA max./point 17 VDC: 3.0 mA max./point				
Input resistance	4 kΩ				
ON delay time	1.5 ms max.				
OFF delay time	1.5 ms max.				
ON voltage	15 VDC min. (between each input terminal and V)	15 VDC min. (between each input terminal and G)	15 VDC min. (between each input terminal and V)	15 VDC min. (between each input terminal and G)	
OFF voltage	5 VDC max. (between each input terminal and V)	5 VDC max. (between each input terminal and G)	5 VDC max. (between each input terminal and V)	5 VDC max. (between each input terminal and G)	
ON current	3.0 mA max.				
OFF current	1.0 mA max.				
Number of circuits per common	16 per common				
Power short-circuit protection	--		Operates at 50 mA/point min.		
Disconnection detection	--		Operates at 0.3 mA/point max.		
Input power supply current	100 mA per point		50 mA per point		

● 32-point Inputs Terminals with Transistors (Input Specifications)

Item	Model	DRT2-ID32SLH	DRT2-ID32SLH-1
Internal I/O common	NPN	PNP	
Input points	32 inputs		
I/O power supply voltage	20.4 to 26.4 VDC (24 VDC -15%/+10%)		
Input current	6.0 mA6.0 mA max. per point at 24 VDC 3.0 mA max. per point at 17 VDC		
Input resistance	4 kΩ		
ON delay time	1.5 ms max.		
OFF delay time	1.5 ms max.		
ON voltage	15 VDC min. (between each input terminal and V)	15 VDC min. (between each input terminal and G)	
OFF voltage	5 VDC max. (between each input terminal and V)	5 VDC max. (between each input terminal and G)	
ON current	3 mA min.		
OFF current	1.0 mA max.		
Number of circuits per common	16 per common		
Power short-circuit protection	Operates at 50 mA/point min.		
Disconnection detection	Operates at 0.3 mA/point max.		

● 16-point Outputs Terminals with Transistors (Output Specifications)

Item	Model	DRT2-OD16SL	DRT2-OD16SL-1	DRT2-OD16SLH	DRT2-OD16SLH-1
Internal I/O common		NPN	PNP	NPN	PNP
I/O points		16 outputs			
I/O power supply voltage		20.4 to 26.4 VDC (24 VDC -15%/+10%)			
Output current		0.5 A per point, 4 A per common			
Residual voltage		1.2 V max.			
Leakage current		0.1 mA max.		0.1 mA max. (See Note: 1.)	
ON delay time		0.5 ms max.			
OFF delay time		1.5 ms max.			
Disconnection detection		--		(See Note: 2.)	
Output power supply current		100 mA per point			
Output for errors		According to hold/clear setting for errors (default: clear)			

Note 1: To enable detection of external load disconnections, a current of 0.1 mA or less is output to the load even when the output is OFF. Make sure that the load will not operate for this current.

Note 2: Disconnection detection can be used when the load current is 3 mA or higher. If the load current is less than 3 mA, disconnections may be falsely detected.

● 32-point Outputs Terminals with Transistors (Output Specifications)

Item	Model	DRT2-OD32SLH	DRT2-OD32SLH-1
Internal I/O common		NPN	PNP
I/O points		32 outputs	
I/O power supply voltage		20.4 to 26.4 VDC (24 VDC -15%/+10%)	
Output current		0.5 A per point, 4 A per common	
Residual voltage		1.2 V max.	
Leakage current		0.1 mA max. (See Note: 1.)	
ON delay time		0.5 ms max.	
OFF delay time		1.5 ms max.	
Disconnection detection		(See Note: 2.)	
Output for errors		According to hold/clear setting for errors (default: clear)	

Note 1: To enable detection of external load disconnections, a current of 0.1 mA or less is output to the load even when the output is OFF. Make sure that the load will not operate for this current.

Note 2: Disconnection detection can be used when the load current is 3 mA or higher. If the load current is less than 3 mA, disconnections may be falsely detected.

● 16-point Inputs/16-point Outputs Terminals with Transistors (Input Specifications)

Item	Model	DRT2-MD32SLH	DRT2-MD32SLH-1
Internal I/O common		NPN	PNP
Input points		16 inputs	
I/O power supply voltage		20.4 to 26.4 VDC (24 VDC -15%/+10%)	
Input current		6.0 mA max. per point at 24 VDC 3.0 mA max. per point at 17 VDC	
Input resistance		4 kΩ	
ON delay time		1.5 ms max.	
OFF delay time		1.5 ms max.	
ON voltage		15 VDC min. (between each input terminal and V)	15 VDC min. (between each input terminal and G)
OFF voltage		5 VDC max. (between each input terminal and V)	5 VDC max. (between each input terminal and G)
ON current		3 mA min.	
OFF current		1.0 mA max.	
Number of circuits per common		16 per common	
Power short-circuit protection		Operates at 50 mA/point min.	
Disconnection detection		Operates at 0.3 mA/point max	

● 16-point Inputs/16-point Outputs Terminals with Transistors (Output Specifications)

Item	Model	DRT2-MD32SLH	DRT2-MD32SLH-1

Environment-resistive Terminals with Transistors (High-function Type)

DRT2-□D08C(-1)/□D16C(-1)

Environment-resistive (IP67) I/O Terminals with Troubleshooting Functions such as Sensor Power Supply Short-circuit Detection

- Equipped with the standard Smart Slave functions that provide powerful preventative maintenance and troubleshooting capabilities.
- High degree of environmental resistance with dust-proof and drip-proof construction.
- Power supply wiring is not required for input devices.
- Connect heavy-load devices (up to 1.5 A).
- Power supply wiring is not required for input devices such as sensors. (Power supply wiring is required for output devices.)
- Detects ground faults or disconnects and notifies the Master.

Smart Slave Functions

Contact operation counter	Unit conduction time monitor	Total ON time monitor	Unit comments
Connected device comments	Network power supply voltage monitor	I/O power supply monitor function (output only)	Communications error log function (output only)
Input filter (input only)	Power-ON inrush current protection (input only)		Sensor power supply short-circuit detection (input only)
Disconnected sensor detection (input only)	External load short-circuit detection (output only)	Communications speed auto-detection	No need to wire Unit power supply
No need to wire input device power supply (input only)	Last maintenance date

Remote I/O Terminals with High Degree of Environmental Resistance (IP67) in Product Lineup Including Economical Input, Output, and Mixed I/O Models

- Common Smart Slave functionality provides strong support for equipment operation status monitoring and effective maintenance.
- High degree of environmental resistance with dust-proof and drip-proof construction. (IP67)
- Models with one connector for two outputs are available to make easier connection with hydraulic valve devices. (Models with 16 outputs and models with 16 mixed I/O)

Smart Slave Functions

Analog I/O Terminals

DRT2-AD04(H)/DA02

Performs Calculations on Analog Values within the Slave Itself. Also Provides High Resolution at 1/30,000 (Full Scale) and Support for a Wide Variety of Data Sampling.

- Equipped with the standard Smart Slave functions that provide powerful preventative maintenance and troubleshooting capabilities.
- Sampling data can be analyzed internally to provide a low-cost scheduler function.
- Equipped with functions such as the scaling function, peak/bottom hold; top/valley hold; comparator function, cumulative counter, and derivative calculation function.
- Two I/O points can be allocated to any two of the following values: analog input, peak/bottom, top, valley, or rate-of-change. Values without an allocated I/O point can be read with message communications.

Smart Slave Functions

Unit conduction time monitor	Unit comments	Connected device comments	Network power supply voltage monitor
Communications error log function	Removable terminal block	Automatic baud rate detection. No wiring required.	No need to wire Unit power supply
Scaling	User calibration	Last maintenance date	Integration
Moving averaging (inputs only)	Peak/bottom hold	Top/valley hold	Rate of change calculation
Comparator	AD conversion points (conversion cycle) setting (inputs only)	Error output value setting (outputs only)	

Ordering Information

Note: The voltage and current output ranges (signals) are set with either the DIP switch or the Configurator settings.

Temperature Input Terminals

DRT2-TS04□

Temperature Input Terminal with Smart Functionality

- The Temperature Input Terminal can be used with almost the same functionality as a Analog Input Terminal, such as with scaling and comparator functions.
- Enhanced performance is provided with functionality specific to the Temperature Input Terminal, such as the recording the operating time in a preset temperature range and temperature difference detection between input channels.

Smart Slave Functions

Unit conduction time monitor	Unit comments	Connected device comments	Network power supply voltage monitor
Communications error log function	Removable terminal block	Communications speed auto-detection	No need to wire Unit power supply

Insulation method		Between input and communication lines: Photocoupler insulation Between temperature input signals: Photocoupler insulation															

*1. A current of 0.35 mA flows to sensors connected to the DRT2-TS04P.

*2. The indicator accuracy specifications differ depending on the mounting direction. Refer to the above table for details.

● Indicator accuracy when only the Unit or the Terminal Block is replaced

In the DRT2-TS04T, a cold junction compensator is included in the Terminal Block. The indicator accuracy will be reduced depending on the mounting direction if only the Terminal Unit is replaced and the Lot No. and serial No. of the Terminal Block and Terminal Unit do not match. The Lot No. and serial No. of the Terminal Block and Terminal Unit can be found on the labels affixed to the products as shown below.

Terminal Unit Label

Remove the terminal block. The label is affixed to the top of the unit.

Terminal Block Label

The label is affixed to the left side of the terminal block.

If the Lot No. and serial No. of the terminal block and Unit are the same, basic performance specifications apply regardless of the mounting direction. If the numbers are different, the following indication accuracies apply.

Mounting direction	Indication accuracies	
Mounted normally (1)	As specified in the Performance Specifications.	
	($\pm 0.3\%$ of indication value or $\pm 2^\circ\text{C}$, whichever is greater) ± 1 digit max.	
	Input type	Indication accuracies
	K1, K2, T, and N below -100°C	$\pm 3^\circ\text{C} \pm 1$ digit max.
	U, L1, and L2	$\pm 3^\circ\text{C} \pm 1$ digit max.
	R and S below 200°C	$\pm 4^\circ\text{C} \pm 1$ digit max.
	B below 400°C	Not specified.
	W	$\pm 0.3\%$ of indication value or $\pm 4^\circ\text{C}$ (whichever is larger) ± 1 digit max.
	PLII	$\pm 0.3\%$ of indication value or $\pm 3^\circ\text{C}$ (whichever is larger) ± 1 digit max.

SmartSlice GRT1 Series

DeviceNet-compliant Building-block I/O Terminals to Save Space, Cut Costs, and Reduce Work.

What Is the SmartSlice GRT1 Series?

This SmartSlice GRT1 Series consists of building-block I/O Terminals that enable building flexible systems to match the customer's applications with features such as I/O expansion using small numbers of points.

Easily save space and reduce costs.

Required number of points	Number of redundant points	
	Previous slaves	SmartSlice
Inputs	20	12
Outputs	10	6
Analog inputs	2	2
Number of nodes	4	1

One-touch Wiring

The terminal block with screwless clamp terminals greatly reduces work. Also, additional tightening is not required because vibration does not cause loosening.

Also Save Space in the Control Panel

V and G terminals are provided for each input signal. Relay terminals are no longer required, which helps save space in the control panel.

Terminal Arrangement

Set Only the Node Addresses

Automatic baud rate detection and automatic I/O allocations enable immediate use with no Support Software.

Online replacement makes maintenance easy

The terminal block, main block, and power supply block of the I/O Unit are detachable.

Replacement can be performed online without changing the I/O wiring and while maintaining communications for the remaining Units.

This is ideal for applications such as furnaces, where heaters must be remain turned ON as much as possible.

I/O Allocation Software Settings

- This function enables registering the I/O configuration data of a non-mounted SmartSlice I/O Unit as a dummy.
- Securing the required capacity for expansion in the I/O map in advance when I/O Units must be added in the future prevents discrepancies in the I/O map when actual expansion is performed and eliminates the need for significant changes in programming.

Equipped with Smart Functions

The highly acclaimed Smart Functions of the DRT2 Series are used.

This helps monitor the operation status of the equipment and improves capacity utilization.

Smart Timing

The Slave Unit stores the equipment operating time and amount of change in operation as data to enable monitoring without increasing the load between Controllers.

Smart Counting

The number of ON/OFF operations of the equipment and the total operating time are counted by the Slave Unit to provide notification when maintenance is required.

Recover Unit Parameters without Support Software

Unit data can be backed up by manipulating a DIP switch. Automatically restoring data after Unit replacement improves maintenance efficiency.

Support for flexible I/O configurations to match the application help downsize the control panel, cut costs, and decrease wiring work.

System Configuration

Internal Circuit Configuration

DeviceNet Communications Unit

GRT1-DRT

DeviceNet-compliant Interface Unit with up to 1,024 I/O Points at One Node

- Connect up to 64 SmartSlice I/O Units.
- Consolidate a large capacity of I/O points into one Slave (up to 1,024 I/O points).
- Save space by configuring different I/O types using one Slave Unit.
- Easily get the system started simply by setting the node addresses.
- Replace SmartSlice I/O Units online while maintaining communications. This helps minimize equipment downtime.
- Smart functions for monitoring equipment operating status. This helps improve preventive maintenance and the utilization rate.
- Registering SmartSlice I/O for planned future expansion decreases design work when changes are made. (Supported for unit version 2.0 or higher.)

Ordering Information

Name	Specifications	Model
DeviceNet Communications Unit	Up to 64 Slice I/O Units can be connected. (1,024 I/O points max.)	GRT1-DRT

General Specifications

Item	Model	GRT1-DRT
Network power supply voltage	11 to 25 V DC (Supplied from the communications connector)	
Unit power supply voltage	20.4 to 26.4 VDC (24 VDC -15%/+10%)	
I/O power supply voltage	20.4 to 26.4 VDC * (24 V +10%/-15%)	
Noise immunity	Conforms to IEC 61000-4-4, 2 kV (power line)	
Vibration resistance	10 to 60 Hz, 0.7-mm double amplitude 60 to 150 Hz: 50 m/s ²	
Shock resistance	150 m/s ²	
Dielectric strength	500 V AC between isolated circuits	
Insulation resistance	20 MΩ min. between isolated circuits	
Ambient operating temperature	-10°C to 55°C (with no icing or condensation)	
Ambient operating humidity	25% to 85%	
Ambient operating atmosphere	No corrosive gases	
Ambient storage temperature	-25°C to 65°C (with no icing or condensation)	
Mounting method	DIN 35 mm-track mounting	

* For power supply input to the Slice I/O Units.

DeviceNet Communications Unit Specifications

Item	Model	GRT1-DRT
I/O points	1,024 max. (128 bytes), including inputs and outputs	
Connectable Slice I/O Units	64 max.	
Communications with Slice I/O Units	64 Units max. in a horizontal connection configuration (for an extension of approx. 2 m max.) Power consumption is limited to 80 W per block, and the extension must be done using Turnback Cables (two 1-m cables max., for a distance of 2 m max.)	
Slice I/O Unit data capacity	(1) 0, 2, or 4 bits (2) 0 to 16 words (in word increments)	
Status flags	One word is allocated (Communications Unit Status Flags)	
Parameter back-up and restore functions	2 KB of data can be backed up and restored per Unit	
Message communications function	Supported	
Automatic baud rate detection	Supported	
Connector	1 DeviceNet open connector with screws Connectable with multi-drop connector	
Terminals	2 terminals for I/O power supply, 2 terminals for Unit power supply	
Power supply per 1 block	80 W max. (Unit power supply)	
I/O power supply consumption current	4 A max.	
Weight	137 g

MULTIPLE I/O TERMINAL Series

A MULTIPLE I/O TERMINAL with a flexible combination of numerous versatile I/O Units handles digital I/O, analog I/O, counter inputs, or relay outputs and boosts on-site productivity higher than ever. Using a MULTIPLE I/O TERMINAL, one Slave (Communications Unit) can connect to a maximum of eight I/O Units to achieve control of a maximum of 1,024 I/O points. (see Note below.)

MULTIPLE I/O TERMINAL Configuration Example

* By using the DeviceNet Configurator (sold separately), control can be performed for up to 32,000 points for CJ1W-DRM21 and CS1W-DRM21-V1 DeviceNet Units, and 4,800 points for C200HX/HG/HE Master Units.

Note: The number of I/O points under control may be restricted by the application. Refer to the *DeviceNet MULTIPLE I/O TERMINAL Operation Manual (W348)* for details.

Communications Unit

DRT1-COM

Connects to a Total Maximum of Eight Digital I/O, Analog I/O, and Relay Output Units Compatible with MULTIPLE I/O TERMINAL.

- Allows flexible combinations of I/O points.
- Covering a total cable length of 3 m.
- DIN track mounting.

	Digital output	NPN (- common)			0.5 A, DC/transistor	GT1-OD32ML	
		PNP (+ common)				GT1-OD32ML-1	

General Specifications

I/O power supply voltage	20.4 to 26.4 VDC (24 VDC -15%/+10%)		
Current consumption *	Model	I/O Interface	Internal circuit
	GT1-ID16(-1)	35 mA max.	--
	GT1-OD16(-1)	35 mA max.	9 mA max.
	GT1-ID16MX(-1)	35 mA max.	--
	GT1-OD16MX(-1)	35 mA max.	9 mA max.
	GT1-ID16ML(-1)	35 mA max.	--
	GT1-OD16ML(-1)	35 mA max.	9 mA max.
	GT1-ID16DS(-1)	35 mA max.	--
	GT1-OD16DS(-1)	35 mA max.	9 mA max.
	GT1-ID32ML(-1)	55 mA max.	--
	GT1-OD32ML(-1)	65 mA max.	11 mA max.
Dielectric strength	500 VAC		
Noise immunity	Conforms to IEC61000-4-4 2 kV (power line)		
Vibration resistance	10 to 150 Hz, 1.0-mm double amplitude or 70 m/s ²		
Shock resistance	200 m/s ²		
Mounting method	DIN 35 mm-track mounting		
Mounting strength	No damage when 100 N pull load was applied in all directions (10 N min. in the DIN track direction)		
Terminal strength	No damage when 100 N pull load was applied		
Screw tightening torque	0.3 to 0.5 N·m		
Ambient operating temperature	-10°C to 55°C (with no icing or condensation)		
Ambient operating humidity	25% to 85% (with no icing or condensation)		
Ambient storage temperature	-25°C to 65°C		
Accessories	I/O Unit Connecting Cable (40 mm)		

* The above current consumption is a value with all 16 and 32 points turned ON excluding the current consumption of the external sensor connected to the Input Unit and the current consumption of the load connected to the Output Unit.

Input Specifications

Item	Model	GT1-ID□□
ON delay	1.5 ms max.	
OFF delay	1.5 ms max.	
ON voltage	15 V min. (between each input terminal and V or G)	
OFF voltage	5 V max. (between each input terminal and V or G)	
OFF current	1 mA max.	
Insulation method	Photocoupler	
Input indicators	LED (yellow)	

Output Specifications

Item	Model	GT1-OD□□
Rated output current	0.5 A/point *	
ON delay	0.5 ms max.	
OFF delay	1.0 ms max.	
Residual voltage	1.2 V max.	
Leakage current	0.1 mA max.	
Insulation method	Photocoupler	
Output indicators	LED (yellow)	

* Ensure that the total external load current does not exceed the values given in the following table.

Model	Total external load current
GT1-OD16/16MX/32ML(-1)	4 A
GT1-OD16ML/16DS(-1)	2.5 A

Applicable Connectors

Note: Refer to page 150 for Peripheral Devices.

Cables for I/O Connector

Cables for Connector Terminal Conversion Units (16 Points)

Analog I/O Units

GT1-AD/DA

Analog Input/Output Units Compatible with MULTIPLE I/O TERMINAL

- Input block incorporates connectors that can be easily mounted or dismounted. (GT1-AD08MX, GT1-DA04MX)
- 8 or 4 inputs.
- 4 outputs.
- High resolution of 1/6,000.
- High conversion speed of 8 ms/8 points or 4 ms/4 points.
- DIN track mounting.

Connector model

Temperature Input Units

GT1-TS04□

Temperature Input Units for use with MULTIPLE I/O TERMINAL

- Four inputs.
- Thermocouples and platinum resistance thermometer models are available.
- Conversion time is only 250 ms for 4 inputs.
- The Configurator can be used to calibrate temperatures.
- The circuit section can be removed, so rewiring isn't required during maintenance.
- DIN track mounting.

Counter Unit

GT1-CT01

A Counter Unit Supporting Encoder Input for Use with MULTIPLE I/O TERMINAL

- High-speed pulse with counting speed of 50 kHz.
- Counting can be set to a multiplication factor of 1 or 4.
- Wide range of measurement: -8,388,608 to 8,388,607.
- One external input and two external outputs are available.
- DIN track mounting.

Ordering Information

I/O classification	External I/O points	I/O connections	Operating mode	Model
Counter Unit	Inputs: 1 Outputs: 2	Terminal block	Linear counter	GT1-CT01

General Specifications

I/O power supply voltage	20.4 to 26.4 VDC (24 VDC -15%/+10%)
Current consumption	90 mA max.
Connection distance	Total length: 3 m Maximum length between Units: 1 m
Ambient operating temperature	-10°C to 55°C
Ambient operating humidity	25% to 85% (with no condensation)
Weight	Approx. 250 g
Dimensions	110 x 60 x 65 mm (W x H x D)
Accessories	I/O Unit Connecting Cable (40 mm)

Output Specifications

Output current	0.5 A per point max.
Residual voltage	1.2 V max. (0.5 A DC between each output terminal and G)
Leakage current	0.1 mA max. (24 VDC between each output terminal and G)
ON delay time	0.5 ms max.
OFF delay time	1.5 ms max.

C200HW-DRT21	

Programmable Slaves

CPM2C-S1□0C-DRT

Slaves with the Complex Functionality Needed for Distributed Blocks

Programmable Slaves combine devices, such as sensors and actuators, into one functional unit that is treated as a DeviceNet slave.

Programmable Slaves greatly facilitate device distribution and functional organization.

They help standardize programming between units and reduce the amount of programming required at the master.

I/O and operational checks can be performed for each functional unit, rather than waiting for final system assembly, as with conventional distributed I/O systems.

- A Programmable Slave can be programmed from a CX-Programmer up to 3 network levels away. (Includes the DeviceNet network itself. Possible only with CX-Programmer Ver. 2.1 or later and a Programmable Slave Ver. 1.04 or later.)

- DeviceNet Slave Functions

Multiword I/O links and explicit messages are used to control slaves from the master. Log data for communications can be sent in one operation whenever necessary using explicit messages.

- CompoBus/S Master Functions

Less wiring is required for terminal block expansions, connections to remote devices (such as signal lights or pushbutton switches), and connections to pneumatic valves and other non-OMRON products. Connect using VCTF cable or Special Flat Cable, which allows easy branching.

- RS-232C Communications

Connected to bar code readers, Programmable Terminals, and other devices, the Programmable Slave processes data locally to reduce the load on the master.

- Expansion Units (3 max.)

Just one Unit is required for each distributed block, reducing the number of interfaces for multipoint communications to, in turn, reduce costs.

Ordering Information

Unit type	Input	Output	Clock	Model
10 I/O points 6 inputs; 4 outputs	Connector	4 points: transistor (sinking)	Yes	CPM2C-S100C-DRT
		4 points: transistor (sourcing)	Yes	CPM2C-S110C-DRT

Note 1: For details on CPM2C PLCs, refer to the *CPM2A/CPM2C Catalog* (P049).

Note 2: For details on Programmable Slave specifications, refer to the *Programmable Slave Catalog* (R071).

System Configuration

General Specifications and Performance Specifications

Item		Specifications
Control method		Stored program method
I/O control method		Cyclic scan method (Immediate refreshing can be performed with IORF instruction.)
Programming language		Ladder diagram
Instruction length		1 step per instruction, 1 to 5 words per instruction
Instructions	Basic instructions	14 instructions
	Special instructions	105 instructions, 185 variations
Execution time	Basic instructions	0.64 μ s (LD instruction)
	Special instructions	7.8 μ s (MOV instruction)
Program capacity		4,096 words
Maximum I/O points		CPU Unit only: 10 points Expansion I/O: 96 points (32-point Expansion I/O Unit \times 3) CompoBus/S: 256 points (362 in total)
Input bits		IR 00000 to IR 00915 (Bits not used for input bits can be used for work bits.)
Output bits		IR 01000 to IR 01915 (Bits not used for output bits can be used for work bits.)
CompoBus/S input bits		128 bits: IR 02000 to IR 02715 (Words IR 020 to IR 027)
CompoBus/S output bits		128 bits: IR 03000 to IR 03715 (Words IR 030 to IR 037)
Work bits		672 bits: IR 02800 to IR 02915 (Words IR 028 to IR 029) IR 03800 to IR 03915 (Words IR 038 to IR 039) IR 04000 to IR 04915 (Words IR 040 to IR 049) IR 20000 to IR 22715 (Words IR 200 to IR 227)
Special bits (SR area)		440 bits: SR 22800 to SR 25507 (Words IR 228 to IR 225)
Temporary bits (TR area)		8 bits (TR0 to TR7)
Holding bits (HR area)		320 bits: HR 0000 to HR 1915 (Words HR 00 to HR19)
Auxiliary bits (AR area)		384 bits: AR 0000 to AR 2315 (Words AR 00 to AR23) These include the CompoBus/S slave status flags (AR 04 to 07).
Link bits (LR area)		256 points: LR 0000 to LR 1515 (Words LR 00 to LR 15)
Timers/Counters		256 timers/counters: TIM/CNT 000 to TIM/CNT 255 1-ms timers: TMHH 10-ms timers: TIMH 100-ms timers: TIM 1-s/10-s timers: TIML Decrementing counters: CNT Reversible counters: CNTR
Data memory	Read/Write	2,048 words (DM 0000 to DM 2047) The Error Log is contained in DM 2000 to DM 2021.
	Read-only	456 words (DM 6144 to DM 6599)
	PC Setup	56 words (DM 6600 to DM 6655)
DeviceNet slave functions		DeviceNet Remote I/O Link • Use up to 1,024 I/O points in the I/O Link. Explicit Message Communications • Any PC data area can be accessed from the master.
Basic interrupt functions	Interrupt inputs	2 interrupts (Used for both counter mode interrupt inputs and quick-response inputs.)
	Scheduled interrupts	1 interrupt
High-speed counter functions	High-speed counters	1 counter (20 kHz single-phase or 5 kHz 2-phase)
	Counter interrupts	1 interrupt (set value comparison or set-value range comparison)
	Interrupt inputs (counter mode)	2 interrupts (Used for both external interrupt inputs and quick-response inputs.)
	Count-up interrupts	2 interrupts (Used for both external interrupt inputs and quick-response inputs.)
Quick-response inputs		2 inputs (Used for both external interrupt inputs and counter mode interrupt inputs.) Min. input pulse width: 50 s max.
Pulse output		2 points without acceleration/deceleration, 10 Hz to 10 kHz each, and no direction control; 1 point with trapezoid acceleration/deceleration, 10 Hz to 10 kHz, and direction control; 2 points with variable duty-ratio outputs
Synchronized pulse control		1 point
Input time constant (ON response time = OFF response time)		Can be set for CPU inputs and Expansion Unit inputs only. (1 ms, 2 ms, 3 ms, 5 ms, 10 ms, 20 ms, 40 ms, or 80 ms)
Clock		Equipped with clock (built-in RTC)
Communications functions		Peripheral port: Supports Host Link, peripheral bus, no-protocol, or Programming Console connections. RS-232C port: Supports Host Link, no-protocol, 1:1 Link, or 1:1 NT Link connections.
Memory protection		HR area, AR area, program contents, DM area contents, and counter values maintained during power interruptions.
Memory backup		Non-volatile (flash) memory: Program, read-only DM area, and PC Setup Memory backup (lithium battery; 2-year lifetime): DM area, HR area, AR area, and counter values
Self-diagnostic functions		CPU errors (watchdog timer), memory errors, communications errors, setting errors, battery errors, and expansion I/O bus errors
Program checks		No END instruction, programming errors (checked when operation is started)
Programming Devices	Programming Console	C200H-PRO27
	CX-Programmer	Windows edition

* A Connecting Cable (CPM2C-CN111, CS1W-CN114, or CS1W-CN118) is required to connect to the communications (peripheral/RS-232C) port.

Communications Specifications

● DeviceNet

Item	Specifications																																		
Communications protocol	Conforms to DeviceNet																																		
Connection form *1	Combination of multi-drop method and T-branch connections (for trunk and drop lines)																																		
Baud rate	500, 250, or 125 kbps

Communications mode	Main line length	Branch line length	Total branch line length																								
High-speed Communications Mode *3	30 m max.	3 m max.	30 m max.																								
Long-distance Communications Mode *4	Free branching (up to a total cable length of 200 m)																										
Maximum number of nodes	32																										
Error control checks	Manchester code check, frame length check, and parity check																										

*1. Connect external terminating resistance.

*2. Switched using DM area setting. (Default setting: 750 kbps.)

*3. If the number of slaves connected is 16 or less, the maximum main line length will be 100 m max., and the maximum total branch line length will be 50 m max.

*4. There are no restrictions on the branching configuration, main line length, branch line length, or total branch line length. Connect external terminating resistance to the node farthest from the master.

Cables for I/O Connector

● Cables for Connector - Terminal Conversion Units

Cable	Connected product	Connector Products (Connector-Terminal Block Conversion Units) Connecting method
XW2Z-□□□A	XW2R-J20G-T	Philips screw M3
	XW2R-E20G-T	Slotted screw M3
	XW2R-P20G-T	Push-in spring

Dimensions

(Unit: mm)

CPM2C-S100C-DRT

CPM2C-S110C-DRT

I/O Link Unit

C200HW-DRT21

Ideal for Adding Advanced Functionality to Slaves or for Distributed Control

- Intelligent DeviceNet Slave.
- Supports I/O and message communications.
- Maximum I/O area size:
 - 512 input points (32 words)
 - 512 output points (32 words)
- Programming Console or Configurator freely allocates I/O areas.

Ordering Information

Name	Maximum I/O points	Model
I/O Link Unit (for CS1, C200HX/HG/HE)	512 inputs, 512 outputs (1,024 points in total)	C200HW-DRT21

General Specifications

Communications power supply voltage	11 to 25 VDC
Current consumption	Communications power supply: 45 mA max. Internal circuit power supply: 250 mA max. at 5 VDC
Maximum I/O points	512 input points (32 words) 512 output points (32 words)
Default area	Write area (linking with Master's write area): 1 word out of 350 IR words Read area (linking with Master's read area): 1 word out of 50 IR words
No. of connectable Units	10 max. (CS1/C200HX/HG/HE CPU Unit handles up to 880 I/O points) 16 max. (CS1/C200HX/HG/HE CPU Unit handles more than 880 I/O points)
Weight	250 g max.

Function Specifications

● Settings (Slave)

Function	A write area block and a read area block can be freely allocated to any areas or addresses respectively	
Allowable setting area	Both read and write areas can be allocated to IR, DM, HR, AR, LR, T/C, and EM areas	
First address	A readable or writable area by word (with some restrictions)	
Area size	Set in 1-byte increments up to 64 bytes for both read and write areas	
Setting method	Configurator	Refer to the <i>DeviceNet Configurator Operation Manual</i> (W328).
	Programming Console	<ol style="list-style-type: none"> 1. Write the set value to I/O setting area allocated to the Special I/O Area. 2. Turn ON the software switch allocated to the Special I/O Area and write the settings. 3. Turn the Programming Console OFF and ON or reset the AR area.

● Message Communications

Function	Supports messages that can be written to or read from the CS1/C200HX/HG/HE's user I/O areas (i.e., IR, DM, HR, AR, LR, T/C, and EM areas)
Master	OMRON's Master Unit or compatible unit from Rockwell
Max. message size	Slave (C200HW-DRT21) 200 bytes per READ or WRITE command

Dimensions

35 x 130 x 101 mm (W x H x D)

RS-232C Unit

DRT1-232C2

Transfer Data to and from Barcode Readers and Other Peripheral Devices with an RS-232C Port

- Two built-in RS-232C ports with separate settings and controls.
- Send and receive data using explicit messages.
- Read and write for up to 151 bytes.

Note: The production was discontinued at the end of September 2016.

Ordering Information

Name	Number of allocated words	Model
RS-232C Unit (DeviceNet-compliant)	One input word as status area	DRT1-232C2

General Specifications

Communications power supply voltage	11 to 25 VDC
Internal circuit power supply voltage	20.4 to 26.4 VDC (24 VDC -15%/+10%)
Current consumption	Communications power supply: 50 mA max. Internal circuit power supply: 100 mA max.
Insulation resistance	20 MΩ max. (at 100 VDC) between all DC power supply terminals and FG
Dielectric strength	500 VAC at 50/60 Hz for 1 min between all DC power supply terminals and FG with a leakage current of less than 1 mA
Noise immunity	Conforms to IEC61000-4-4, 2 kV (power line)
Vibration resistance	10 to 57.7 Hz, 0.75-mm single amplitude and 57.7 to 150 Hz at 98 m/s ² acceleration
Shock resistance	Malfunction: 196 m/s ² three times each in X, Y, and Z directions Destruction: 294 m/s ² three times each in X, Y, and Z directions
Ambient operating temperature	-10°C to 55°C (with no icing or condensation)
Ambient storage temperature	-25°C to 65°C
Ambient storage humidity	25% to 85% (with no icing or condensation)
Ambient operating atmosphere	With no corrosive gas
Mounting method	M4 screw or 35-mm DIN track mounting
Mounting strength	100 N: 10 s 10 N in track direction: 10 s

Terminal strength	Pulling force: 100 N: 10 s
Weight	250 g max.
Dimensions	110 x 65 x 60 mm

RS-232C Communications Specifications

Communications method	Full duplex, start-stop synchronization communications control
Transmission distance	15 m max.
Baud rate	1,200/2,400/4,800/9,600/19,200 bps
Transmission code	ASCII (7 bits)
No. of ports	Even, odd, or none
Stop bit length	1 or 2 bits
No. of ports	2
Connector	9-pin D-sub connector (male) x 2 ports
Communications memory capacity	1,024 bytes x 2 ports
Header code	Enabled (1 byte)/Disabled (selectable)
Delimiter code	Enabled (1 byte)/Disabled (selectable)
Flow control	Enabled/Disabled (selectable) for RS/CS control only

Dimensions

Digital Sensor Communications Unit

E3X-DRT21-S VER.3

CE

The DeviceNet Communication Unit That Simplifies Managing Sensor Settings

- ON/OFF signals and incident light levels can be sent to the host PLC without any need for programming (DeviceNet communications slave functionality).
- Threshold values and function settings can be read, written, or taught (using the Message Communications function).
- Simply connect the communication cables and slide the Amplifiers from the side for wire-saving.
- Up to 16 Sensor Amplifiers can be connected.

Ordering Information

● Digital Sensor Communications Unit

Name	Model
Digital Sensor Communications Unit	E3X-DRT21-S VER.3

● Wire-saving Connector

Type	Model
Cordless Slave Connector	E3X-CN02

Note: Order as many Connectors as the number of Sensors.

System Configuration

Ratings and Specifications

Item	Description	
Communications method	DeviceNet communications	
Communications functions	Remote I/O Communications Slave function	Monitors ON/OFF output, status, incident light level (digital display data)
	Message Communications function	Sets parameters using Explicit messages
	Configurator	Edits slave device parameters, enables device monitor functions
Mobile Console connection	E3X-MC11-SV2 can be connected	
Power supply	Supplied from the DeviceNet communications connector (power is also supplied to all connected Sensors through Wire-reducing Connectors.)	
Maximum connectable Sensors (See note 1.)	For remote I/O communications 1-CH mode (See note 2.) : For remote I/O communications 2-CH mode (See note 3.) or for remote I/O communications 2-CH mode + detection level monitoring mode (See note 4.) :	13 16
Connectable Sensors (See note 5.)	E3X-DA-S Series or E3X-MDA Series Digital Fiber Sensor E3C-LDA Series Laser Photoelectric Sensor with Separate Digital Amplifier E2C-EDA High-resolution Digital Proximity Sensor with Separate Amplifier (use connector-type Amplifier Units and the E3X-CN02 Cordless Slave Connector)	
Power supply voltage	11 to 25 VDC	
Current consumption (See note 6.)	70 mA max.	
Ambient operating temperature	-20°C to 55°C	
Ambient operating humidity	35% to 85% (with no condensation)	
Ambient storage temperature	-30°C to 70°C	
Dimensions (mm)	30 x 34.6 x71.3 (W x H x D)	
Weight (packed state)	Approx. 150 g	

Note 1: When any of the following Sensors is connected, two words are allocated per Sensor and each Sensor is counted as two Sensors for the number of connected Sensors.
E3X-DA□-S (□: 7/9), E3X-DA□TW-S (□: 6/8), E3X-MDA□ (□: 6/8), E3C-LDA□ (□: 6/8), E2C-EDA□ (□: 6/8)
E3X-DA□-S (□: 7/9), E3X-DA□TW-S (□: 6/8) will be discontinued at the end of March 2017.

2: Communications is possible for the ON/OFF output data from 13 Units. One word is allocated as the input area in the Master.

3: Communications is possible for the ON/OFF output data from 16 Units and the number of connected Sensors. Two words are allocated as the output area in the Master.

4: Communications is possible for the ON/OFF output data from 16 Units, the number of connected Sensors, and the detection levels for the connected Sensors.

Two words are allocated as the input area and one word is allocated for the number of connected Sensors in the Master.

5: Connection cannot be performed if the response speed of the Sensor is set to super-high-speed mode.

6: This does not include the current supplied to the Sensor.

Dimensions

(Unit: mm)
Tolerance class IT16 applies to dimensions in this data sheet unless otherwise specified.

DeviceNet ID Slave

V600-HAM42-DRT

Electromagnetic-coupling ID System Conforms to DeviceNet and Saves Wiring Effort

- The world's first Intelligent Flag III with support for DeviceNet.
- Responds flexibly to applications with data reading up to 24 bits.
- Switch writing between units of 8 bits and 16 bits.
- Address to access can be set from master.

Ambient operating temperature	-10°C to 55°C (with no icing)	
Ambient storage temperature	25°C to 65°C (with no icing)	
Ambient operating humidity	25% to 85% (with no condensation; ambient operating temperature is 40°C max. at humidity of 85%)	
Insulation resistance	20 MΩ min. (at 500 VDC) between all terminals excluding the ground terminal and the case	
Dielectric strength	1,000 VAC (50/60 Hz) for 1 minute between all terminals excluding the ground terminal and the case	
Vibration resistance	10 to 150 Hz, 0.2-mm double amplitude at 15 m/s ² acceleration with 10 sweeps in X, Y and Z directions for 8 minutes each	
Shock resistance	150 m/s ² in X, Y, and Z directions 3 times each (18 times in total)	
Dimensions	65 x 65 x 65 mm (excluding protrusions)	
Degree of protection	IP20 (IEC 60529)

DeviceNet-compliant Digital Indicators

K3HB-□-DRT

Digital Indicators Ideal for Measurement Displays and Judgment of Analog Levels, Such as Voltage Signals, Current Signals, and Temperatures

- High-precision, high-speed sampling.
- Measurement resolution of 0.01°C and sampling of 50 times per second.
- High-visibility negative-transmissive LCD with bright backlight.
- Present values and deviations are displayed using a bar graph.
- Compliant with CE and UL standards as well as RoHS.

Altitude		2,000 m max.	
Accessories		2 fixtures, unit stickers, instruction manual, watertight packing, terminal cover, DeviceNet connector * and crimp terminals (Hirose HR31-SC-121) *	

* DeviceNet only.

● K3HB-R/P/C

Power supply voltage	100 to 240 VAC Models 24 VAC/VDC Models DeviceNet power supply: 24 VDC
Allowable power supply voltage range	85% to 110% of the rated power supply voltage, DeviceNet power supply: 11 to 25 VDC
Power consumption (under maximum load) *1	100 to 240 VAC: 18 VA max., 24 VAC/VDC: 11 VA/7 W max.
Current consumption	DeviceNet power supply: 50 mA max. (24 VDC)
Inputs	No-voltage contact, voltage pulse, and open collector
External power supply	12 VDC ±10%, 80 mA (only for models with external power supplies) 10 VDC ±5%, 100 mA (only for models with external power supplies)
Event inputs *2, *4	<p>Startup compensation timer input NPN open collector or no-voltage contact signal ON residual voltage: 2 V max. ON current at 0 Ω: 4 mA max. Max. applied voltage: 30 VDC max. OFF leakage current: 0.15 mA max.</p>
Outputs *4	<p>Relay output 250 VAC, 30 VDC, 5 A (resistive load) Mechanical life expectancy: 5,000,000 operations, Electrical life expectancy: 100,000 operations</p> <p>Transistor output Maximum load voltage: 24 VDC, Maximum load current: 50 mA, Leakage current: 100 μA max.</p> <p>Linear output Linear output 0 to 20 mA DC, 4 to 20 mA: Load: 500 Ω max, Resolution: Approx. 10,000, Output error: ±0.5% FS Linear output 0 to 5 VDC, 1 to 5 VDC, 0 to 10 VDC: Load: 5 kΩ max, Resolution: Approx. 10,000, Output error: ±0.5% FS (1 V or less: ±0.15 V; not output for 0 V or less)</p>
Display method	Negative LCD (backlit LED) display, 7-segment digital display (character heights: PV: 14.2 mm (switches between green and red), SV: 4.9 mm (green))
Main functions *4	Scaling, measurement operation selection, averaging, previous average value comparison, output hysteresis, output ON delay, output test, teaching, display selection, display color switching, key protection, bank selection, display refresh period, maximum/minimum hold, and reset
Ambient operating temperature	-10°C to 55°C (with no icing or condensation)
Ambient operating humidity	25% to 85%
Storage temperature	-25°C to 65°C (with no icing or condensation)
Altitude	2,000 m max.
Accessories	Watertight packing, 2 fixtures, terminal cover, unit stickers, instruction manual. DeviceNet models also include a DeviceNet connector (Hirose HR31-5.08P-5SC(01)) and crimp terminals (Hirose HR31-SC-121) *3

*1. DC power supply models require a control power supply capacity of approximately 1 A per Unit when power is turned ON. Particular attention is required when using two or more DC power supply models. The OMRON S8VS-series DC Power Supply Unit is recommended.

*2. PNP input types are also available.

*3. For K3HB-series DeviceNet models, use only the DeviceNet Connector included with the product. The crimp terminals provided are for Thin Cables.

*4. Depends on the model.

DeviceNet Communications Specifications

DeviceNet-compliant Digital Controllers

E5AR-DRT/E5ER-DRT

General-purpose Digital Controllers with High Speed and High Accuracy. Three, 5-digit Easy-to-read Tall LCD Displays.

- High-speed sampling cycle (50 ms) for applications requiring high-speed response.
- Three backlit, negative LCD displays for simultaneous display of PV, SV, and MV.
- Multipoint control, cascade control, and proportional control all possible with a single Controller.
- Data processing functions provided as standard features: Square root extraction, linear approximation, and more.
- DeviceNet communications for data setting and monitoring without special programming.

E5AR

- Mounting panel thickness: 1 to 8 mm
- Do not mount Controllers side-to-side. Maintain the installation interval.
- Do not allow the rated ambient temperature to be exceeded when mounting more than one Controller.

E5ER

- Mounting panel thickness: 1 to 8 mm
- Do not mount Controllers side-to-side. Maintain the installation interval.
- Do not allow the rated ambient temperature to be exceeded when mounting more than one Controller.

DeviceNet Communications Unit for Modular Temperature Controller EJ1-DRT

Easily Perform Temperature Control for Multiple Channels.

- Up to 16 Temperature Controllers can be connected to a single DeviceNet Communications Unit.
- Sharing target values and present values using remote I/O communications without special programming reduces development work for communications.
- Flexibly allocate I/O memory using either fixed allocation addresses for simple allocations or user-set allocations from the Configurator.
- The EJ1 parameters can be backed up for easy resetting of parameters when the EJ1 is replaced.
- Explicit messages be sent from the PLC to easily read or write any parameter.

- *1. An End Unit is always required for connection to a Basic Unit or an HFU. An HFU cannot operate without a Basic Unit. External communications cannot be performed when using a Basic Unit only.
- *2. For heating/cooling control applications, control outputs 3 and 4 on the 2-point models are used for the cooling or heating control outputs. On the 4-point models, heating/cooling control is performed for the two input points.
- *3. When using the heater burnout alarm, purchase a Current Transformer (E54-CT1 or E54-CT3) separately.

System Configuration

DeviceNet Communications Specifications

Item		Specifications	
Communications protocol		Conforms to DeviceNet	
Communications functions	Remote I/O communications	<ul style="list-style-type: none"> Master-Slave connection (polling, bit-strobe, COS, cyclic) Conforms to DeviceNet communications standards. 	
	Simple I/O allocations	<ul style="list-style-type: none"> Allocation of input and output data using only switch settings and not the Configurator. Allocation of only basic data, such as Temperature Controller status, present values, target values, and alarm output status. Input area: 1 block, 86 words max. (up to the highest Communications Unit number) Output area: 1 block, 74 words max. (up to the highest Communications Unit number) 	
	I/O allocations using the Configurator	<ul style="list-style-type: none"> Allocate any I/O data using the Configurator. Allocation of user-set data, parameters specific to DeviceNet Communications Units, and Temperature Controller variable area data. Input area: 2 blocks, 100 words max. *1 Output area: 1 block, 100 words max. (The first word is always the Output Execution Enabled Flags.) *2 	
	Message Communications function	<ul style="list-style-type: none"> Explicit message communications CompoWay/F communications commands can be sent (commands are sent in explicit message format). 	
Setting, monitoring, and manipulating from the Configurator	Functions Supported by the DeviceNet Configurator: (Using parameter editing or device monitoring for DeviceNet Communications Units and Temperature Controllers) <ul style="list-style-type: none"> Setting and monitoring DeviceNet Communications Units. Registering connection configurations, making initial settings *3, changing settings, and monitoring for Temperature Controllers. Making allocations to the Master. Allocating data in input areas and output areas. Executing operation commands for Temperature Controllers. 		
	Connection form		
Baud rate		DeviceNet: 500, 250, or 125 kbps (automatic follow-up)	
Communications media		Special 5-wire cable (2 signal lines, 2 power supply lines, 1 shield line)	
Communications distance	Baud rate	Network length (max.)	Branch line length
	500 kbps	100 m max. (100 m max.)	6 m max.
	250 kbps	250 m max. (100 m max.)	6 m max.
	125 kbps	500 m max. (100 m max.)	6 m max.
The values in parentheses are for Thin Cable.			
Communications power supply		11 to 25 VDC	
Maximum number of nodes		64 (DeviceNet Configurator is counted as one node when connected)	
Maximum number of slaves		63	
Error control checks		CRC errors	
DeviceNet power supply		Supplied from DeviceNet communications connector (DeviceNet communications power and internal circuit power for DeviceNet Communications Unit)	
Applicable Temperature Controllers		EJ1 Series (excluding the EJ1G) TC4: EJ1N-TC4A-QQ and EJ1N-TC4B-QQ TC2: EJ1N-TC2A-QNHB, EJ1N-TC2B-QNHB, EJ1N-TC2A-CNB, and EJ1N-TC2B-CNB	
Maximum number of Temperature Controllers that can be connected		16 (The maximum is 15, however, for side-by-side connections. The 16th Unit is an End Unit for distributed placement.)	

- *1. Two blocks can be used (i.e., connections can be set) only when a CS/CJ-series DeviceNet Unit is used as a Master. When a C200HX/HG/HE DeviceNet Master Unit is used, the input area will be one block with up to 100 words (200 bytes) (poll connections only).
- *2. When a C200HX/HG/HE DeviceNet Master Unit is used, a maximum of 32 words can be allocated per node.
- *3. Batch settings can be made for target values, alarm set values, PID constants, and other parameters for Temperature Controllers.

Dimensions

EJ1N-HFUB-DRT

DeviceNet Communications Unit for Digital Temperature Controllers

E5ZN-DRT

Connect the E5ZN Modular Temperature Controllers through DeviceNet.

- The I/O link function can be used to make settings and monitor values (such as process values) in the E5ZN Modular Temperature Controller without communications programming.
- Up to 16 E5ZN Modular Temperature Controllers can be connected to one Unit.
- The DeviceNet Configurator can be used to upload or download all of the E5ZN Modular Temperature Controller's parameters in one batch.

Ordering Information

● DeviceNet Communications Unit

Unit Name	External input power supply voltage	Applicable Model	Model
DeviceNet Communications Unit	24 VDC	E5ZN	E5ZN-DRT
Terminal Unit			E5ZN-SCT24S

Note: A DeviceNet Communications Unit and Terminal Unit are required to connect to DeviceNet. Two End Plates are provided with E5ZN-SCT24S Terminal Units. When mounting to a DIN track, be sure to mount End Plates on both sides.

● Modular Temperature Controllers

Unit Name	Power supply	No. of control points	Control output	Auxiliary output	Functions	Communications functions	Input type *5	Model	
Temperature Controller *1	24 VDC	2	Voltage output (for SSRs)	Transistor output: 2 pts (sinking)	Heater burnout alarm *3	RS-485	Thermocouple	E5ZN-2QNH03TC-FLK	
				Transistor output: 2 pts (sourcing)			Platinum resistance thermometer	E5ZN-2QNH03P-FLK	
			Transistor output	Transistor output: 2 pts (sinking)			Thermocouple	E5ZN-2QPH03TC-FLK	
				Transistor output: 2 pts (sourcing)			Platinum resistance thermometer	E5ZN-2QPH03P-FLK	
			Analog output (current output) *2	Transistor output: 2 pts (sinking)			Thermocouple	E5ZN-2TNH03TC-FLK	
				Transistor output: 2 pts (sourcing)			Platinum resistance thermometer	E5ZN-2TNH03P-FLK	
				Transistor output: 2 pts (sinking)	Event input: 1 point per Unit		Thermocouple	E5ZN-2TPH03TC-FLK	
				Transistor output: 2 pts (sourcing)			Platinum resistance thermometer	E5ZN-2TPH03P-FLK	
				Transistor output: 2 pts (sinking)			Thermocouple	E5ZN-2CNF03TC-FLK	
				Transistor output: 2 pts (sourcing)			Platinum resistance thermometer	E5ZN-2CNF03P-FLK	
				Transistor output: 2 pts (sinking)			Thermocouple	E5ZN-2CPF03TC-FLK	
				Transistor output: 2 pts (sourcing)			Platinum resistance thermometer	E5ZN-2CPF03P-FLK	

*1. Terminal Units are required for wiring. Purchase separately.

*2. When connecting the controlled system's load, the heating or cooling control output can be allocated to the control output or auxiliary output. When connecting a recording device or Digital Panel Meter, the transfer output can be allocated to the analog output model's control output or auxiliary outputs 3 and 4.

*3. When using the heater burnout alarm, purchase a Current Transformer (E54-CT1 or E54-CT3) separately.

*4. When using heating/cooling control, the auxiliary output will be either the heating control output or the cooling control output.

*5. Analog inputs and infrared temperature sensors (ES1A Series) can also be used with thermocouple models.

● Terminal Unit

Unit Name	No. of terminals	Functions	Model
Terminal Unit	24	Equipped with communications terminals for power supply, communications, and setting devices.	E5ZN-SCT24S
	18 *	Not equipped with communications terminals for power supply, communications, and setting devices.	E5ZN-SCT18S

Note: Two End Plates are provided with E5ZN-SCT24S Terminal Units. When mounting to a DIN track, be sure to mount End Plates on both sides.

* When 2 or more E5ZNs are being mounted side-by-side, use this Terminal Unit for the second or higher Units. Up to 16 Terminal Units (32 channels) can be used. When using E5ZNs individually, be sure to use the E5ZN-SCT24S.

● Setting Display Unit (Order Separately)

Unit Name	Power supply	Model
Setting Display Unit *	24 VDC	E5ZN-SDL

* Purchase sockets for wiring separately.

Specifications

Power supply voltage	DeviceNet communications power supply voltage 11 to 25 VDC
Connectable Temperature Controllers	E5ZN Series
Maximum number of connectable Temperature Controllers	16
Main functions	Remote I/O, explicit message server, CompoWay/F command-through function, parameter backup, configuration registration, etc.
Vibration resistance	10 to 55 Hz, 10 m/s ² for 2 hrs each in ±X, ±Y, and ±Z directions
Shock resistance	150 m/s ² , 3 times each in ±X, ±Y, and ±Z directions
Dielectric strength	500 VAC, 50/60 Hz for 1 min between the DIN track and all DeviceNet connector terminals and between the DIN track and all terminal socket terminals
Insulation resistance	20 MΩ min (at 100 VDC)
Ambient operating temperature	-10°C to 55°C (with no icing or condensation)
Ambient operating humidity	25% to 85%
Ambient operating/storage temperature	-25°C to 65°C (with no icing or condensation)
Degree of protection	IP00
Dimensions	30 x 130 x 89.6 mm (W x H x D) (When mounted to a E5ZN-SCT24S Terminal Unit.)
Memory protection	EEPROM number of write operations: 100,000 (backup data)
Weight	100 g max.

Communications (for Temperature Controller Expansion)

Transmission line connection method	RS-485 multipoint
Communications method	RS-485 (2-wire, half-duplex)
Synchronization method	Start-stop synchronization
Baud rate	38,400 bps
Transmission code	ASCII
Data bit length	7 bits
Stop bit length	2 bits
Error detection	Vertical parity (even) BCC (block check character)
Flow control	None
Number of Units that can be connected in parallel	16 Units (32 channels)

Terminal Arrangement

E5ZN-SCT24S

Total branch line length			
39 m max. 78 m max. 156 m max.			

The values in parentheses are for Thin Cable.

Power supply voltage	DeviceNet power supply	24 VDC (for internal circuits)
	External input power supply	24 VDC (for RS-485 communications circuits and Temperature Controllers)
Allowable power supply voltage range	DeviceNet power supply	11 to 25 VDC
	External input power supply	20.4 to 26.4 VDC
Power consumption	DeviceNet power supply	Approx. 1.1 W (for a current of 45 mA at 24 VDC) *
	External input power supply	Approx. 0.5 W (for a current of 20 mA at 24 VDC)
Maximum number of nodes		64 (DeviceNet Configurator is counted as one node when connected)
Maximum number of slaves		63
Error control checks		CRC errors
DeviceNet power supply		Supplied from DeviceNet communications connector

* Does not include current supplied to Temperature Controllers.

(Unit: mm)

Multi-function Compact Inverter MX2-Series V1 type DeviceNet Communication Unit

3G3AX-MX2-DRT-E

Support for open network with DeviceNet Communications Unit

- Reduced wiring of Multi-function compact inverter MX2 series *1
- 8 types of remote I/O functions
- The Explicit Message functions in addition to remote I/O functions
- Parameter edit via DeviceNet by using support tool CX-Drive *2

*1 DeviceNet communication unit can be used with the inverter 3G3MX2 of unit version 1.1 or higher.

*2 CX-Drive can be used with version 2.6 or higher.

Ordering Information

Name	Mountable Inverter	Model
DeviceNet communication unit	MX2-series V1 type	3G3AX-MX2-DRT-E

Performance Specifications

Power supply	Supplied from the inverter
Protective structure	IP20
Ambient Operating Temperature	-10 to 55°C (with no condensation)
Ambient Storage Temperature	-20 to 65°C (with no condensation)
Ambient Operating Humidity	20 to 90%RH
Vibration Resistance	5.9m/s ² (0.6G) , 10 to 55Hz
Application Environment	At a maximum altitude of 1,000 m; indoors (without corrosive gases or dust)
Insulation Resistance	500VAC (between isolated circuits)
Weight	Approx.170g
Number of Words allocated	Initial setting IN:2CH/OUT:2CH (At maximum setting IN:10CH/OUT:10CH)

Note. For detail, refer to the MX2-series V1 type Catalog (Cat. No.I920).

Dimensions

(Unit: mm)

3G3AX-MX2-DRT-E

* After the DeviceNet Communication Unit is installed, dimension D of the inverter increases by 26.4 mm.
(Dimension D of the inverter varies depending on the capacity. Refer to the MX2-series USER'S MANUAL (Cat.No.I585))

High-function General-purpose Inverters RX-Series V1 type DeviceNet Communication Unit

3G3AX-RX-DRT-E

Support for open network with DeviceNet Communications Unit

- Reduced wiring of Multi-function compact inverter RX series *1
- 8 types of remote I/O functions
- The Explicit Message functions in addition to remote I/O functions
- Parameter edit via DeviceNet by using support tool CX-Drive *2

*1 DeviceNet communication unit can be used with the inverter 3G3MX2 of unit version 1.1 or higher.

*2 CX-Drive can be used with version 2.6 or higher.

Ordering Information

Safety Network Controller

NE0A-SCPU01

New Lineup for Safety Applications with Up to 12 Inputs

- Circuits for the required safety category are easy to build.
- The safety circuits you create can be registered as templates and reused, for easy standardization.
- TÜV-certified templates is also available.
- The NE0A operating conditions can be monitored from a standard DeviceNet Master.
- Network distribution is possible by combining with an NE1A Safety Controller.

Ordering Information

Name	I/O points			Model	Unit version
	Safety inputs	Test outputs	Safety outputs		
Safety Network Controllers	12 *	2	6	NE0A-SCPU01	Ver. 1.0

* When using the NE0A-SCPU01 as a standalone Controller, one input each is required for the feedback input and manual restart.

Note: Network Configurator version 2.1□ or higher must be used when using a NE0A-SCPU01 Safety Network Controller.

The values in parentheses are for Thin Cable.					
Communications power supply	11 to 25 VDC				
Maximum number of nodes	63				
Safety I/O communications	Safety Master function • Max. no. of connections: 2 (one each for inputs and outputs) Multi-cast inputs can be used to enable communications with up to 15 Safety Masters. • Connection type: Single-cast, multi-cast				
Standard I/O communications	Standard Slave function • Max. no. of connections: 2 • Connection type: Poll, bit-strobe, COS, cyclic				
Message communications	Max. message length: 502 bytes				

Functions

The following function blocks are available for designing safety circuits with the NE0A-SCPU01.

These function blocks can be selected and assembled using the interactive wizard format to efficiently design safety applications.

Classification of function block for safety circuit designs	Application								
Function blocks for safety input devices and setting input filter times	<p>The following six parts can be selected for use as safety input devices. For Category 3 or 4 compliance, the filter monitoring time between signals can also be adjusted with redundant wiring for the necessary safety devices.</p> <ul style="list-style-type: none"> Emergency Stop Switches Safety Door Switches Limit Switches Safety Light Curtains Enabling Switches Mode Selectors 								
Logic function blocks for input conditions	<p>Select a Safety Light Curtain as the safety input device, and select a muting function when required.</p> <table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>No setting</td> <td>Uses the ON/OFF status from the safety input device exactly as it is.</td> </tr> <tr> <td>OR operation</td> <td rowspan="4"> <ul style="list-style-type: none"> • For switching maintenance areas with a Mode Selector. • For applications such as a Safety Light Curtain muting function. </td> </tr> <tr> <td>AND/OR operations</td></tr> <tr> <td>AND operation</td></tr> <tr> <td>OR/AND operations</td></tr> </table>		No setting	Uses the ON/OFF status from the safety input device exactly as it is.	OR operation	<ul style="list-style-type: none"> • For switching maintenance areas with a Mode Selector. • For applications such as a Safety Light Curtain muting function. 	AND/OR operations	AND operation	OR/AND operations
No setting	Uses the ON/OFF status from the safety input device exactly as it is.								
OR operation	<ul style="list-style-type: none"> • For switching maintenance areas with a Mode Selector. • For applications such as a Safety Light Curtain muting function. 								
AND/OR operations									
AND operation									
OR/AND operations									
Function blocks for resets	<p>Selects manual or auto reset.</p>								
Logic function blocks for output conditions	<p>For applications such as stopping all outputs for multiple safety devices.</p> <table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>No setting</td> <td>Uses the ON/OFF status of the safety signal exactly as it is.</td> </tr> <tr> <td>AND operation</td> <td rowspan="2"> <ul style="list-style-type: none"> • Selects the interlock conditions for the safety signal. </td> </tr> <tr> <td>OR/AND operations</td></tr> </table>		No setting	Uses the ON/OFF status of the safety signal exactly as it is.	AND operation	<ul style="list-style-type: none"> • Selects the interlock conditions for the safety signal. 	OR/AND operations		
No setting	Uses the ON/OFF status of the safety signal exactly as it is.								
AND operation	<ul style="list-style-type: none"> • Selects the interlock conditions for the safety signal. 								
OR/AND operations									
Function blocks for setting the welded contact check	<p>Used to check the safety condition of an output device.</p> <table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>No setting</td> <td>No checking of the output device (used for Category 2 or lower).</td> </tr> <tr> <td>EDM</td> <td>Used to check for contact welding in a Relay or Contactor. Also used to change the setting for monitoring time.</td> </tr> </table>		No setting	No checking of the output device (used for Category 2 or lower).	EDM	Used to check for contact welding in a Relay or Contactor. Also used to change the setting for monitoring time.			
No setting	No checking of the output device (used for Category 2 or lower).								
EDM	Used to check for contact welding in a Relay or Contactor. Also used to change the setting for monitoring time.								
Function blocks for safety output devices and setting output delay times	<p>For setting an auxiliary output (to output an error condition) and for setting the output delay.</p>								

Note: There is a possibility that safety cannot be maintained when an OR part or an AND/OR part is selected for input logic, or an OR/AND part is selected for output logic. Sufficiently confirm safety prior to use.

Internal Circuit Diagrams

NE0A-SCPU01

Terminal No.	Terminal name	Description
--	V0	Power supply terminal for internal circuit (24 VDC)
--	G0	
1	V1	Power supply terminal for external input device and test output (24 VDC)
11	G1	
24	V2	Power supply terminal for external output device (24 VDC)
34	G2	
2 to 10	IN0 to IN8	Safety input terminal Terminals IN10 and IN11 are used only for connecting a reset switch or EDM feedback.
21 to 23	IN9 to IN11	
12 to 20 31 to 33	T0 to T1	Test output terminal Connected to IN0 to IN11 safety inputs. T0 and T1 output test pulses with different patterns. The T0 terminals are internally connected and the T1 terminals are internally connected.
25 to 30	OUT0 to OUT5	Safety output terminals
35 to 40	G2	Common terminal Terminals 34 to 40 are internally connected.

Safety Precautions

- Be sure to read the following operation manual for precautions and other details required for correct use of the Safety Network Controller. *CIP Safety on DeviceNet Safety Network Controller NE0A Series Operation Manual* (Cat. No. Z916)

Safety Network Controller

NE1A-SCPU Series

Achieve Safety Control through Programming.

- Compact Safety Controller.
- The NE1A-SCPU01-V1 provides 16 built-in safety inputs and 8 built-in safety outputs.
- The NE1A-SCPU02 provides 40 built-in safety inputs and 8 built-in safety outputs.
- Reduced wiring with safety networks. Connect up to 32 Safety Terminals.
- Monitor the safety system from Standard Controllers across the network.
- ISO13849-1 (PLe) and IEC 61508 SIL3 certification.

Ordering Information

Name	I/O points			Model	Unit version
	Safety inputs	Test outputs	Safety outputs		
Safety Network Controllers	16	4	8	NE1A-SCPU01-V1	Ver. 2.0
	40	8	8	NE1A-SCPU02	Ver. 2.0

Note: The standard NE1A Controllers are equipped with spring-cage terminal blocks, but other screw terminal blocks are available if desired, e.g., to replace previous terminals. Refer to *Accessories*.

Ambient storage temperature		-40°C to 70°C	
Degree of protection		IP20	
Serial interface		USB Ver1.1	
Weight		460 g max.	690 g max.

*1. V0-G0: Internal control circuit

V1-G1 (G): For external input device, test output

V2-G2 (G): For external output device

The two ground terminals on the NE1A-SCPU02 are internally connected.

*2. Not including power consumption for external devices.

Safety Input Specifications

Input type	Sinking inputs (PNP)
ON voltage	11 VDC min. between each terminal and ground
OFF voltage	5 VDC min. between each terminal and ground
ON current	1 mA max.
Input current	4.5 mA

Safety Output Specifications

Output type	Sourcing outputs (PNP)
Rated output current	0.5 A max./output
ON residual voltage	1.2 V max. between each output terminal and V2
Leakage current	0.1 mA max.

Test Output Specifications

Output type	Sourcing outputs (PNP)
Rated output current	0.7 A max./output *
ON residual voltage	1.2 V max. between each output terminal and V1
Leakage current	0.1 mA max.

* The maximum current for simultaneously ON outputs is 1.4 A.
(T0 to T3: NE1A-SCPU01-V1, T0 to T7: NE1A-SCPU02)
A 15 to 400-mA, 24-VDC external indicator can be connected to T3 and T7.

DeviceNet Communications Specifications

Communications protocol	Conforms to DeviceNet				
Connection form	Multi-drop system and T-branch system can be combined (for trunk line and branch lines)				
Baud rate	500/250/125 kbps				
Communications media	Special 5-wire cable (2 signal lines, 2 power supply lines, 1 shield line)				
Communications distance	Baud rate	Network length (max.)	Branch line length	Total branch line length	
	500 kbps	100 m max. (100 m max.)	6 m max.	39 m max.	
	250 kbps	250 m max. (100 m max.)		78 m max.	
	125 kbps	500 m max. (100 m max.)		156 m max.	
The values in parentheses are for Thin Cable.					
Communications power supply	11 to 25 VDC				
Maximum number of nodes	63				
Safety I/O communications (Pre-Ve. 1.0)	Safety Master function • Max. no. of connections: 16 • Max. data size: Input 16 bytes or output 16 bytes (per connection) • Connection type: Single-cast, multi-cast Safety Slave function • Max. no. of connections: 4 • Max. data size: Input 16 bytes or output 16 bytes (per connection) • Connection type: Single-cast, multi-cast				
Safety I/O communications (unit version 1.0 or later)	Safety Master function • Max. no. of connections: 32 • Max. data size: Input 16 bytes or output 16 bytes (per connection) • Connection type: Single-cast, multi-cast Safety Slave function • Max. no. of connections: 4 • Max. data size: Input 16 bytes or output 16 bytes (per connection) • Connection type: Single-cast, multi-cast				
Standard I/O communications (all unit versions)	Standard Slave function • Max. no. of connections: 2 • Max. data size: Input 16 bytes or output 16 bytes (per connection) • Connection type: Poll, bit-strobe, COS, cyclic				
Message communications	Max. message length: 552 bytes				

Functions

Function Blocks

NE1A-SCPU-series Controller support the following logic functions and function blocks. Support depends on the unit version.

● Logic Functions

Name	Function list entry	Supporting unit versions
NOT	NOT	All
AND	AND	
OR	OR	
Exclusive OR	EXOR	
Exclusive NOR	EXNOR	
RS Flip-flop	RS-FF	
Comparator	Comparator	1.0 or later

● Function Blocks

Name	Function list entry	Supporting unit versions
Reset	Reset	All
Restart	Restart	
Emergency Stop Monitoring	E-STOP	
Light Curtain Monitoring	Light Curtain Monitoring	
Safety Gate Monitoring	Safety Gate Monitoring	
Two-hand Controller	Two Hand Controller	
Off-Delay Timer	Off-Delay Timer	
On-Delay Timer	On-Delay Timer	
User Mode Switch Monitoring	User Mode Switch	
External Device Monitoring	EDM	
Routing	Routing	
Muting	Muting	1.0 or later
Enable Switch Monitoring	Enable Switch	
Pulse Generator	Pulse Generator	
Counter	Counter	
Multiconnector	Multi Connector	

Internal Circuit Diagrams

NE1A-SCPU01-V1

Terminal name	Description
V0	Power supply terminal for internal circuit The two V0 terminals are internally connected.
G0	Power supply terminal for internal circuit The two G0 terminals are internally connected.
V1	Power supply terminal for external input device and test output
G1	Power supply terminal for external input device and test output
V2	Power supply terminal for external output device
G2	Power supply terminal for external output device
IN0 to IN15	Safety input terminal
T0 to T3	Test output terminal Connected to IN0 to IN15 safety inputs. Each test output terminal outputs a different test pulse pattern. Terminal T3 also supports a current monitoring function for the output signal. Example: Muting lamp
OUT0 to OUT7	Safety output terminals

NE1A-SCPU02

Terminal name	Description
V0	Power supply terminal for internal circuit The two V0 terminals are internally connected.
G0	Power supply terminal for internal circuit The two G0 terminals are internally connected.
V1	Power supply terminal for external input device and test output
G	Power supply terminal for external input device and test output
V2	Power supply terminal for external output device
G	Power supply terminal for external output device
IN0 to IN39	Safety input terminal
T0 to T3	Connected to IN0 to IN19 safety inputs. Each test output terminal outputs a different test pulse pattern. Terminal T3 also supports a current monitoring function for the output signal. Example: Muting lamp
T4 to T7	Test output terminal Connected to IN20 to IN39 safety inputs. Each test output terminal outputs a different test pulse pattern. Terminal T7 also supports a current monitoring function for the output signal. Example: Muting lamp
OUT0 to OUT7	Safety output terminals

Safety Precautions

- Be sure to read the following operation manual for precautions and other details required for correct use of the Safety Network Controller. *CIP Safety on DeviceNet Safety Network Controller Operation Manual* (Cat. No. Z906)

Functions Supported According to Unit Version

○ : Supported, ---: Not supported

Function	Model Unit version	NE1A-SCPU01	NE1A-SCPU01-V1	NE1A-SCPU02
		Pre-Ver. 1.0	Unit version 1.0/2.0	Unit version 1.0/2.0
Logic processing functions	Maximum program size (total number of function blocks)	128	254	254
	New Function Blocks <ul style="list-style-type: none"> • RS flip-flop • Multiconnector • Muting • Enable Switch Monitoring • Pulse Generator • Counter • Comparator 	---	○	○
	Selecting a rising edge as the reset condition for Reset and Restart function blocks	---	○	○
	Using local I/O status in logic programming	---	○	○
	Using overall Unit status in logic programming	---	○	○
	Program execution wait functions	---	○ (Unit version 2.0 or higher)	○ (Unit version 2.0 or higher)
I/O control functions	Monitoring contact operation counter	---	○	○
	Mounting total ON time monitor	---	○	○
DeviceNet communications functions	Number of safety I/O connections for Safety Master	16	32	32
	Selecting operating mode for safety I/O communications when communications errors occur	---	○	○
	Attaching local output data to send data during slave operation	---	○	○
	Attaching local I/O monitor data to send data during slave operation	---	○	○
	Functions to communicate with devices existing on other networks (Off-Link connection)	---	○ (Unit version 2.0 or higher)	○ (Unit version 2.0 or higher)
System startup and error recovery functions	Storing log of nonfatal errors in nonvolatile memory	---	○	○
	Adding function block errors to error log	---	○	○
EtherNet/IP communications functions	I/O communications	---	---	---
	Message communications	---	---	---
	Read/write of target I/O area	---	---	---
Routing between DeviceNet and EtherNet/IP	I/O routing	---	---	---
	Message routing	---	---	---
UDP/IP message communications functions	Message communications by UDP/IP	---	---	---

● Unit Versions and Network Configurator Versions

Network Configurator version 2.0□ or higher must be used when using a NE1A-SCPU01-V1 or NE1A-SCPU02 Safety Logic Controller with unit version 2.0.

○ : Supported, ---: Not supported

Model	Network Configurator					
	Ver. 1.3□	Ver. 1.5□	Ver. 1.6□	Ver. 2.0□/2.1□	Ver.2.2□	Ver.3.3□
NE1A-SCPU01 Pre-Ver. 1.0	○	○	○	○	○	○
NE1A-SCPU01-V1 Unit version 1.0	×	×	○	○	○	○
NE1A-SCPU02 Unit version 1.0	×	×	○	○	○	○
NE1A-SCPU01-V1 Unit version 2.0	×	×	○ (*1)	○	○	○
NE1A-SCPU02 Unit version 2.0	×	×	○ (*1)	○	○	○

*1. It can be used as unit version 1.0.

Note 1: Users who use Network Configurator version 1.5□ or earlier can upgrade to version 1.6□ at no charge.

Note 2: When using Network Configurator version 1.6□, there are no operational differences in the NE1A-SCPU01-V1 and NE1A-SCPU02.

● Version Upgrade

If you have purchased Ver.1.□□, you will need to buy the upgrade CD-ROM. (Refer to page 133.)

Safety I/O Terminals

DST1 Series

Distributed Safety Terminals That Reduce Wiring.

- Four models are available to match the I/O type and number of points.
- Monitor operation from the DeviceNet Master using the DeviceNet Slave functionality.
- Support for logic processing by the DST1-XD0808SL-1.
- IEC 61508 SIL3 and EN 954-1/ISO13849-1 CAT4 certification.

Ordering Information

Name	I/O points	Model
Safety I/O Terminals	Safety inputs: 12, test outputs: 4	DST1-ID12SL-1
	Safety inputs: 8, safety outputs (semiconductor): 8, test outputs: 4	DST1-MD16SL-1
	Safety inputs: 8, safety outputs (semiconductor): 8, test outputs: 4	DST1-XD0808SL-1 *
	Safety inputs: 4, safety outputs (relay): 4, test outputs: 4	DST1-MRD08SL-1

Note: The standard DS1T Safety I/O Terminals are equipped with spring-cage terminal blocks, but screw terminal blocks are available if desired, e.g., to replace previous terminals. Refer to CIP Safety on DeviceNet Accessories.

* Use the Safety Network Configurator Ver. 2.0 or later to make DST1-XD0808SL-1 settings.

Safety Precautions

- Be sure to read the following operation manual for precautions and other details required for correct use of the Safety Network Controller. *CIP Safety on DeviceNet Safety I/O Terminals Operation Manual* (Cat. No. Z904)

Network Configurator WS02-CFSC1-E

Programming Software for Creating Safety Circuits.

- Performs settings for the Safety Network Controllers and Safety I/O Terminals.
- Provides safety circuit programming functions.
- Provides monitoring functions for safety circuits.
- Includes DeviceNet Configurator functions.

Ordering Information

Name	Components	Applicable computer	Applicable OS *	Model
Network Configurator	Installation disc (CD-ROM: 1 license)	IBM PC/AT or compatible	Windows XP/ Vista(32bit/64bit)/ 7(32bit/64bit)	WS02-CFSC1-EV3
	Upgrade disc (CD-ROM: 1 license)			WS02-CFSC1-EV3-UP

Note: Consult your OMRON representative for the license not listed above.

* The applicable OS depends on the version. Refer to general specifications for details.

System Configuration

General Specifications

Item	Overview
OS Japanese or English version	<ul style="list-style-type: none"> ■ Ver. 2.2□ or earlier Windows 2000 Professional (Service Pack 3 or later) Windows XP (Service Pack 2 or later, except for 64-bit version) Windows Vista (Service Pack 1 or later, except for 64-bit version) ■ Ver. 3.30 or later Windows XP (Service Pack 3 or later, except for 64-bit version) Windows Vista (Service Pack 2 or later) Windows 7
Main unit	Personal computer with processor recommended by Microsoft
Memory	Memory capacity recommended by Microsoft
Hard disk drive	At least 200 MB of hard disk space
Monitor	SVGA (800 x 600 resolution) or higher with 256 colors minimum
Disk device	CD-ROM drive
Mouse	Windows-supported mouse or other pointing devices
Communications port (Note)	<p>One of the following communications port is required:</p> <ul style="list-style-type: none"> • USB port: When using a USB port (USB 1.1) of NE1A-SCPU series or NE0A series to connect online • Ethernet port: When using Ethernet to connect online • DeviceNet interface card (3G8F7-DRM21 or 3G8E2-DRM21-V1): When using DeviceNet to connect online

Note 1: PC cannot be put into a standby state with the NE1A series connected via USB cable.

2: DeviceNet interface card does not conform to 64-bit operating system.

3: One or more USB port is required on a communications port of the maintenance tool.

4: Windows is a registered trademark of Microsoft.

Safety Precautions

- Be sure to read the following operation manual for precautions and other details required for correct use of the Safety Network Controller.

CIP Safety on DeviceNet Safety Network Configurator Operation Manual (Cat. No. Z905)

Unit Versions and Network Configurator Versions

Network Configurator version 2.0□ or higher must be used when using a NE1A-SCPU01-V1 or NE1A-SCPU02 Safety Logic Controller with unit version 2.0.

The following table shows the relationship between unit versions and Network Configurator versions.

○ : Applicable, ×: Not applicable

Model	Network Configurator					
	Ver. 1.3□	Ver. 1.5□	Ver. 1.6□	Ver. 2.0□/2.1□	Ver. 2.2□	Ver. 3.3□
NE1A-SCPU01 Pre-Ver. 1.0	○	○	○	○	○	○
NE1A-SCPU01-V1 Unit version 1.0	×	×	○	○	○	○
NE1A-SCPU02 Unit version 1.0	×	×	○	○	○	○
NE1A-SCPU01-V1 Unit version 2.0	×	×	○ (*1)	○	○	○
NE1A-SCPU02 Unit version 2.0	×	×	○ (*1)	○	○	○

*1. It can be used as unit version 1.0.

Note 1: Users who use Network Configurator version 1.5□ or earlier can upgrade to version 1.6□ at no charge.

2: When using Network Configurator version 1.6□, there are no operational differences in the NE1A-SCPU01-V1 and NE1A-SCPU02 Safety Logic Controllers that derive from the unit version.

Configurator/Software

DeviceNet Configurator Software Version 2.0

WS02-CFDC1

DeviceNet Configurator PC Card (Software Included)

3G8E2-DRM21-V1

Easily Build and Maintain Multi-vendor DeviceNet Networks.

- Easily build networks using graphical screen operations.
- Make connections from a DeviceNet Card for personal computers or from a serial port.
- Monitor devices while connected online.
- Build maintenance systems with Smart Slaves.

Ordering Information

Name	Applicable OS	Model
DeviceNet Configurator Software	Windows 2000 (Service Pack2 or higher)/XP/Vista/7 (32bit) *1	WS02-CFDC1-E
DeviceNet Configurator PC Card *2	Windows 2000 (Service Pack2 or higher)/XP	3G8E2-DRM21-EV1

*1. To use the software on Windows Vista or Windows 7, download the version upgrade program from the following OMRON website and apply it: www.fa.omron.co.jp/

*2. The DeviceNet Configurator Software is included with the 3G8E2-DRM21-V1.

Specifications

Basic Functions	Virtual network management, device settings (I/O allocations, connection settings), device monitoring, device (EDS file) management, and online connections to DeviceNet devices
Created Files	Configurator network configuration files (*.npf) Configurator device parameter files (*.pvf)
Files created by exporting data	I/O comments: CSV-format files (*.csv) NetXServer DDE settings file (*.nxd) NetXServer ONC settings files (*.ini) ONC DRM Unit settings files (*.ini)

System Requirements

CPU	Processor recommended by Microsoft.
OS	Windows 2000 (Service Pack2 or higher)/XP/Vista/7 (32bit) *

* To use the software on Windows Vista or Windows 7, download the version upgrade program from the following OMRON website and apply it: www.fa.omron.co.jp/

Hardware for Network Connection

Either of the following software applications is required to connect online to DeviceNet devices.

OMRON DeviceNet Board

- Special PCI Board: 3G8F7-DRM21
- Special PC Card: 3G8E2-DRM21-V1

Molex DeviceNet Network Interface Cards

- USB Interface Module Part Number: 1120760001
(Old Part Number: SST-DN4-USB)

OMRON CS/CJ-series PLC equipped with DeviceNet Unit

- Peripheral port *1
- Serial communications port or Serial Communications Unit *1
- Ethernet Unit *2

*1: An RS-232C COM port is required on the computer.

*2: An Ethernet port is required on the computer.

Building and Setting Networks

Easy to Build Networks Using Graphical Screen Operations

You can build a network and make device settings on a computer by dragging and dropping devices selected from the hardware list for virtual networks (equivalent to network configuration files) in the Configurator. Also, configurations can be downloaded to devices online and saved in files.

Setting Device Parameters

You can configure a network and edit device parameters by dragging and dropping device files in the virtual network in the Configurator when it is offline. This improves design efficiency.

Creating a Scan List with the Wizard (Conversational Settings)

You can use the wizard to easily allocate I/O and register Slaves to the Master to create a scan list.

And, you can easily check allocations to registered Slaves.

Supported OS

Name	OS	
	2000/XP	Vista/7
DeviceNet Configurator Software	Supported	Supported
OMRON DeviceNet Board	Supported	Supported (32bit)
	Supported	Not Supported
Molex DeviceNet Network Interface Cards USB Interface Module	Supported	Supported (32bit)

Online Connections

Connection from a DeviceNet Board for PC or Serial Port

Connections can be made online using a DeviceNet Board, DeviceNet Card, or OMRON CS/CJ-series PLC from the computer.

- You can directly connect to DeviceNet devices by using an OMRON PCI Board or PC Card through a DeviceNet Board or DeviceNet Card. (Nodes are allocated to the Board/Card.)
- Computer RS-232C COM Port Connection
Connections can be made using a peripheral port or a serial port on a Serial Communications Board/Unit of an OMRON CS/CJ-series PLC that has a DeviceNet Unit connected to the COM port on a computer.
- Computer Ethernet Port Connection
Connections can be made using an Ethernet Unit of an OMRON CS/CJ-series PLC that has a DeviceNet Unit connected to the Ethernet port on a computer.

Device Management and Monitoring

Monitor Devices While Connected Online

- Support for Network Downloading and Monitoring for Devices*

The following items can be monitored using an OMRON CS/CJ-series PLC.

- Overall communications status of network
- Status of Masters and Slaves
- Unit status
- Communications cycle time
- Error history

* This applies only to devices with the monitor function.

Upload Window

Building Maintenance Systems

Maintenance Systems Built with Smart Slaves

- Smart Slave Maintenance Information

Maintenance information stored in Smart Slaves can be read and used to build a maintenance system that functions separately from the control system.

*You cannot use the contact operation counter and the power ON time monitor at the same time.

Maintenance Mode Window

Configurator List

- Software only: WS02-CFDC1-E
- PC Card with software included: 3G8E2-DRM21-V1
(Applicable OS: Windows 2000 (ServicePack2 or higher)/XP)

DeviceNet Analyzer

WS02-ALDC1

Perform Diagnosis and Analysis for Networks by Directly Connecting to an OMRON DeviceNet PCI Board. Helps Improve Efficiency of Device Development and System Startup.

- Capture messages frames flowing on DeviceNet.
- Translate and display the captured message frames to easily perform diagnosis and analysis.
- Functionality is provided in the capture filter to display only messages that match the specified conditions.
- Set the trigger conditions for starting and stopping capture.
- Combine multiple conditions (e.g., AND, OR, THEN) for the trigger conditions.
- Display the traffic (load percentage) in a trend graph for each time interval (100 ms) to determine changes in the communications cycle time and to help determine system distribution.
- Display the percentage of a specified message frame relative to all message frames.

System Configuration

Ordering Information

Name	Applicable OS	Description	Model
DeviceNet Analyzer	Windows 2000 (Service Pack2 or higher)/XP	This software captures the required messages that flow on DeviceNet to diagnose and analyze the network.	WS02-ALDC1-E

Specifications		System Requirements
Basic Functions	Translation, capture buffer size settings, capture filter, capture trigger, capture export, frame time measurement, network traffic monitor, message frame traffic monitor	CPU Processor recommended by Microsoft.
Created files	NetInspector capture files (*.alz) Contents: Capture data files (saved or loaded), CSV-format of text (.txt) files, capture data export files	OS Windows 2000 (Service Pack2 or higher)/XP
System Requirements		Compatible Hardware
OMRON DeviceNet Board Special PCI Board: 3G8F7-DRM21		

NX-Server

WS02-NX□C1

Easily Perform Monitoring and Logging for Various Types of I/O Data on DeviceNet.

- Monitor I/O data flowing on DeviceNet.
- Log data of specified devices using advanced triggering.
- The NX-Server is equipped with a unique frame analysis engine, and so a node is not allocated to it.
- Collect data without increasing network traffic.
- The product lineup includes a development kit for developing a DDE server and applications as well as software for operating existing user applications.

(Logging Example)

Ordering Information

	Name	Applicable OS	Description	Model
NX-Server	For DeviceNet DDE Edition	Windows 2000 (Service Pack2 or higher)/XP	This software monitors and logs I/O data on DeviceNet lines.	WS02-NXDC1-E
	For DeviceNet SDK Edition			
	For DeviceNet RT Edition			

Logging

Logging can be performed by directly obtaining from the line the commands communicated between the specified Slaves and Master.

The logging data can be saved in an CSV-format file and analyzed in Excel.

- Set triggers to start logging or other processes simply by selecting device topics.
- You can set whether to perform logging for each device and also set the trigger conditions.

Monitor

Using the NX-Server, you can display in realtime the data of nodes specified in application software on a DDE interface, such as Excel.

- Display the data of all Slaves participating in a DeviceNet network.
- One optional function provided by the NX-Server lets you open a specific file (in this case, a set Excel file) at the same time that the NX-Server starts.
- Also, the NX-Server can be incorporated into monitoring software, such as Labview, in addition Excel.

NetXServer Functions

- Topic names and item names for data can be flexibly set for individual devices to monitor or log.
- Server name of DDE interface for user-disclosed interface: NETXNET.
- The size and format (bit, byte, or word) of data can be specified.
- Whether to log data for each device and setting the trigger conditions can be performed for each device.
- Logging data can be checked in standard CSV format.
- The NX-Server is equipped with a unique frame analysis engine, and so a MAC ID is not allocated.
- Data can be collected without increasing network traffic.

Product Introduction

- The NX-Server for DeviceNet DDE Edition is a dynamic data exchange (DDE) server that provides software to collect I/O data and perform host monitoring of the collected I/O data.
- The NX-Server for DeviceNet SDK Edition is a development kit for developing applications that use core modules of NetXServer for DeviceNet.
- The NX-Server for DeviceNet RT Edition is platform software to operate user applications developed using the SDK Edition.
- The 3G8F7-DRM21 PCI Board or 3G8E2-DRM21-V1 PC Card can be used for the hardware.

System Requirements for NX-Server for DeviceNet DDE Edition

CPU	Pentium 166 MHz or better
OS	Windows 2000 (ServicePack2 or higher)/XP
Created Files	NetXServer settings files (*.nxn) Logging data: CSV-format files (*.csv)

Compatible Hardware

OMRON DeviceNet Board or Card
Special PCI Board: 3G8F7-DRM21
Special PC Card: 3G8E2-DRM21-V1 *

* The hardware is included with the Configurator.
The applicable OS depends on the hardware. Check the requirements before operation.

Device Inspector

WS02-DIPC1

Software for Monitoring the Status of Devices on DeviceNet and Detecting Errors.

- Easily access the status of devices and present error details.
- View all CAN errors held by devices.
- Monitor device participation and withdrawal.
- Display error detection data with a time stamp and save the data to a file.
- Use a graph display of the network power supply voltage to monitor changes.

Ordering Information

Name	Applicable OS	Description	Model
Device Inspector	Windows 2000 (ServicePack2 or higher)/XP	One-license version Media: CD	WS02-DIPC1-E
		Site license	WS02-DIPC1-ELXX

Device Inspector Functions

Function	Description
Network diagnosis	Reads the status of network devices and monitors errors.
Device monitor	Enables monitoring the status of devices.
Maintenance	Enables displaying maintenance information for DeviceNet.
CAN error monitor	Monitors device CAN error data for DeviceNet.
Network power supply voltage monitor	Monitors device network power supply voltage for DeviceNet.
Message timeout monitor	Records the number of message timeouts for devices.
Error history	Leaves a record of error occurrence and recovery in a log.

System Requirements

CPU	Processor recommended by Microsoft.
OS	Windows 2000 (ServicePack2 or higher)/XP
Available hard disk space	50 MB min.
Memory	256 MB min.
Disk device	One CD-ROM drive
Display	SVGA or higher display

Communications Port

Online connection using serial port	RS-232C port
Online connection using USB port	USB port
Online connection using Ethernet	Ethernet port
Online connection using DeviceNet	DeviceNet Interface Card (3G8F7-DRM21 or 3G8E2-DRM21-V1 *)

* The hardware is included with the Configurator.
The applicable OS depends on the hardware. Check the requirements before operation.

● Peripheral Devices for Flat Cables

Product	Appearance	Model	Specifications
Connector for Flat Cable		DCN4-SF4D	Connector with lock screws for crimping flat cable
Conversion Connector for Standard Thin Cable and Flat Cable		DCN4-BR4D	Used as a set with a DCN4-TR4 when Thin Cable is branched on a branch line.
Power Supply Terminal Block with Terminating Resistance for Flat Cable		DCN4-TP4D	Can be used to supply communications power from terminals when Flat Cable is used.
Flat Connector Socket		DCN4-TR4	Used as a set with a DCN4-TR4 Flat Connector Plug in the following applications. <ul style="list-style-type: none"> Extending the trunk line T-branched the trunk line into branch lines
			Used alone in the following applications. <ul style="list-style-type: none"> Connecting a DCN4-TM4 Terminating Resistor to the trunk line
Flat Connector Plug		DCN4-BR4	Used as a set with a DCN4-TR4 Flat Connector Socket in the following applications. <ul style="list-style-type: none"> Extending the trunk line T-branched the trunk line into branch lines
Terminating Resistor		DCN4-TM4	Connector terminating resistor for flat cable. Attached to the DCN4-TR4 Flat Connector Socket at the end of the trunk line.
Flat Cable		DCA4-4F10	Four-core flat cable (UL 2555) Length: 100 m Conductor diameters: 0.75 mm ² x 2, 0.5 mm ² x 2
Simple Manual Crimp Tool		DWT-A01	This is the crimping tool for the following connectors: <ul style="list-style-type: none"> DCN4-TR4(-1) Flat Connector Socket DCN4-BR4 Flat Connector Plug DCN4-BR4D Conversion Connector for Standard Thin Cable and Flat Cable DCN4-SF4D Connector for Flat Cable

Specifications

● General-purpose Models (T-branch Taps)

Rated current	Between main lines: 8 A (power supply line) and 2 A (signal line)
	Between main and branch lines: 3 A (power supply line) and 1 A (signal line)
Insulation resistance	100 MΩ min. (at 500 VDC)
Dielectric strength	500 VAC for 1 min, leakage current: 1 mA max.
Ambient operating temperature	0°C to 55°C

Ordering Information

● International Standards

- The standards indicated in the "Standard" column are those current for UL, CSA, cULus, cUL, NK, and Lloyd standards and EC Directives as of the end of March 2009. (U: The standards are abbreviated as follows: U: UL, U1: UL Class I Division 2 Products for Hazardous Locations, C: CSA, UC: cULus, UC1: cULus Class I division 2 Products for Hazardous Locations, CU: cUL, N: NK, L: Lloyd, and CE: EC Directives.
- Ask your OMRON representative for the conditions under which the standards were met.

● Low Voltage Directive

Applicable Standard: EN61131-2
Devices that operate at voltages from 50 to 1,000 VAC or 75 to 150 VDC must satisfy the appropriate safety requirements. With PLCs, this applies to Power Supply Units and I/O Units that operate in these voltage ranges. These Units have been designed to conform to EN61131-2, which is the applicable standard for PLCs.

● EC Directives

The EC Directives applicable to PLCs include the EMC Directives and the Low Voltage Directive. OMRON complies with these directives as described below

● EMC Directives

Applicable Standards EMI: EN61000-6-4
EMS: EN61131-2 and
EN61000-6-2 (See note.)

manufacturing installations. OMRON PLCs conform to the related EMC standards so that the devices and machines into which they are built can more easily conform to EMC standards. The actual PLCs have been checked for conformity to EMC standards. Whether these standards are satisfied for the actual system, however, must be checked by the customer.

EMC-related performance will vary depending on the configuration, wiring, and other conditions of the equipment or control panel in which the PLC is installed. The customer must, therefore, perform final checks to confirm that the overall machine or device conforms to EMC standards.

Note: The applicable EMS standard depends on the product

List of Models

Masters

Product	Appearance	Specifications	Model	Standards
DeviceNet Unit		Model for CJ Series. Equipped with Master and Slave functionality. Control for up to 32,000 points per Master.	CJ1W-DRM21	UC1, N, L, CE
		Model for CS Series. Equipped with Master and Slave functionality. Control for up to 32,000 points per Master.	CS1W-DRM21-V1	

Note: Refer to the CJ1 Catalog (Cat. No. P052) for details on the CJ1.

Refer to the CS1 Catalog (Cat. No. P047) for details on the CS1.

Product	Appearance	Controller specifications	Display specifications		Ethernet port	Model *	Standards
			Display device	Resolution			
NSJ-series Programmable Controller		I/O capacity: 1280 points Program capacity: 60K steps Data memory capacity: 128K words (DM: 32K words, EM: 32K words x 3 banks)	5.7-inch color High-luminance TFT LCD	320 x 240 (QVGA)	10/100Base-T	NSJ5-TQ11(B)-G5D	UC1, CE, UL Type4

		8 inputs, PNP	GRT1-ID8-1		
		8 outputs, NPN	GRT1-OD8		
		8 outputs, PNP	GRT1-OD8-1		
		2 relay outputs	GRT1-ROS2	UC1, CE, L	
		4 AC inputs	GRT1-IA4-1 GRT1-IA4-2	UC1, CE, L	
Analog I/O Units		2 inputs (current/voltage)	GRT1-AD2	UC1, CE, L	
		2 outputs (current)	GRT1-DA2C		
		2 outputs (voltage)	GRT1-DA2V		
		2 temperature inputs (PT100 resistance thermometer)	GRT1-TS2P	UC1, CE, L	
		2 temperature inputs (PT1000 resistance thermometer)	GRT1-TS2PK		
Temperature input (resistance thermometer)		2 thermocouple inputs	GRT1-TS2T	UC, CE, L	
		1 counter input, 1 external output, NPN	GRT1-CT1	UC, CE, L	
		1 counter input, 1 external output, PNP	GRT1-CT1-1		
System Units		Right Turnback (Used to divide a SmartSlice I/O Terminal into blocks.)	GRT1-TBR	UC1, CE, L	
		Left Turnback (Used to divide a SmartSlice I/O Terminal into blocks.)	GRT1-TBL		
	Turnback Cable	--	Length: 1 m	GCN2-100	UC1 *2, CE, L
		Used if the total current consumption of the I/O power supply exceeds 4 A or to provide an I/O power supply on a separate system.	GRT1-PD2	UC1, CE, L	
			GRT1-PD2G	UC, CE, L	
			GRT1-PD8		
			GRT1-PD8-1		
		Used to add the V and G terminals for the I/O power supply.	GRT1-PC8 GRT1-PC8-1		
	End Unit *1		Required at the end of SmartSlice I/O Terminals.	GRT1-END	UC1, CE, L
Options	Terminal Block	--	Terminal block (5 blocks)	GRT1-BT1-5	--

*1. The End Unit is sold separately. (End Units are not included with Communications Units.)

*2. Use the GCN2-100 as a set with the GRT1-TBR and GRT1-TBL.

● MULTIPLE I/O TERMINALS

Product	Appearance	I/O points	Specifications	Model	Standards

* To use the software on Windows Vista or Windows 7, download the version upgrade program from the following OMRON website and apply it: www.fa.omron.co.jp/

Software

How to Select Required Support Software for Your Controller

The required Support Software depends on the Controller to connect. Please check the following table when purchasing the Support Software.

Item	Omron PLC System	Omron Machine Automation Controller System
Controller	CS, CJ, CP, and other series	NJ-series
Software	FA Integrated Tool Package CX-One	Automation Software Sysmac Studio

FA Integrated Tool Package CX-One

Product name	Specifications	Number of licenses	Media	Model	Standards
FA Integrated Tool Package CX-One Ver.4.0	<p>The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components.</p> <p>CX-One runs on the following OS.</p> <p>OS: Windows XP (Service Pack 3 or higher, 32-bit version) / Windows Vista (32-bit/64-bit version) / Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/64-bit version)</p> <p>CX-One Version 4.0 includes CX-Integrator Ver.3.0.</p> <p>For details, refer to the CX-One catalog (Cat. No. R134)</p>	1 license *1	DVD *2	CXONE-AL01D-V4	--

*1. Multi licenses (3, 10, 30, or 50 licenses) and DVD media without licenses are also available for the CX-One.

*2. The CX-One is also available on CD (CXONE-AL01C-V4).

Automation Software Sysmac Studio

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

Product name	Specifications	Number of licenses	Media	Model	Standards
Sysmac Studio Standard Edition Ver.1.00	<p>The Sysmac Studio is the software that provides an integrated environment for setting, programming, debugging and maintenance of machine automation controllers including the NJ/NX-serie CPU Units, NY-series Industrial PC, EtherCAT Slave, and the HMI.</p> <p>Sysmac Studio runs on the following OS.</p> <p>OS: Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/64-bit version)</p> <p>The Sysmac Studio Standard Edition DVD includes Support Software to set up EtherNet/IP Units, DeviceNet slaves, Serial Communications Units, and Support Software for creating screens on HMIs (CX-Designer).</p> <p>For details, refer to the Sysmac Integrated Catalogue (P072).</p>	-- (Media only)	DVD	SYSMAC-SE200D	--
		1 license *	--	SYSMAC-SE201L	--

● Models for Standard Cables

Product	Appearance	Specifications		Model
T-branch Tap for 1 branch line		Cable wiring direction: Toward top Cable lock direction: From top Connector screw direction: From top	Provided with 3 parallel clamp connectors with screws (XW4G-05C1-H1-D), standard terminating resistor	DCN1-1NC
		Cable wiring direction: Toward side Cable screw direction: From top Connector screw direction: From side	3 parallel connectors with screws (XW4B-05C1-H1-D), standard terminating resistor	DCN1-1C
		Cable wiring direction: Toward top Cable screw direction: From side Connector screw direction: From top		DCN1-2C
		Cable wiring direction: From side Cable screw direction: From top Connector screw direction: From top	3 vertical-type connectors with screws (XW4B-05C1-V1R-D), standard terminating resistor	DCN1-2R
T-branch Tap for 3 branch lines		Cable wiring direction: Toward top Cable lock direction: From top Connector screw direction: From top	Provided with 5 parallel clamp connectors with screws (XW4G-05C1-H1-D), standard terminating resistor	DCN1-3NC
		Cable wiring direction: Toward side Cable screw direction: From top Connector screw direction: From side	5 parallel connectors with screws (XW4B-05C1-H1-D), standard terminating resistor	DCN1-3C
		Cable wiring direction: Toward top Cable screw direction: From side Connector screw direction: From top		DCN1-4C
		Cable wiring direction: Toward side Cable screw direction: From top Connector screw direction: From top	5 vertical-type connectors with screws (XW4B-05C1-V1R-D), standard terminating resistor	DCN1-4R
Power Supply Tap		2 connectors, standard terminating resistor, fuse		DCN1-1P
Connector		Parallel clamp connector with screws (Connector insertion and wiring performed in the same direction)		XW4G-05C1-H1-D
		Parallel multi-branching clamp connector with screws (Connector insertion and wiring performed in same direction)		XW4G-05C4-TF-D
		Parallel connector with screws (Connector insertion and wiring performed in the same direction)		XW4B-05C1-H1-D
		Parallel connector with screws (Connector insertion and wiring performed in the same direction)		XW4B-05C4-T-D
		Parallel, multi-branching connector with screws (Connector insertion and wiring performed in the same direction)		XW4B-05C4-TF-D
		Orthogonal connector with screws (Connector insertion and wiring performed at a right angle)		XW4B-05C1-V1R-D
Special Cables		Thin cable Length: 100 m DCA1-5C10-B: Cable color: Blue DCA1-5C10: Cable color: Grey		DCA1-5C10(-B)
		Thick cable Length: 100 m DCA2-5C10-B: Cable color: Blue DCA2-5C10: Cable color: Grey		DCA2-5C10(-B)
Terminal-block Terminator		Resistance of 121 Ω		DRS1-T

● Models for Flat Cables

Product	Appearance	Specifications	Model	Standards
Connector for Flat Cable		Connector with securing screws for crimping flat cable	DCN4-SF4D	UC pending
Conversion Connector for Standard Thin Cable and Flat Cable		Used as a set with the DCN4-TR4 when Thin Cable is branched on a branch line.	DCN4-BR4D	UC pending
Power Supply Terminal Block with Terminating Resistor for Flat Cable		Can be used to supply communications power from terminals when flat cable is used.	DCN4-TP4D	UC pending
Flat Connector Socket		Used as a set with a DCN4-TR4 Flat Connector Plug in the following applications. • Extending the trunk line • T-branched the trunk line into branch lines	DCN4-TR4	UC pending
		Used alone in the following applications. • Connecting a DCN4-TM4 Terminating Resistor to the trunk line		
Flat Connector Plug		Used as a set with a DCN4-TR4 Flat Connector Socket in the following applications. • Extending the trunk line • T-branched the trunk line into branch lines	DCN4-BR4	UC
		Used alone in the following applications. • Connecting the communications cable to the Unit • Connecting the communications cable to a DCN4-MD4 Multi-drop Connector		
Terminating Resistor		Connector terminating resistor for flat cable. Attached to the DCN4-TR4 Flat Connector Socket at the ends of the trunk line.	DCN4-TM4	UC
Flat Cable		Four-core flat cable (UL 2555) Length: 100 m Conductor diameters: 0.75 mm ² x 2, 0.5 mm ² x 2	DCA4-4F10	UC
Special Crimping Tool		This is the crimping tool for the following connectors: • DCN4-TR4(-1) Flat Connector Socket • DCN4-BR4 Flat Connector Plug • DCN4-BR4D Conversion Connector for Standard Thin Cable and Flat Cable • DCN4-SF4D Connector for Flat Cable	DWT-A01	--

* Delivered in units of ten. Order in a multiple of ten.

● Environment-resistive Models for Thin Wires with M12 Microconnectors

Product	Appearance	Specifications	Model	
Sealed Assembling-type Connector (male)		For communications (plug)	XS2G-D5S7	
Sealed Assembling-type Connector (female)		For communications (socket)	XS2C-D5S7	
Sealed T-branch Connector		For 1 branch line	DCN2-1	
Sealed Connector with Terminating Resistor		Plug	DRS2-1	
		Socket	DRS2-2	
Cables with Sealed Connectors		Cable with connectors on both ends	Length: 0.5 m	DCA1-5CNC5W1
			Length: 1 m	DCA1-5CN01W1
			Length: 2 m	DCA1-5CN02W1
			Length: 3 m	DCA1-5CN03W1
			Length: 5 m	DCA1-5CN05W1
			Length: 10 m	DCA1-5CN10W1
		Cable with connector on one end (socket)	Length: 0.5 m	DCA1-5CNC5F1
			Length: 1 m	DCA1-5CN01F1
			Length: 2 m	DCA1-5CN02F1
			Length: 3 m	DCA1-5CN03F1
			Length: 5 m	DCA1-5CN05F1
			Length: 10 m	DCA1-5CN10F1
Shielded Panel-mounting Connectors (female)		Panel-mounting connector (socket)	Length: 0.5 m	DCA1-5CNC5P1
		Panel-mounting connector (socket)	Solder-cup terminals	XS2P-D522-2
		Panel-mounting connector (plug)	Length: 0.5 m	DCA1-5CNC5M1
		Panel-mounting connector (plug)	Solder-cup terminals	XS2M-D524-4

● Environment-resistive Models for Thick Wires with 7/8-16UN Miniconnectors

Product	Appearance	Specification	Model
Shielded T-branch Connector		T-branch Connector	DCN3-11
		T-branch Connector (Branch connector is M12)	DCN3-12
Shielded Terminating Resistor		Plug Connector	DRS3-1
Connectors with Shielded Cables		Cables with connectors at both ends	Length: 1 m DCA2-5CN01W1
			Length: 2 m DCA2-5CN02W1
			Length: 5 m DCA2-5CN05W1
			Length: 10 m DCA2-5CN10W1
		Cables with connector socket at one end	Length: 1 m DCA2-5CN01F1
			Length: 2 m DCA2-5CN02F1
			Length: 5 m DCA2-5CN05F1
			Length: 10 m DCA2-5CN10F1
		Cables with connector plug at one end	Length: 1 m DCA2-5CN01H1
			Length: 2 m DCA2-5CN02H1
			Length: 5 m DCA2-5CN05H1
			Length: 10 m DCA2-5CN10H1
		Cables with connectors at both ends Thin cable M12 socket	Length: 1 m DCA1-5CN01W5
			Length: 2 m DCA1-5CN02W5
			Length: 5 m DCA1-5CN05W5
			Length: 10 m DCA1-5CN10W5
Panel-mounting Connectors (Female)		Panel-mounting Connector Sockets with 0.5-m cable	DCA2-5CNC5P1
Panel-mounting Connectors (Male)		Panel-mounting Connector Plugs with 0.5-m cable	DCA2-5CNC5M1
Panel-mounting Connectors (Male)		Panel-mounting Connector Plugs DIP terminals	XS4M-D521-1

Introduction of the Switch Mode Power Supply

OMRON Switch Mode Power Supplies support a wide range of applications.

This power supply shows status, maintenance time, and other information

- Notifies you when the power supply needs maintenance, allowing maintenance at the optimum time. Helps reduce maintenance costs.
- Display monitor function makes it easy to check equipment startup.

* Only on types with an indication monitor

Simple power supply with a short body and easy installation: the ultimate in ease-of-use

- One of the shortest bodies in the industry makes it easy to design smaller and slimmer panels and devices.
- Front, top, DIN rail, and other installation types match the application and reduce installation man-hours.
- Fan-less up to 300 W, maintenance not necessary

*1. For details on approvals, visit our Web site (www.ia.omron.com/).

*2. Model S8JX-G15005□□ only, AC 100 - 120 V / AC 200 - 240 V marked number (DC input not available).

*3. The scope of application of EC directives and various safety standards (UL, EN, etc.) is AC 100 V to 240 V (AC 85 to 264 V).

Read and Understand this Catalog

Please read and understand this catalog before purchasing the product. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of the product in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.
Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons. Consult with your OMRON representative at any time to confirm actual specifications of purchased product.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

Note: Do not use this document to operate the Unit.
