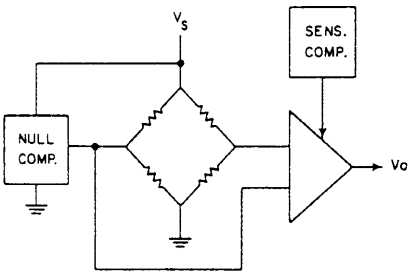
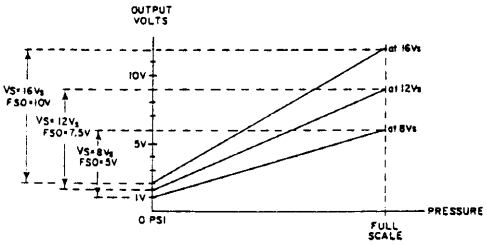
INTERNAL CIRCUITRY



NOTES

1. Terminals are labeled on the sensor.
2. Input and output share a common ground.
3. R_L must be greater than or equal to 3000 ohms.

RATIOMETRICITY



Ratiometricity refers to the output voltage being directly proportional to supply voltage. 160PC sensors in this catalog are calibrated at 8 VDC supply voltage to provide a 1-6 volt (5 V Span) output swing. For example, if supply increases by 50% to 12 VDC, the output voltage increased by 50% to 1.5-9 volts (7.5 V Span).

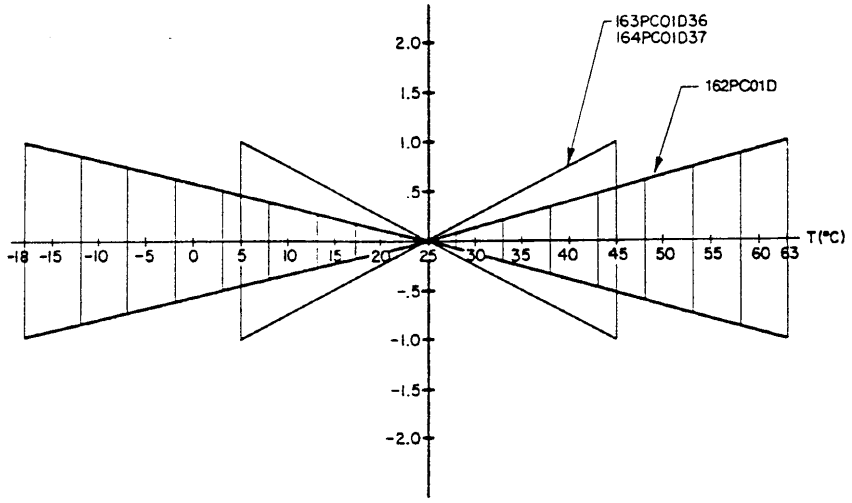
NOTE
The output is not perfectly ratiometric. See Accuracy specifications for the degree of error.

NULL AND SENSITIVITY TEMPERATURE SHIFT

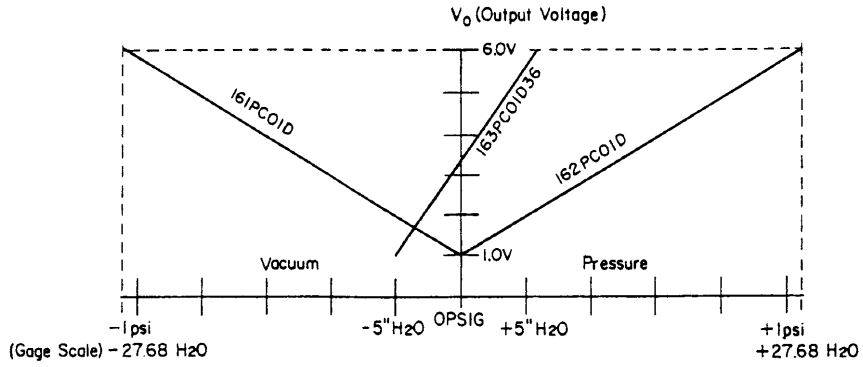
Amplified pressure sensor are 100% tested to insure that the maximum null and sensitivity temperature shift does not exceed the specification. The diagram below illustrates how null and sensitivity shift relates to temperature. Note that the maximum shift occurs at temperature extremes. Therefore, if a sensor is not exposed to the entire temperature range, the maximum null and sensitivity shift will actually be less than the value specified.

This diagram indicates the temperature shift pertaining to a few listings. Maximum null and sensitivity shift varies from listing to listing.

NULL AND SENSITIVITY SHIFT (% F.S.O.)



SCALING OF 160PC SERIES SENSORS WITH 8V EXCITATIONS



161PC01D	Vacuum Gage	V_O = 1 V at 0 psig & 6 V at -1 psig
162PC01D	Differential	V_O = 1 V at 0 psig & 6 V at 1 psig
163PC01D36	Differential	V_O = 1 V at -5" H_2O & 6 V at -5" H_2O

NOTE: 161PC sensors are scaled for greater pressure on the P1 side of the chip. 162PC sensors are scaled for greater pressure on the P2 side of the chip. Other scalings available upon request.
