WARNING

IMPROPER INSTALLATION

- Consult with local safety agencies and their requirements when designing a machine-control link, interface and all control elements that affect safety.
- Strictly adhere to all installation instructions.

Failure to comply with these instructions could result in death or serious injury.

WARNING

PERSONAL INJURY

- DO NOT USE these products as safety or emergency stop devices or in any other application where failure of the product could result in personal injury.

Failure to comply with these instructions could result in death or serious injury.

WARNING

MISUSE OF DOCUMENTATION

- The information presented in this catalogue is for reference only. DO NOT USE this document as product installation information.
- Complete installation, operation and maintenance information is provided in the instructions supplied with each product.

Failure to comply with these instructions could result in death or serious injury.

HONEYWELL SWITCHES AND CONTROLS

Honeywell switches and controls provide a wide selection of solutions. This catalogue contains our most popular offerings. To view our complete range of products, visit our web site at <http://www.honeywell.com/sensing>.

Honeywell is a worldwide leader in advanced switching and sensing technology. Our reputation for technology, quality and reliability is second to none. We have more than 60 years of experience; and extensive knowledge of a wide range of industries and an extensive customer service and support network.

Honeywell manufactures the original MICRO SWITCH brand switches: micro switches, toggle and rocker switches, hermetically and environmentally sealed switches, and relays and limit switches. Honeywell switches are aimed at providing an enhanced level of performance and quality.

Honeywell HOBBS brand is well known worldwide for the development of quality electromechanical products. The HOBBS brand includes hour meters and battery discharge indicators, key switches, off-highway

vehicular lighting, shifters, pressure and vacuum switches, and custom product development and rapid prototyping technology.

Honeywell's aerospace switches and controls are designed for the most stringent industry requirements. The portfolio consists of position, force, torque and pressure sensors, indicators and actuators. In addition to our standard product offering, Honeywell offers repair and overall services for highly engineered aerospace controls.

Honeywell continues to strive to solve customers' needs. Whether you need custom solutions or standard off-the-shelf products, our extensive in-house design, manufacturing and environmental testing capabilities offer solutions and alternatives to meet your needs.

How to use this catalogue

For each referenced listing, key specification parameters, descriptions and mounting drawing information are presented. These illustrate our capabilities while the specifications allow easy differentiation between similar products.

There are, of course, many more product options available. Full product specification may be accessed on our website (www.honeywell.com/sensing). At the Home page enter the catalog listing in the SEARCH box and click GO! This will take you directly to the interactive catalogue/specification search tables for this listing. Alternatively select and click the interactive catalogue icon on the Home page and then choose a product category against which to do a specification search.

Also on the website you can access installation instructions, application notes, Frequently Asked Questions (FAQs), selection guides and additional technical information.

Mounting dimensions

Mounting dimensions shown in each product section are for reference only. For exact information, request an engineering drawing from your nearest Honeywell sales office or visit our website and access it through the interactive catalogue. Where dual dimensions are shown on mounting drawings, the first or upper one is millimetres (mm) and the second or lower is inches (in). Where single dimensions are shown, they are millimetres (mm), unless otherwise stated.

To order these products

Simply contact your local Honeywell Sales Representative, your Honeywell Distributor or your local Honeywell office.

If you need a product not listed in this catalogue

One of Honeywell's strengths is in packaging of sensing technology to meet customer needs. Honeywell provides many variations of our basic switches and sensors. For more information, either browse the full interactive catalogue available on our website, or telephone the following numbers:

Select the right product – select the right supplier

Delivering excellence in system critical sensing solutions

A system is critical if the quality, reliability, delivery and customer service associated with a component part is essential to the performance of the operation or end product. If a sensor or a switch is critical to the performance, cost effectiveness, delivery or safety of a product or operation then it's system critical. It is therefore a defining element in the performance of the system under whatever conditions apply. Failure of the component - or failure of delivery of the component - results in lost productivity, increased costs or a catastrophic event such as a shutdown. Therefore selecting the right product is essential. It can make the difference between success and failure.

Honeywell Sensing and Control – delivering excellence

To select the right product, first select the right supplier. To deliver the right products for our customers' needs we listen to them to understand their needs. Using techniques such as "Voice of the Customer" and "Concept Engineering" we make sure that the products and solutions we deliver are the right ones. As part of Honeywell we can use local knowledge and understanding combined with global expertise and resources to achieve this. We can deploy many key technologies to bring innovative solutions to customers' problems.

Our products are manufactured to work well and to last. We use Six Sigma Plus productivity to ensure this is the case. We have award winning manufacturing facilities around the world and recognised world class business excellence in manufacturing and supply chain management to deliver on time, anywhere in the world.

Our e-business approach offers instant access to product information, technical support and application knowledge through our Internet site. Check out our powerful interactive catalogue that can search and find the right products for customers' needs and deliver a drawing ready for incorporation in a CAD system direct to your desk.

And of course, we manage our whole business for the benefit of our customers, using an acknowledged world-class business excellence approach that incorporates Six Sigma principles.

Expanded Product Lines

As well as many new and innovative switches, this catalogue includes an expanded range of Pressure and Position Sensors, previously known under the Clarostat, NEI and Electrocorporation brand names.

Industrial Electromechanical Limit Switches

Honeywell offers an advanced line of heavy duty limit switches and a wide selection of application-proven enclosed switches (precision snap-acting switches sealed in rugged metal housing). Sealed versions keep out moisture and other contaminants. Our products meet or exceed critical standards allowing for global use. Our rugged switches are suitable for use in harsh-duty, wash-down environments. We offer a variety of circuitry, terminations and actuators to ensure that you can match your choice of switch to your application.

Limit and enclosed switches are the cost effective switches of choice for detecting objects which can be touched. When an object comes in contact with an actuator, the switch operates. Rugged and dependable, these switches are offered in a variety of sizes, with different seals, enclosures, actuation, circuitries and electrical ratings. Enclosed switches are known for enhanced precision and low cost. Limit Switches are especially rugged and well sealed. Explosion proof switches are designed for use in hazardous locations.

The Honeywell switches featured here are all proven in a broad range of potential Industrial applications - machine tools, packaging machinery, lifting gear, presses and construction machinery.

More information about our complete product range - and the depth of product available within each product line - can be found on our interactive catalogue at www.honeywell.com/sensing.

MICRO SWITCH Brand products

Honeywell has been at the forefront of switching technology since we were the first to develop the precision snap-action switch more than 60 years ago. Ever since we introduced the Micro Switch Brand Products in 1937, we have been recognized as the performance standard that all other switches are measured against. We continue in that tradition by constantly improving the technology, cost-effectiveness, and delivery of these hardworking, versatile electromechanical switches.

WARNING

IF USED IN APPLICATIONS CONCERNING HUMAN SAFETY

- Only use NC direct opening ("positive opening"/ "positive break") contacts, identified by the symbol .
- Do NOT use flexible / adjustable actuators. Only use actuators designed for safety applications.
- Do NOT defeat, tamper, remove, or bypass this switch.
- Hazardous voltage, disconnect power before servicing.
- Strictly adhere to all installation and maintenance instructions.
- Consult with local safety agencies and their requirements when designing a machine-control link, interface and all control elements that affect safety.

Failure to comply with these instructions could result in death or serious injury.

Proper application of limit switches

The following are guidelines for the correct application of Limit Switches. Never use the Limit Switch as a physical end stop. Mechanical damage or incorrect operation may occur if this is done. Always ensure that the mechanical actuator is protected from excessive mechanical shock. Never release the actuator suddenly - gradual actuation and release will ensure that stress on the mechanics of the switch is kept to a minimum. This has the added benefit that the switch life will be improved. The diagrams illustrate how to actuate your limit switch for optimum performance.

Standards and Electrical rating

IEC/EN 60947-1 explains the general rules relating to **Low Voltage switchgear and controlgear**. The purpose of this standard is to harmonize as much as possible the product performance and test requirements for equipment where the rated voltage does not exceed 1,000 Vac or 1,500 Vdc.

IEC 60947-5-1 is part 5 of the general rules which relates to **Control-circuit devices and switching elements**, where rated voltage does not exceed 1,000 Vac or 600 Vdc. There are special requirements for control switches with direct opening operation. These switches are marked on the outside with this symbol:

The Contact Element form defines the configuration and number of contacts within the switch.

Form Za – both contact elements have the same polarity

Form Zb – the two contact elements are electrically separated.

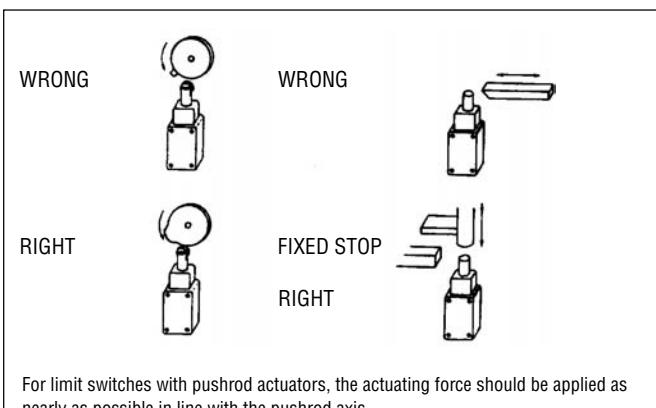

The **Utilization Category** defines the type of current carried – ac or dc – and the typical application where the switch is used.

The contact rating **Designation** relates to the Utilization Categories and defines the conventional thermal current I_{th} (a) rated operational current I_e (A) at rated operational voltages U_e and the VA rating.

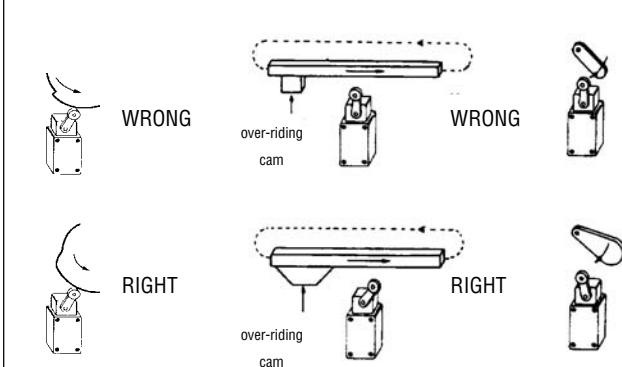

Actuators

A range of actuators is available for limit switches. Illustrations of actuator types available from this catalogue are shown at the beginning of each product family. Other actuators may be available - for more information please contact your local Honeywell office.

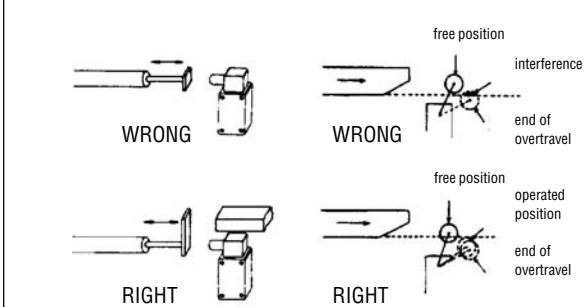

Roller lever	Top roller lever	Adjustable roller lever	Top pin plunger	Top pin plunger, boot seal	
Top roller plunger	Top roller plunger, boot seal	Top roller plunger, perpendicular	Top roller plunger, perpendicular, boot seal	Ball bearing plunger	
Side pin plunger	Side roller plunger	Roller lever	Yoke lever	Rod lever	Wobble head

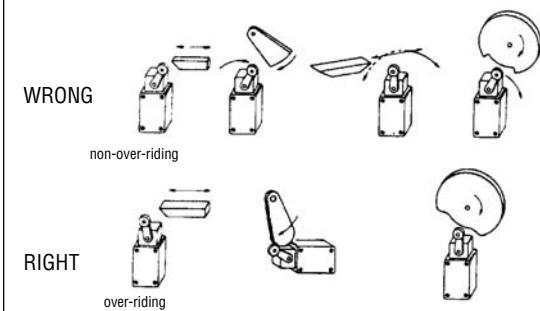

For limit switches with pushrod actuators, the actuating force should be applied as nearly as possible in line with the pushrod axis.

Cam or dog arrangements should be such that the actuator is not suddenly released to snap back freely.

Operating mechanisms for limit switches should be so designed that, under any operating or emergency conditions, the limit switch is not operated beyond its overtravel limit position. A limit switch should not be used as a mechanical stop.

For limit switches with lever actuators, the actuating force should be applied as nearly perpendicular to the lever as practical and perpendicular to the shaft axis about which the lever rotates.

A Note on Degrees of Protection

IP Classification

The **IEC 529** standard describes a system for classifying the degree of protection provided by the enclosures of electrical equipment. The level of protection given by the enclosure is indicated by the **IP code**. This code system uses the letters "IP" (International Protection) followed by up to four digits. Normally only the first two digits are used.

IP 1st Digit 2nd Digit 3rd Digit 4th Digit

The first digit is numerical and indicates the level of protection within the enclosure against the ingress of solid foreign objects and access to hazardous parts by persons.

The second digit is also numerical and indicates the level of protection against the ingress of **WATER** into the enclosure.

The third digit is a letter and indicates a higher level of protection for persons against access to hazardous parts.

The fourth digit is also a letter and is used in exceptional cases for supplementary information.

If the first or second digit is not required to be specified, then it is replaced by the letter "X" ("XX" if both digits are not required). While the tables below serve as a guide to the level of protection, Honeywell recommends that customers refer to the full official IEC specification for the exact definitions. If in doubt about the degree of protection required for a particular application, please consult your local Honeywell office.

Note:

The IEC 529 standard does not relate to protection against rust, corrosion, icing or corrosive solvents (e.g. cutting fluids) and that product coded IP 67 may not necessarily meet IP 66 requirements.

First Digit Protection against ingress of solid objects

IP TEST

0 no protection

1 protected against solid objects with a diameter greater than 50 mm

2 protected against solid objects with a diameter greater than 12 mm

3 protected against solid objects with a diameter greater than 2.5 mm

4 protected against solid objects with a diameter greater than 1 mm

5 protected against dust-limited ingress (no harmful deposit)

6 totally protected against dust

Second Digit Protection against ingress of water

IP TEST

0 no protection

1 protected against vertically falling drops of water

2 protected against vertically falling drops of water when the enclosure is tilted at an angle up to 15 degrees

3 protected against water sprayed at an angle of 60 degrees from the vertical

4 protected against splashing water from all directions – limited ingress (no harmful effects)

5 protected against low pressure jets of water from all directions – limited ingress permitted

6 protected against powerful jets of water from all directions – limited ingress permitted

7 protected against the effects of temporary immersion in water

8 protected against the effects of continuous immersion in water

NEMA Classification (USA)

NEMA (National Electrical Manufacturer's Association) prepares standards which define a product, process or procedure with reference to one or more of the following: nomenclature, composition, construction, dimensions, tolerances, safety, operating characteristics, performance, quality, electrical rating, testing and the service for which designed. This standard provides degrees of protection for Enclosures for Electrical Equipment (1000 Volts Maximum) similar to that of the IEC 529 standard. The reference standard herein reflects the latest data in the NEMA Standards Publication when this information went to print. Please check the most current NEMA Standards Publication for the latest information.

Non-hazardous locations

Type 1 enclosures are intended for indoor use primarily to provide a degree of protection against contact with the enclosed equipment.

Type 3 enclosures are intended for outdoor use primarily to provide a degree of protection against windblown dust, rain, sleet, and external ice formation.

Type 4 enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, and hose-directed water.

Type 4X enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water.

Type 6 enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against the entry of water during occasional temporary submersion at a limited depth.

Type 6P enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against the entry of water during prolonged submersion at a limited depth.

Type 12 enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, and dripping noncorrosive liquids.

Type 13 enclosures are intended for indoor use primarily to provide a degree of protection against dust, spraying water, oil and noncorrosive coolant.

Note:

Enclosures are based, in general, on the broad definitions outlined in NEMA Standards. Therefore, it will be necessary to ascertain that a particular enclosure will be adequate when exposed to the specific conditions that might exist in intended applications.

Except as might otherwise be noted, all references to products relative to NEMA enclosure type are based on Honeywell evaluation and Underwriter's Laboratory (UL) tested. This NEMA Standards Publication does test for environmental conditions such as corrosion, rust, icing, oil, and coolants. The IEC 529 does not, and does not specify degree of protection against mechanical damage of equipment. For this reason, and because the tests and evaluations for other characteristics are not identical, the IEC Enclosure Classification Designations cannot be exactly equated with NEMA Enclosure Type Numbers.

The EVN2000 series limit switch is an innovative product which has been developed to address a need highlighted by Original Equipment Manufacturers (OEM), where "Ease of Wiring" is required. With the new design there is no need for access to the inside of the housing and therefore the housing cover, cover screws and gasket become obsolete. Furthermore, the integrated cable gland eliminates the need for additional conduit or cable gland hardware. All Normally Closed (NC) contacts are Direct Opening.

CAT. LISTING
SZL-VL-A

The new economical SZL-VL Series miniature type limit switches are specially designed for potential applications of small mounting space. These miniature switches are ideal for OEM machinery which requires a rugged and reliable limit switch that is capable of being mounted in space restricted applications. A wide range of actuators and optional neon lamp indicators add additional flexibility. A special pre-molded flexible cable gland allows for fast and simple wiring termination.

Mechanical life:	up to 10 million operations
Sealing:	IP 64
Operating temperature:	-20 °C to 60 °C [-4 °F to 140 °F]
Approvals:	UL, C-UL, CE
Termination:	Cable gland
Contacts:	Gold plated silver
Electrical ratings:	250 Vac 125 Vdc max.
Ampere rating:	5 A @ 250 Vac max./0.4 A @ 125 Vdc max.
Switching options:	Single Pole, Double Throw, Double break (1NC/1NO)

GLS Series switches offer a complete range of CENELEC approved products, and are suitable for most potential industrial applications. The standard product EN 50041 norm defines the switch mounting centres as 30 mm x 60 mm and also defines the switching characteristics of the side rotary head with fixed lever, top pin plunger and top roller plunger. This means that the switch can be interchanged in the application with other EN 50041 switches with mounting and switching characteristics maintained. Honeywell offers many more head styles and switching options.

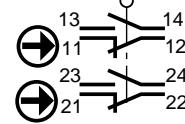

The miniature EN 50047 product range offers the user a choice of plastic, metal and three conduit versions which are all mounting (20 mm x 22 mm) compatible with each other. The EN 50047 standard defines how the switches are mounted and the switching characteristics for fixed side rotary lever, top pin plunger and top roller plunger.

Switching options:

SPDT Single Pole, Double Throw, Snap action contacts (1NC/1NO)

DPDT Double Pole, Double Throw Snap action contacts (2NC/2NO)

14CE/914CE Series Miniature Enclosed Switches

Actuators

The 14CE/914CE Series offers a miniature, rugged, compact, pre-wired switch which has gained wide market acceptance and performed successfully in a wide range of potential applications. The entire range of 14CE and 914CE switches has been approved to meet the requirements of the Low Voltage directive and is therefore CE marked.

CE switches have different degrees of protection from IP66 to IP68 for the fully booted head styles. The cable entry is fully potted using a special compound to ensure that ingress is virtually impossible.

24CE/924CE Series Miniature Safety Electromechanical Switches

Actuators

For position sensing and switching applications requiring direct acting, positive opening contacts the 24CE and 924CE ranges are ideal. They have been tested and approved to meet the requirements of the Low Voltage directive and positive opening safety contacts per IEC/EN 60947-5-1-3. The devices are CE marked. The red colour clearly differentiates this safety component in the application. The 924CE range also has UL and CSA approval.

It is possible for the end user to enhance the safety level of these switches from Category 1 on their own to Categories 2, 3 or 4 when the switches are used in conjunction with our wide range of FF-SR safety relays to form a safety system.

Potential applications for these switches could use the roller plunger 24CE2- or 24CE3- style in conjunction with cams on doors with hinges; or our fixed side rotary 24CE16- style for detection of sliding doors. Also available are a range of panel mounting or top mounting versions to ensure that small space or difficult mounting can be simply achieved.

Several contact arrangements are available.

Mechanical life:

10 million

LS Series Compact Limit Switches

LS Series compact limit switches are carefully designed for enhanced repeatability under the most stringent conditions. Compact size and field adjustable features greatly extend the flexibility of these switches. Heads may be positioned at 90° increments. Side rotary models can be adjusted for clockwise and/or counter-clockwise operation. Actuators can be set and locked in any position through 360°.

The rugged housings and actuator heads are constructed from cast aluminium, capable of withstanding physical abuse. Protection against oil, water and dust is achieved by O-ring seals on the actuator shaft; a ring seal between head and body; and a seated compression seal between cover and case.

The LS fits in many places too small for any other fully adjustable limit switch.

^{**} Resistive rating

⁽¹⁾ Designed for use with inductive loads such as relays, contactors, motors and solenoids. Honeywell does **not** recommend the use of silver cadmium oxide switch contacts in non-arc-ing loads. Non-arc-ing loads are generally loads less than 12 volts and/or 0.5 amp.

BF Series Plastic Enclosed Basic Switches

Actuators

BF Series Plastic Enclosed Basic Switches are available with a wide variety of actuators, and are designed for easy mounting and wiring. BF switches are designed to allow mounting with the cover either towards or away from the mounting surface.

Switches with lever type actuators are adjustable in two directions. The entire actuator can be rotated around its mounting bushing, and the angle of the lever can also be changed.

BZE/DTE Series

Compact Enclosed

Switches

The BZE/DTE Series general purpose enclosed limit switches offer enhanced precision operation and sturdy actuation in a compact but rugged metal housing. The large wiring enclosure means that the user can get access to wire the device simply. The switch incorporates high repeatability of the switch point early in the travel of the switch. This is achieved through a very tolerant over-travel mechanism aimed at reducing the effect of the application drift and the long-term accuracy of the switch.

E6/V6

E6 (side mount) and V6 (flange mount) switches are offered with or without actuator seal boots. Both have a combination insulator/ seal cemented inside the bottom enclosure. Lead washers are used to seal the mounting holes on side mount switches. All side mount switches are installed with #6 screws, except the BZE6-2RN7 (#8 screws). Removal of the bottom enclosure exposes the terminals for easy wiring.

The BAF/DTF Series is available with or without boot seals. The elastomer boot on sealed actuator versions protects the actuating mechanism and the internal basic switch from contamination. They are therefore potentially suitable for wash-down applications. Both sealed and unsealed versions are available with the actuators on the right or left hand side.

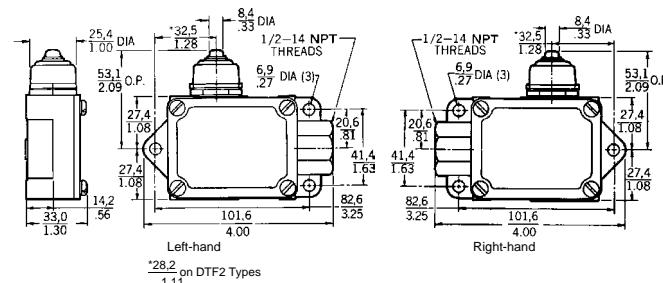

The cover plate is removable to allow ease of wiring and switch replacement without having to dismount the housing.

The BAF/DTF Series is potentially suitable for use in packaging equipment, farm machinery, conveyors, overhead cranes and hoists.

HDLS Series

Heavy Duty Limit Switches

Actuators

Levers: Levers for side rotary types are ordered separately (see pages 71-73 for details)

The HDLS Series Heavy Duty Limit Switches offer a wide choice of mounting and actuator options. Housed in a rugged, die-cast zinc body, the switch is epoxy coated for protection. Potential applications include harsh duty environments where conventional limit switches may not be used. Versatile and full featured, they are designed for long life.

Listings referenced in this section are mainly standard. Low temperature and fluorocarbon (FC, high temperature) construction is available in all forms of HDLS limit switches. For temperature ranges see table opposite. Also available are factory sealed, pre-wired switches.

Low temperature switches have fluorosilicone diaphragm, shaft seals and external boot seal (where applicable) plus a low temperature lubricant. If prewired with cable, temperature limits are -10 °C [14 °F] flex and -30 °C [22 °F] no flex.

To order a low temperature version insert the additional letters **Y** and **B** as in the following example:
LSA1A - standard side rotary plug-in switch
LSYAB1A - low temperature version.

Completely fluorocarbon (FC) sealed, high temperature, chemical resistance switches have a full FC body gasket covering the switch cavity. Rotary types have an extra FC seal on the operating shaft, while plunger versions have FC boot seals. They are for use in potential applications where the environment includes fire-resistant synthetic fluids. The additional FC seals also promote enhanced operating life for rotary actuated HDLS switches in applications where the temperatures are normally -12 °C to 121 °C [10 °F to 250 °F]. If prewired with cable, temperature limits are 105 °C [221 °F] dry and 60 °C [140 °F] wet.

To order a fluorocarbon (FC) sealed switch insert the additional letters **Y** and **C** as in the following example:

LSA1A - standard side rotary plug-in switch
LSYAC1A - completely FC sealed version.

Factory sealed, pre-wired limit switches have the entry area completely sealed and are available with 6 ft [1,83 m], STOOW-A cable or 4, 5 or 9-pin connectors. NEMA ratings are, for cable version 1, 4, 6, 6P, 12, for connector version 1, 4, 6, 6P, 12, 13.

To order a factory sealed switch add the appropriate letter:

Circuitry	Cable	1/2 in Connector (available with 1/2 in conduit tap only)
-----------	-------	---

SPDT	C	A (4 pin mini)
------	----------	-----------------------

	B (5 pin mini)
--	-----------------------

	DD (4 pin micro)
--	-------------------------

DPDT	M (3/4 in only)	R (9 pin)
------	------------------------	------------------

Example:

LSA1AC - LSA1A with 6 ft of 5 conductor STOOW-A cable

LSJ2BM-7N - LSJ2B-7N with 6 ft of 9 conductor STOOW-A cable

LSA1AB - LSA1A with 5 pin receptacle

LSA1ADD - 4 pin micro-change connector

Electrical ratings

10 amps continuous carry. Circuits on any one pole must be the same polarity.

Plunger actuated switches

HDLS plunger actuated switches are available with either top or side facing plungers for application flexibility. Switches with adjustable plungers simplify installation. They have a hex setscrew and locknut on the plunger, providing an adjustment range of 0.25 in [6.35 mm].

Assembled conditions

The listing shown are factory assembled with side plungers facing front (label side of switch); rollers on side plungers are in horizontal position. Rollers on top plunger switches are parallel to mounting surface. Other options are available. Contact Honeywell for more information.

Fully potted HDLS

Fully potted HDLS are designed to meet the demanding requirements of NEMA 1, 3, 4, 6, 6P and 13 for wet applications where the integrity of the conduit seal must be assured. These switches are the same as the standard HDLS non plug in limit switch except that the conduit entrance is factory sealed to simplify installation and ensure integrity of the conduit seal. They are epoxy filled and supplied with six feet of 5 or 9 conductor 16 gauge STO cable. Fully potted HDLS are built with all Fluorocarbon seals. Sealing exceeds Nema 6P. Low temperature versions are available, see page 46 for temperature range and how to order.

Approvals:

Connector NEMA 1, 4, 6, 6P, 12, 13

Stainless steel HDLS

HDLS stainless steel switches are designed for use in highly corrosive environments such as petro-chemical plants, food processing plants, shipboard and dockside locations. The type 316 cast stainless steel body is designed to minimise crevices where food particles could become trapped. The actuator, operating head and screws are also stainless steel. All seals are Fluorocarbon to provide excellent chemical resistance and to withstand operating temperatures up to 121 °C [250 °F] and pressurised steam cleaning.

Approvals: NEMA 1, 3, 3R, 4, 4X, 6, 6P, 12, 13

Hazardous location switches

Honeywell explosion proof switches are designed specifically for use in hazardous locations. To comply with explosion-proof requirements, the flame path within the housing is designed to contain and cool the escaping hot gases that otherwise could cause an explosion outside the switch.

Switches are available with UL/CSA for North America. See information below and product pages for details. In Europe, the usage is governed under the European Directive on Equipment and Protective Systems Intended for Use in Potentially Explosive Atmospheres (94/9/EC) commonly referred to as the ATEX Directive.

The BX, CX and GXE product families comply to the following ATEX Directive: EExd IIC T6 Category II 2 GD

The 14CE100 product family complies to the following ATEX Directive: EExd IIC T6 Category II 2 G

NEMA TYPE 7, CLASS I FLAMMABLE GASES OR VAPORS

Type 7 enclosures are for use indoors in locations classified as Class I, Groups B, C, or D by the National Electrical Code.

Group B — (only switches so noted in the order guides include this listing). Atmospheres containing hydrogen or manufactured gas.

Group C — atmospheres containing diethyl ether, ethylene, or cyclopropane.

Group D — Atmospheres containing gasoline, hexane, butane, naphtha, propane, acetone, toluene or isoprene.

Division 1

Locations in which hazardous agents are present under normal operating conditions.

Division 2

Locations in which hazardous agents may be present only in case of accidental rupture or breakdown.

All Honeywell listings covered in Division 1 are also covered in the same groups in Division 2.

NEMA TYPE 9, CLASS II COMBUSTIBLE DUSTS

Type 9 enclosures are for use in indoor locations classified as Class II, Groups E, F or G, as defined in the National Electrical Code.

Group E — Atmospheres containing metal dust.

Group F — Atmospheres containing carbon black, coal dust or coke dust.

Group G — Atmospheres containing flour, starch or grain dust.

ATEX EExd

GXE Series Explosion Proof Limit Switches

Actuators

GXE Series

Operating force max. (OF): 16 N [3.6 lb]

The GXE Series explosion proof limit switches are designed specifically for use in hazardous applications. The GXE enclosure is fully potted and has sealing protection of IP66/67 as per IEC/EN 60529. The entire GXE Series complies with the European Directive on Equipment and Protective Systems Intended for Use in Potentially Explosive Atmospheres (94/9/EC) commonly referred to as the ATEX Directive.

Mechanical life:

The EX Series features the smallest UL listed housings available for use in hazardous locations. Flame paths within the housing are designed to cool exploding gases below the kindling temperature before they reach the explosive gases surrounding the housing.

Options available include single or double conduit connection.

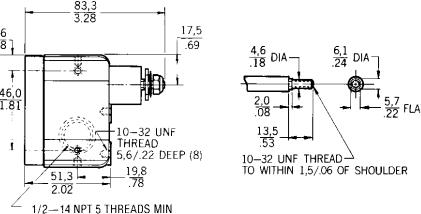

These switches are not sealed against liquids and should not be used where there will be liquid splash. If a weather sealed explosion proof switch is required please select from the CX or LSX/BX series.

CX Series

Weather Sealed

Explosion Proof

Switches

Actuators

CX switches, as are the LSX/BX Series, are built especially for outdoor use in hazardous atmospheres. These enclosures are constructed to withstand the pressure of an internal explosion.

O-ring seals make the enclosure weatherproof but are outside of required flame paths so explosion proof requirements are maintained.

As factory assembled, all basic switches operate on clockwise and counterclockwise rotation. The actuating mechanism can be field adjusted for CW or CCW operation only.

Analog output, 4 mA to 20 mA, is available.

Basic switches operate nearly simultaneously in multiple switch devices.

Shafts of devices without shaft restoring force can be rotated through 360°.

LSX/BX Series weather sealed, explosion proof limit switches are for use either indoor or outdoors in hazardous atmospheres. They are completely sealed and designed for use in explosive gas/dust environments.

LSX/BX products meet the sealing standards of NEMA 1, 3, 4, 6, 7, 9 and 13. BX products are also sealed to IP67 standard and are ATEX approved (see specifications below).

All heads are field adjustable at 90° increments. Heads with side rotary actuators can be adjusted for clockwise and counter clockwise operation.

Levers

Separate levers must be ordered with side rotary types. The table provides a cross reference between product families and the lever order/reference numbers. The following pages describe the levers. Illustrations are for reference only. Exact mounting drawings and dimensions are available from your local sales office or from the website below.

Levers lock in any position, 360° around the shaft. Rollers may be mounted on the front or back of the lever.

All levers are supplied with cap screws.

Explosion proof switches

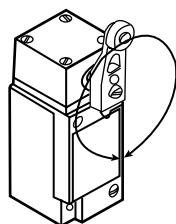

Because of explosion proof requirements, only nylon rollers or other non sparking material should be selected. BX/LSX, CX and EX plunger and cat whisker types are of non sparking material. **Do not mix or substitute.**

Specification (unless stated otherwise)

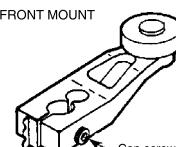

Lever radius/length:	1.5 in [38,1 mm]
Roller Diameter:	0.75 in [19,1 mm]
Roller Width:	0.25 in [6,35 mm]
-EX	0.312 in [7,92 mm]

Note:

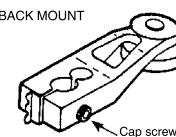

Not all levers are compatible with all switches

SZR-MY Series Power Relay

SZR-MY Series general-purpose power relays are designed for a wide range of potential applications including power, as well as logic control, for factory machines and control panels.

SZR-MY Series relays have a small package design for multiple application needs. Relays are available in two configurations: DPDT with a 5 A load and 4PDT with a 3 A load. One standard and three options are available: LED indicator, internal surge protection diode, and LED indicator/diode protection.

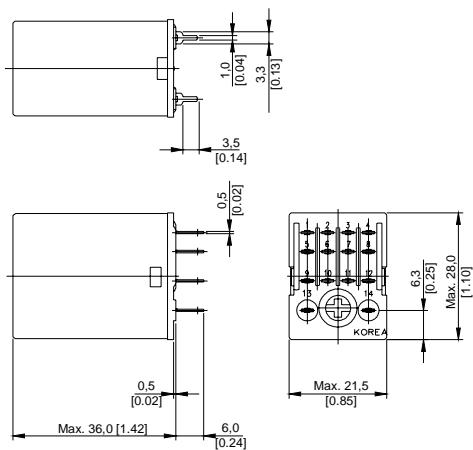

Current rating (SZR-MY2):	5 A
Current rating (SZR-MY4):	3 A
Contact resistance:	50 mOhm max.
Contact material:	Fine silver
Agency approvals:	UL, CE, CSA
Operate time:	20 ms max.
Release time:	20 ms max.
Ambient temperature:	-25 °C to 75 °C [-13 °F to 167 °F]
Ambient humidity:	45% RH to 85% RH
Switching options:	DPDT, 4PDT

Electromechanical Safety Switches

Honeywell is a worldwide leader in advanced switching and sensing technology - especially in the area of industrial safety. We offer both electromechanical safety switches and electronic safety sensors as well as safety control modules for safety applications in all categories of risk. Our diverse product line can help customers meet all of their machine safety needs.

Honeywell products meet or exceed European machine safety standards and have been approved (CE, INRS) for use in Europe for more than 25 years. As North America moves toward harmonizing with global standards, machine builders and users can confidently turn to Honeywell for compliant machine safety solutions. Our products are designed to meet all applicable OSHA and ANSI standards.

Refer to pages 6 and 7 for more information about degrees of protection and electrical ratings.

Protective Guarding

Protective guarding around a dangerous machine can be achieved with tamper-resistant safety switches. Safety switches incorporate positive opening operation such that even a welded contact will be mechanically broken and a stop signaled. These switches monitor the position of moveable guards and doors, which are used to safeguard access to equipment and provide protection from ejected pieces, chips, projectiles or oil. These safeguards require a relatively low investment and can provide reliable protection if they are regularly checked and maintained.

Cable Pull Switches

Cable-pull limit switches serve as a readily accessible means of emergency stop for applications. These cable-pull devices are visible, accessible and easy to use and are designed to immediately open the emergency stop circuit when activated.

WARNING

IMPROPER INSTALLATION

- Consult with local safety agencies and their requirements when designing a machine-control link, interface and all control elements that affect safety.
- Strictly adhere to all installation instructions.

Failure to comply with these instructions could result in death or serious injury.

Safety Key

Operated Switch

Used alone as Category 1 safety components or, in conjunction with other safety switches and our complete range of safety relays, it is possible to construct comprehensive protection schemes with Category 2, 3 or 4 compliance.

The preloaded versions are designed to allow rapid fit, easy cable routing and function testing which cut costs dramatically in OEM applications. Simple upgrade guarding solution for End User applications.

Low energy basic switches are rated as follows:

Operating Voltage Ue 1 Vdc to 60 Vdc or 1 Vac to 125 Vac

Operating Current Ie 1 mA to 50 mA

Example of catalog listing using a low energy basic switch - GKMA19

Mechanical life:

> 1 million

Sealing:

IP66/67, EN 60529, NEMA 1, 12, 13

Operating temperature:

-25 °C to 85 °C [-13 °F to 185 °F]

Approvals:

CE, UL, CSA

GSS Series

Hinge Mount Safety Limit Switch

The Hinge Mount Safety Limit Switch is designed for use on machine access doors as an alternative solution to key operated interlocks and safety limit switches. When the access door is opened, a follower pin (not supplied) slides down the slot in the actuator lever, forcing the actuator lever to rotate and positively open the NC safety circuit to shut off the machine. Closing the access door rotates the actuator lever to the reset position, closing the NC safety contacts.

The Hinge Mount Safety Limit Switch minimizes alignment problems because it may be offset-mounted from the hinge point of the door. The tamper-resistant design and the positive opening contacts provide an enhanced level of safety over the conventional spring-driven limit switches often used to monitor door position.

Low Energy Switching

In today's demanding age of low energy controls, electromechanical switches are frequently used to interface directly with safety relays, PLCs and other low energy devices. To accommodate this requirement GSS offers a new gold plated contact version of the standard basic switch. This improves reliability of switching at low currents and voltages by protecting the contact surfaces from contamination during operation or storage prior to use.

Standard silver contacts have a disadvantage in that the contact surface may tarnish under certain environmental conditions, e.g. in the presence of moisture.

Low energy basic switches are rated as follows:

Operating Voltage Ue 1 Vdc to 60 Vdc or 1 Vac to 125 Vac

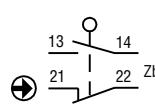

Operating Current Ie 1 mA to 50 mA

Example of catalog listing using a low energy basic switch - GSCB33S2.

GK Series

Dual Entry Key Operated Safety Interlock Switch

The GK Series is designed specifically for use on machines where key removal brings the machine to an immediate safe condition. It provides enhanced operator safety when added to hinged or sliding guard doors, screens and protective covers on enclosures. The GK Series is especially well suited for large door applications, typically in the automotive plant floor environment. Its heavy duty construction withstands harsh industrial environments where rugged, long-term durability is required.

Nearly 1000 options are available in a simple to understand part number tree.

A safety lockout device is also available for use with the GK Series. The lockout device (GKZL2) is specifically designed to prevent a key from being inserted either manually, or by the access door being closed while maintenance personnel are working on the machine. When inserted, the lockout device can accommodate up to four padlocks to prevent unauthorised removal of the device.

GKL/GKR Series

Dual Entry Solenoid

Key Operated

Safety Interlock

Switch

The GKR (head to the right) and GKL (head to the left) products offer the user an unrivalled range of standard options.

The GKR/GKL product is a key actuated device incorporating a key trapping mechanism. The switch is used on machinery where instant stop and access to the machinery is either impossible (due to the momentum of the machine) or impractical (due to tool or machine damage or scrapped product if the current machine cycle is interrupted).

The switch incorporates an optional manual override feature which allows removal of the key for emergency access.

Over 1000 options are available in a simple to understand part number tree.

A safety lockout device is also available for use with the GKR/GKL Series. The lockout device (GKZL2) is specifically designed to prevent a key from being inserted either manually, or by the access door being closed while maintenance personnel are working on the machine. When inserted, the lockout device can accommodate up to four padlocks to prevent unauthorised removal of the device.

CPS Series Cable Pull Safety Switch

CPS Series Cable Pull Safety Switches provide a readily accessible emergency stop signal. This is a cost-effective means compared to using multiple emergency stop push-buttons. (Cable Pull Safety Switches are not, however, to be used as a means of personnel safeguarding. They may be used to prevent further injury or damage to equipment when used for emergency stop signaling.)

The CPS Series Cable Pull Safety switch is designed to provide emergency stop protection for exposed conveyor and assembly lines. The internal mechanism latches on both slackened cable (push) and pulled cable. This capability also enhances productivity by eliminating nuisance stops due to variations in temperature, stretch of cable over time, and other application variables.

The 1CPS is intended for use in applications where the cable span is 76 m [250 ft] or shorter. It is a potential economical solution for shorter runs or zone protection typical to automated systems. The 2CPS series is intended for use in very long cable runs of 152 m [500 ft] or shorter, such as long conveyor lines found in warehouses.

The CPS complies with: Low Voltage Directive 73/23/EEC, as amended by directive 93/68/EEC; Machinery Directive 98/37/EEC only as the directives relate to the components being used in a safety function; IEC/EN 60947-1; IEC/EN 60947-5-1; IEC/EN 60947-5-5.

Basic Switches

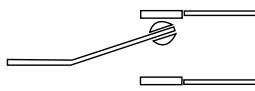

BZ/BA/BM/BE Series Basic Switches

BZ/BA/BM/BE Series standard basic switches may be used for simple or precision on/off application needs.

As well as the catalogue listings presented here, we offer other versions with higher temperature ratings, different termination options, different electrical ratings and Single Pole, Single Throw (SPST) circuitry. Refer to our Web site for details.

Voltage:	250 Vac
Electrical rating:	up to 25 A
Operating temperature:	-55 °C to 85 °C [-67 °F to 185 °F]
Termination:	Screw
Contact type:	Silver
Approvals:	CE, CSA, UL, ENEC
Switching options:	Single pole, double throw (SPDT)

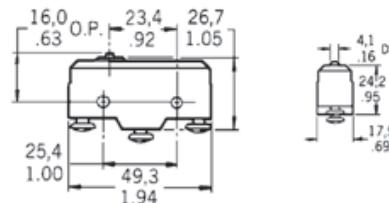

These listings include standard size basics, miniature and subminiature switches. The precision snap-action mechanisms are offered with a wide variety of actuators and operating characteristics. Basic switches are often ideal for applications requiring compactness, light weight, accurate repeatability and long life.

They are best used for presence/absence detection where physical contact with object is permissible. Very economical.

Basic Switch Accessories

A range of accessories is available for BZ, BA, BM, BE and DT switches, such as the 5PA2 terminal enclosure. For more information please contact your local sales office.

TB Series Miniature Double-break Basic Switches

TB Series miniature double-break basic switches are basic double-break units that offer a means of controlling isolated circuits. Each circuit may be driven by an independent voltage source.

Voltage:	250 Vac
Electrical rating:	10 A
Operating temperature:	-55 °C to 125 °C [-67 °F to 257 °F]
Termination:	Solder
Contact type:	Silver
Approvals:	CSA, UL
Switching options:	Single pole, double throw, double break (SPDT DB)

SM and SX Series Subminiature Basic Switches

SM and SX Series subminiature basic switches may be used for simple or precision on/off application needs. These switches combine small size and light weight with ample electrical capacity, precision operation and long life. The SX Series are small, precision, snap-action switches that are often ideal where savings in space and weight are important.

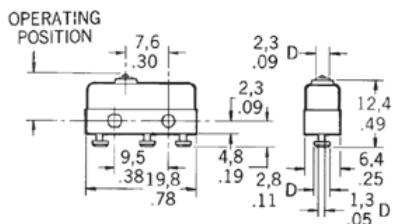

Voltage:	250 Vac
Operating temperature:	-55 °C to 125 °C [-67 °F to 257 °F]
Termination:	Solder

Pressure Switches

Honeywell has over 60 years of experience in the pressure switch industry. A wide variety of pressure ranges, along with a wide choice of mounting, package, and port configurations allows customers to choose from standard off-the-shelf designs.

All Honeywell pressure switches feature excellent repeatability, enhanced accuracy and reliability under varying environmental conditions. In addition, they feature highly consistent operating characteristics from one sensor to the next and interchangeability without recalibration.

Pressure Switches

Honeywell's pressure and vacuum switches are designed for use in heavy duty equipment. They are suitable for potential applications that are constantly subjected to harsh environments, such as chemical splashes, salt water or pressure spikes.

The products listed are standard switches, but other circuitry and terminal options are available. Switches can be customised to customer requirements, contact your local Honeywell sales office for more information.

Operating temperature:	-40 °C to 122 °C [-40 °F to 250 °F]
Termination:	#8-32 screws
Connector:	1/8-27 NPT male thread
Contacts:	Silver alloy, gold plated
Electrical rating:	Resistive
	15 A, 6 Vdc
	8 A, 12 Vdc
	4 A, 24 Vdc
	Inductive
	1 A, 120 Vac
	0.5 A, 240 Vac
Circuitry:	SPST-NO (Normally open)
	SPST-NC (Normally closed)

5000 Series Extended Duty Switch

Set point range -

0.5 psi to 150 psi [0.035 bar to 10.35 bar]

This pressure switch was designed to stand up to extended duty applications. It is factory set but is capable of being field adjusted. The Kapton diaphragm is compatible with a wide variety of media with the exception of water. An optional Teflon diaphragm is available when water is the operating media.

Other options are available - SPDT, NO/NO or NC/NC circuitry and blade or integral Packard MetriPack terminals - contact Honeywell sales office for details.

Operating pressure:

Set point range	0.5 psi to 24 psi = [0.0345 bar to 1.656 bar] =	150 psi [10.350 bar]
	25 psi to 150 psi = [1.725 bar to 10.350 bar] =	250 psi [17.237 bar]

Proof pressure: 500 psi (34.474 bar)

Burst pressure:

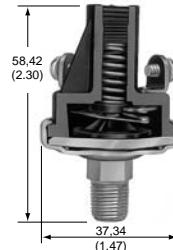

Set point range	0.5 psi to 24 psi = [0.0345 bar to 1.656 bar] =	750 psi [51.711 bar]
	25 psi to 150 psi = [1.725 bar to 10.350 bar] =	1250 psi [86.185 bar]

NOTE

Operating Media (Pressure Switch)

The pressure switch is designed to operate with air, motor oils, transmission oils, jet fuels and other similar hydrocarbon media.

Direct action blade contacts, 2 terminals

5000 Series Extended Duty Vacuum Switch

Set point range -
1.1 in to 22.0 in Hg
[27.94 mm Hg to 558,80 mm Hg]

The 5000 Series Extended Duty Vacuum switch is designed for vacuum applications. The factory setting cannot be changed or adjusted in the field. It features a fluorosilicone rubber diaphragm that is compatible with a wide range of media.

Blade terminal option is also available.

5000 Series Extended Duty Piston Switch

Set point range -
70 psi to 1000 psi [13.80 bar to 68.95 bar]

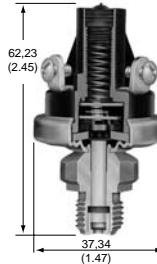

This switch is a variation of the "standard" 5000 Series Extended duty switch for applications requiring a compact package size, enhanced set point and operating characteristics.

Other options are available - SPDT, NO/NO or NC/NC circuitry and blade terminals - contact Honeywell sales office for details.

Termination:	#8-32 screws or 280 Series MetriPack
Connector:	1/2-20 UNF [O-ring fitted]
Operating pressure:	1000 psi [68.95 bar]

Mating connector - Packard Part Number 15300027

5000 Series Ultra Duty Switch

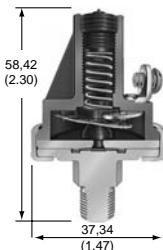

Set point range - 10 psi to 400 psi [0.69 bar to 27.60 bar]

The 5000 Series Ultra Duty pressure switch is designed for high pressure/low set point applications that can experience sudden pressure spikes and high system pressures. Screw machined and heat treated components along with a reduced effective area in the pressure cavity allow improved performance over the standard extended duty 5000 Series.

Other options are available - Dual Circuit (SPDT) configuration and blade or integral Packard MetriPack terminals - contact Honeywell sales office for details.

Pressure Switches - Customised (continued)

Series V

High Pressure, Environmentally Sealed, Extreme Duty Switches

Set point range -

35 psi to 3000 psi [2.415 bar to 206.84 bar]

The Series V features a snap action switch with gold-plated contacts that provides hysteresis, low contact resistance, enhanced transfer time and an adjustable differential.

OPTIONS

Diaphragm switch, snap action contacts

Set point range -

35 psi to 300 psi [2.415 bar to 20.70 bar]

The diaphragm material is fluorosilicone and is compatible with air, motor and transmission oil and other hydrocarbon media.

Environment Sealed, Hermetically Sealed and Manual switches

Most of the products in this section have one thing in common - they are sealed to withstand harsh environments.

You will find them in such diverse places as landing gears, flaps, cargo doors and cockpit panels. Environmentally sealed products also satisfy needs in many other potential applications. Some examples are agriculture, transportation, construction, marine, ordnance and command and control equipment.

Our commitment to quality products begins with the design of the products. Marketing, design and manufacturing engineering personnel review the customer specifications and translate them into design and manufacturing instructions. Every product Honeywell manufactures, be it an aerospace, industrial or commercial design, follows a single, uniform system of quality assurance. This helps ensure the same high level of reliability in all our products. Our aim is to build in quality.

We have evaluation test labs that can subject our designs to most every test and environmental condition known to exist in our world or in outer space. Test equipment includes - electrical and mechanical life cycling devices, high-low temperature chambers, hydrostatic pressure chambers, impact shock machines, vibration equipment, centrifugal acceleration equipment, humidity and salt spray chambers, and dielectric strength testing equipment.

To ensure you have the latest information on our product offering, contact Honeywell.

Switch load/life

Switch life depends on such criteria as electrical load, environment, switch mechanism and other factors peculiar to the application. As electrical load increases, switch life decreases. For military qualification testing 25,000 operations electrical life at rated load (maximum recommended load) is the minimum operations required. In most cases switch life exceeds 25,000 operations when operated at electrical loads less than rated load. Below one amp, the electrical life approaches the mechanical life of the switch. If your application requires more than 25,000 cycles and your electrical load is less than rated load, please contact Honeywell for application assistance.

Sealed basic switches and switch assemblies

Basic switches are either environment sealed or hermetically sealed. The environment sealed basics have a watertight seal and most meet military specifications. Limit switches are environment sealed or hermetically sealed and some are suitable for high temperature applications. Most switches meet appropriate military requirements. Environment sealed limit switches come in a choice of sizes and are offered for military aerospace and commercial aircraft applications. Hermetically sealed switches withstand temperatures up to 125 °C [257 °F], and high temperature hermetically sealed switches will operate in temperatures up to 334 °F [615 °F].

Manual control switches

Standard size and some miniature toggle switches have bushing seals and are military qualified. Rocker switches also have a bushing seal. Rockers are easy to remove and are available in a variety of colours. Magnetically held toggle switches contain a holding coil to maintain the toggle in the operated position. They have environment sealing, and most are military qualified.

Basic switches operating characteristics

Electromechanical switches

Definitions below explain the meaning of operating characteristics. Characteristics shown in tables throughout this catalog were chosen as most significant. They are taken at normal room temperature and humidity. These characteristics may vary as temperature and humidity conditions differ. Sketches show how characteristics are measured for in-line plunger actuation.

Linear dimensions for in-line actuation are from top of plunger to a reference line, usually the center of the mounting holes.

Differential Travel (D.T.)—Plunger or actuator travel from point where contacts "snap-over" to point where they "snapback."

Free Position (F.P.)—Position of switch plunger or actuator when no external force is applied (other than gravity).

Full Overtravel Force—Force required to attain full overtravel of actuator.

Operating Position (O.P.)—Position of switch plunger or actuator at which point contacts snap from normal to operated position. Note that in the case of flexible or adjustable actuators, the operating position is measured from the end of the lever or its maximum length. Location of operating position measurement shown on mounting dimension drawings.

Operating Force (O.F.)—Amount of force applied to switch plunger or actuator to cause contact "snap-over." Note in the case of adjustable actuators, the force is measured from the maximum length position of the lever.

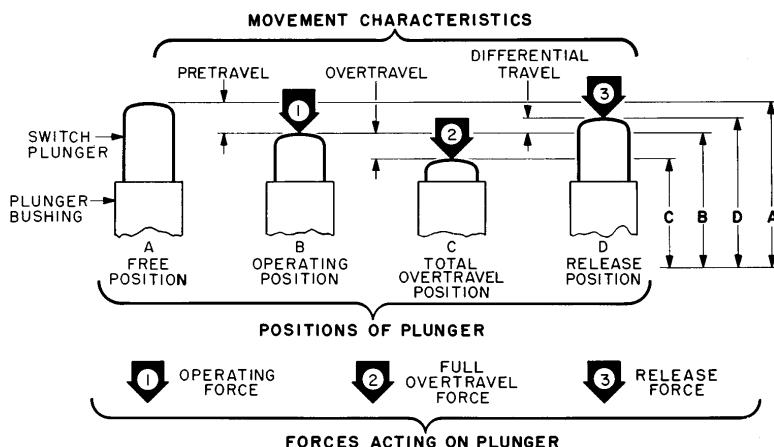

Overtravel (O.T.)—Plunger or actuator travel safely available beyond operating position.

Pretravel (P.T.)—Distance or angle traveled in moving plunger or actuator from free position to operating position.

Release Force (R.F.)—Amount of force still applied to switch plunger or actuator at moment contacts snap from operated position to unoperated position.

Total Travel (T.T.)—Distance from actuator free position to overtravel limit position.

In-line plunger actuation

Toggle switch locking configurations

Toggle switches are available with the following locking configurations -

A 	B 	D 	E 	F 	G 	H
Locked In Three Positions	Locked In Center and Extreme Position (Keyway Side)	Locked Out Of Center Position	Locked In Center Position	Locked In Extreme Position (Opposite Keyway)	Locked In Extreme Position (Keyway Side)	Locked Out Of Center And Extreme Position (Keyway Side)
J 	K 	L 	M 	N 	P 	Locked Out Of Center And Extreme Position (Opposite Keyway)

Military specifications procurement information

How to increase your effectiveness in using specification MIL-PRF-8805

The following information is intended to increase your effectiveness in using the Specification MIL-PRF-8805, minimize your costs and reduce delivery time for switches procured to the Specification.

Standard items

(shown on QPL 8805)

HONEYWELL suggests the following statement be used when ordering items appearing on QPL 8805:

"Honeywell" catalog listing No. listed on QPL 8805 as No. ."

Should additional requirements be needed for application of the switch in its end use, they should be specifically stated as part of the ordering information.

Non-standard items

(not shown on QPL 8805)

Honeywell suggests the following statement be used when ordering items which do not appear on QPL 8805:

"Switch drawing No. shall meet the following performance requirements of MIL-PRF-8805."

The above statement to be supplemented by the performance requirements which you consider applicable.

Why the suggested statements will minimize cost and delivery of non-standard items

Military Specification MIL-PRF-8805 requires a complete qualification test of non-standard items (**unless you specifically call out** the performance requirements which you consider applicable **to your switch application**). Complete qualification is costly and will delay shipment of switches. By specifying all those requirements which you consider applicable you can minimize both your cost and delivery flow time. General statements, such as "switch must meet requirements of MIL-PRF-8805", require complete MIL-PRF-8805 qualification tests.

Honeywell believes that you, the user, know best the specific requirements of your application. These requirements may be more or less severe than those reflected by the test parameters of MIL-PRF-8805. In the interest of supplying switches which will meet your requirements with a minimum of expense and delay, we suggest use of the applicable statement provided for Standard (QPL) items and Non-Standard items (not on QPL).

Honeywell solicits submittal of your proposal prints for review and comment. This review may result in savings of time and cost for you.

SE and XE Series Environmentally Sealed Basic Switches

SE and XE Series switches are the smallest, environment sealed switches offered by Honeywell. They enclose basic switches within a corrosion-resistant aluminum housing to seal precision switch contacts from contamination. SE switches include a SM basic switch; XE switches include the smaller SX basic switch.

Housing material:	Aluminium
Sealing:	Watertight seal per MIL-PRF-8805, symbol 3
Termination:	305,0 mm [1 ft] leadwire or Solder (turret)
Contacts:	Silver

Switching options:	SPDT	Single Pole, Double Throw
---------------------------	------	---------------------------

SPNC	Single Pole, Normally Closed
-------------	------------------------------

SPNO	Single Pole, Normally Open

HM Series

Miniature, Hermetically Sealed, Basic Switches

HM Series hermetically sealed basic switches contain contacts in a sealed chamber. A gas-tight seal is maintained while transmitting force and motion to the switch mechanism through a metal diaphragm.

This series is not generally recommended for 115 Vac, 60 Hz. If you have a 60 Hz application in the mA range, or applications that require the switch to function electrically during exposure to sub-freezing temperatures, contact Honeywell for special design variations that are available.

Package size:

18,29 mm H x 6,35 mm W x 22,35 L
(0.72 in H x 0.25 in W x 0.88 in L)

Housing material:

Hermetic MIL-PRF-8805, design symbol 5

Stainless Steel

Sealing:

Solder or leadwire

Termination:

MIL-PRF-8805, design symbol 5

Operating force max. (OF):

1,95 N [7.00 oz]

Pretravel max. (PT):

0,76 mm [0.03 in]

Overtravel min. (OT):

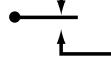

0,08 mm [0.003 in]

Differential travel max. (DT):

0,15 mm [0.006 in]

Switching options:

SPDT Single Pole, Double Throw

Electrical ratings:

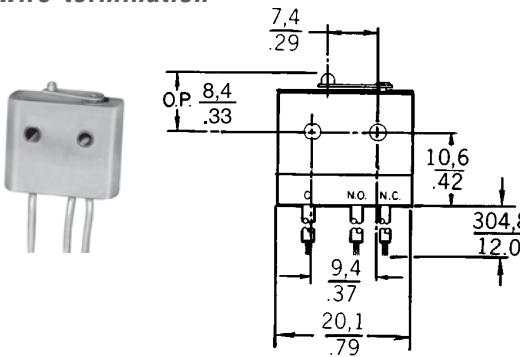

A	1 A res., 0.25 A ind., (sea level or 70000 ft), 28 Vdc
B	4 A res., 2 A ind., (sea level), 28 Vdc
C	0.5 A res., 0.25 A ind., (sea level or 70000 ft), 28 Vdc
D	3 A res., 1 A ind. (sea level or 70000 ft), 28 Vdc 1 A res., or ind. (sea level), 115 Vac, 400 Hz
E	0.1 A res., 0.1 A ind., 28 Vdc

Temperature range:

1	-65 °C to 121 °C [-85 °F to 257 °F]
2	-65 °C to 176 °C [-85 °F to 350 °F]
3	-65 °C to 260 °C [-85 °F to 500 °F]
4	-184 °C to 121°C [-300 °F to 250 °F]
5	-184 °C to 260 °C [-300 °F to 500 °F]

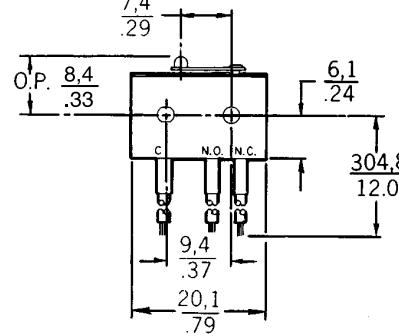

Application notes

- 1 Honeywell does not recommend the use of silver cadmium oxide switch contacts in non-arcng loads. Non-arcng loads are generally loads less than 12 V and/or 0.5 A. Catalog listings in the 5, 6, 15, and 16HM Series use silver cadmium oxide contacts. If you have specific questions, contact Honeywell.
- 2 For applications involving non-arcng loads, catalog listings in the 9, 10, 19 and 20HM Series are recommended.

EN Series

Environment Sealed

Limit Switches

The EN Series Environment-sealed Limit Switch has resilient sealing as defined in MIL-S-8805, Symbol 4. In addition to the standard versions, miniature housing constructions may be available with similar actuator styles. The miniature versions may meet the demand for smaller size and lighter weight without sacrificing performance or electrical capacity. The miniature version housing is 7.92 mm [0.312 in] smaller in diameter and weighs 14.2 g [0.5 oz] less than the standard version.

	125 Vac @ 400 Hz	24	4	5	5

Explanations of switches with special features**Low force operation (Low OF)**

Special spring construction within this switch reduces the normal 6 lb to 12 lb [26,7 N to 53,4 N] EN operating force to 3 lb to 6 lb[13,3 N to 26,7 N]. This switch is also dimensionally interchangeable with the standard size 1EN1-6. Low force 600 series ENs have 3 to 6 pounds [13,3 to 26,7 N] of operating force.

Increased overtravel (High OT)

A longer plunger and bushing on the switch extends the EN overtravel capabilities from the normal 0.25 in to 0.86 in [6,35 mm to 21,8 mm]. The longer bushing also permits additional adjustment of the plunger position.

High impact shock (High shock)

Catalog listing 1EN75-R3 (M8805/65-001) has been qualified to MIL-PRF-8805, including high impact shock class H. Other switches rated for high impact shock applications incorporate the same plunger mechanism and internal switch design as used in the 1EN75-R3 and are expected to conform to the same requirements.

Switch dimensions

Where there is no dimension drawing shown, combine housing height and diameter with actuator for overall measurement.

Miniature type EN switches may meet the demand for smaller size and lighter weight without sacrificing performance or electrical capacity. These types are of the same construction, seal, and materials as the standard size EN switches.

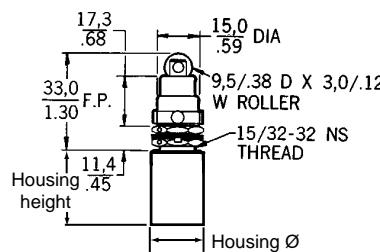

Type 400EN switches are directly interchangeable with their standard size EN counterpart, yet are smaller in diameter and lighter in weight. The miniature listing housing is 0.312 in [7.92 mm] smaller in diameter, and the switch weight 1.2 oz [14.2g] less.

Operating temperature:

-55 °C to 85 °C
[-67 °F to 185 °F]

HE Series

Hermetically Sealed, Limit Switches

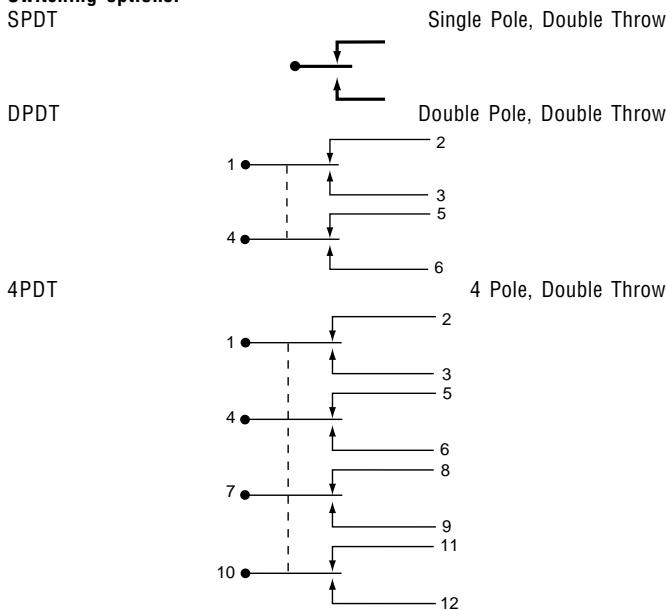

The HE Series Hermetically-sealed Limit Switch meets hermetic sealing as defined in MIL-S-8805, Symbol 5. The HE Series features true hermetic sealing (metal-to-metal, glass-to metal construction), aimed at providing maximum sealing effectiveness for exceptionally long periods of time regardless of constant changes in atmospheric pressures and temperatures.

Housing material:	Stainless Steel	
Sealing:	Hermetic	MIL-S-8805, design symbol 5
Operating temperature:		-55 °C to 125 °C [-67 °F to 257 °F]
Termination:		Leadwire (x 6)
Operating force max. (OF):		
1HE Series 26,69 N to 53,38 N [6 lb to 12 lb]

HR Series

Hermetically Sealed, High Temperature, Limit Switches

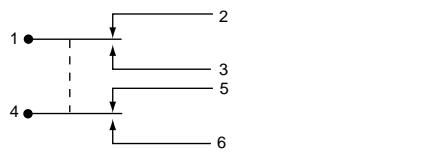

The HR Series high temperature, hermetically sealed switch is sealed as defined in MIL-S-8805, Symbol 5. The HR Series combines maximum sealing, high temperature (315°C [600°F]) capabilities and rugged, heavy duty, corrosion-resistant construction aimed at providing reliable switching in the most demanding applications.

Housing material:	Stainless Steel	
Sealing:	Hermetic MIL-S-8805, design symbol 5

TL Series

Environment Sealed

Toggle Switches

Standard lever - 1, 2 and 4 pole

Locking lever

IWTS type -
1 and 2 pole

The TL Series are military-grade design and environment-proof sealed toggle switches, qualified to MIL-S-3950. A large selection of circuitries, lever designs, and electrical terminations are available, with silver or gold plated contacts to meet a variety of electrical load requirements. They have high strength, temperature resistant, non-tracking case material.

For options other than those shown below, contact Honeywell for more information.

IWTS (Integrated Wire Termination System) option

IWTS provides you with a reliable, completely serviceable unit which meets MIL-S-3950 requirements. IWTS improves maintainability since wiring bundles need not be disturbed. Leads are quickly and easily assembled or removed with an insert-extract tool.

A unique three-rib (grommet style) elastomer seal protects the lead connections without potting. There are no exposed metal terminals.

Versions are available that will accept No.16 wire with M39029/1-102 contact pins or No. 20 wire with M39029/1-101 contact pins. Connections are resistant to shock, vibration, and high pulling force.

Approvals: UL, CSA, CE

MIL-S-3950

Sealing: -65 °C to 71 °C

[-85 °F to 160 °F]

Operating temperature: Bushing 15/32 in

Solder, Screw,

Mounting: IWTS (14-16 Gage and 16-20 Gage)

Termination: Silver cadmium oxide or gold (gold where indicated)

Electrical ratings (Resistive load):

Values below are based on previous Honeywell testing and opinion. See MIL-S-3950 for Military specified values.

A 0.5 A to 15 A at 0.5 Vac to 277 Vac | 0.75 A at 115 Vdc
0.5 A to 20 A at 0.5 Vdc to 28 Vdc | 0.5 A at 250 Vdc

B 0.5 A to 15 A at 0.5 Vdc to 28 Vdc | 0.75 A at 115 Vdc
0.5 A to 10 A at 0.5 Vac to 277 Vac | 0.5 A at 250 Vdc

C 0.75 A at 115 Vdc | 0.5 A to 20 A at 0.5 Vdc to 28 Vdc
0.5 A to 15 A at 0.5 Vac to 277 Vac | 0.5 A at 250 Vdc

D 0.5 A to 18 A at 0.5 Vdc to 28 Vdc | 0.5 A to 10 A at 0.5 Vac to 277 Vac
0.5 A at 250 Vdc | 0.75 A at 115 Vdc

E 0.5 A to 20 A at 0.5 Vdc to 28 Vdc | 0.5 A to 15 A at 0.5 Vac to 277 Vac
0.5 A at 250 Vdc | 0.75 A at 115 Vdc

F 0.75 A at 115 Vdc | 0.5 A at 250 Vdc | 0.5 A to 10 A at 0.5 Vac to 277 Vac
0.5 A to 18 A at 0.5 Vdc to 28 Vdc

UL/CSA Rating Code:

L191: 15 A-125, 250, 277 Vac; 1/2 Hp-125 Vac;
1 Hp-250, 277 Vac; 5 A-120 Vac "L"

L192: 10 A-125, 250, 277 Vac; 1/4 Hp-125 Vac;
1/2 Hp-250, 277 Vac; 3 A-125 Vac "L"

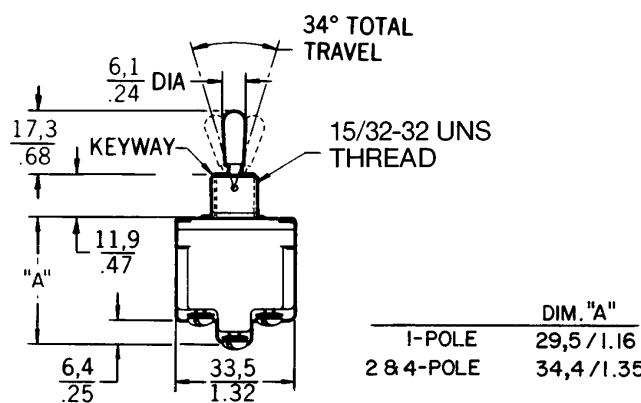

Application Note:

Honeywell does not recommend the use of silver cadmium oxide switch contacts in non-arcing loads. Non-arcing loads are generally loads less than 12 V and/or 0.5 A. TL switches use silver cadmium oxide contact.

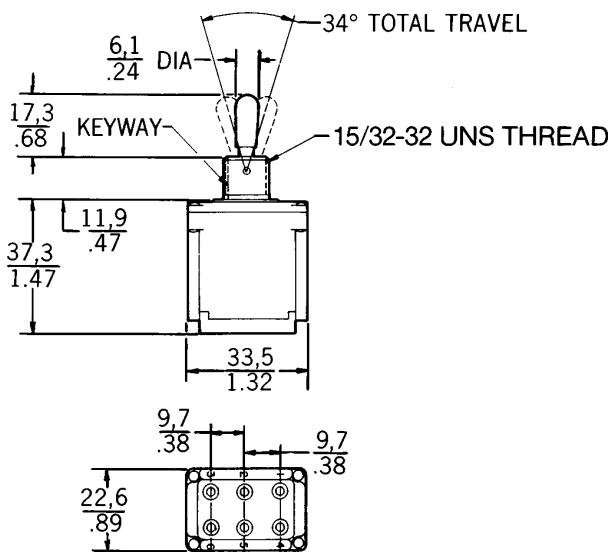

If you have specific questions, contact Honeywell.

AT Series

Toggle Switch Assemblies

Standard

Pull-to-unlock

The AT Series provides multi-pole (2, 4, 6, 8 & 10) toggle switches that contain precision basic switches which conserve space and weight. The AT Series offers a standard lever design along with lever-locking mechanisms that are sometimes required to prevent inadvertently actuating the toggle lever when it is not desired to do so. The lever-locking mechanisms require that the toggle lever must be pulled approximately 2,3 mm [0.09 inches] to change the position. Other variations include different toggle lever designs/styles, circuitry variation, toggle lever to bushing seals, etc. The 60AT Series offers qualified versions that meet MIL-S-8805/98 requirements. To find out more about the AT Series variations that are available, contact Honeywell or visit www.honeywell.com/sensing.

NT Series

Sealed Toggle Switches

Step base,
Panel stand-off

Step base,
no hardware

Flat base,
Panel stand-off

Note:

No hardware indicates no mounting nuts, keying washer, lockwasher or termination screws (if applicable).

NT Series toggle switches can meet the need for a rugged, cost-effective toggle switch. Quality construction features include a seal between the toggle lever and bushing, and between the cover and case. These switches can be used where panels are subject to splashes, hosedowns, or outdoor environments. The "Easy-Start" threaded bushing enables quick alignment of mounting nut to decrease the chance of cross threading. The panel stand-off with O-ring feature available on some listings, eliminates the need for behind-the-panel hardware, provides uniform panel height, and provides a panel to cover seal.

Locking toggle levers prevent accidental toggle movement. The knobbed, toggle lever must be pulled out to change position.

Approvals:

UL, CSA

Sealing:

IP 67/68, NEMA 3, 3R, 4, 13

Operating temperature:

-40 °C to 71 °C

[-40 °F to 160 °F]

Mounting:

Bushing 15/32 in

Termination:

Solder, Screw, Quick Connect

Contacts:

Silver cadmium oxide (Gold option available)

Electrical ratings (Resistive load):

1/2 Hp-250, 277 Vac; 3 A-125 Vac "L"

Application Note:

Honeywell does not recommend the use of silver cadmium oxide switch contacts in non-arc-ing loads. Non-arc-ing loads are generally loads less than 12 V and/or 0.5 A. TP switches use silver cadmium oxide contacts, but gold contact options are available.

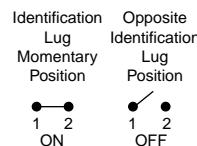

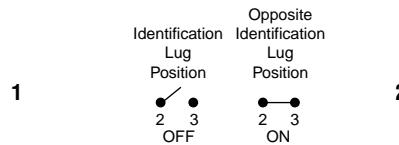

If you have specific questions, contact Honeywell.

Honeywell's 2 and 3 position, pushbutton action rocker switches are dust and splash-proof sealed. They can be provided with or without buttons. The switches are available as flush or panel mount, a large selection of rocker colors, circuitries and electrical terminations. Versions are available with silver or gold contacts to meet a variety of electrical load requirements. For options other than those shown below, contact Honeywell for more information.

Miniature Rocker Switches

These miniature rocker switches offer a variety of aesthetic and functional options ranging from circuit configurations to ac and dc ratings. They feature industry standard dimensions, an easy snap-in mounting method, and offer one-or-two pole switches in numerous single-throw and double-throw maintained and momentary circuits. The illuminated and non-illuminated miniature switches are intended to meet the needs of a wide variety of industries and potential applications. The silver-alloy contacts will handle a range of electrical loads. The illuminated products offer LED or neon-style lamps.

Miniature Rocker Switches

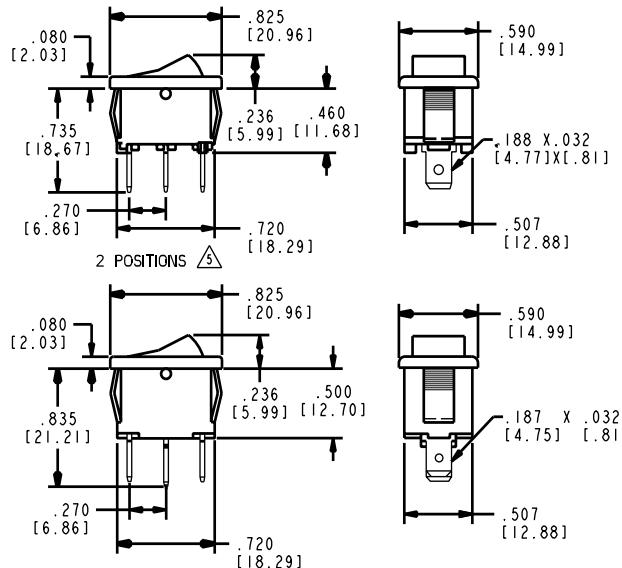

These subminiature rocker switches offer a variety of aesthetic and functional options ranging from circuit configurations to ac and dc ratings. They feature industry standard dimensions, an easy snap-in mounting method, and offer one-or-two pole switches in numerous single-throw and double-throw maintained and momentary circuits. These non-illuminated switches are often ideal for applications where there is restricted space behind the panel. It fits in a standard rectangular cutout and is designed to fit easily and securely. The snap-action contacts provide the user with a crisp, positive response. A variety of circuitry choices will appeal to many industry segments.

Manual Switches and Pushbuttons

Manual Switches. Designed by industrial designers to achieve balance between harmonious appearance and ergonomics, AML Advanced Manual Line has pushbuttons, paddles, and rockers; with LED, incandescent, and neon illumination. Plus, matching indicators and LED annunciators. A smaller cousin, MML Miniature Manual Line, offers many AML features in a space-saving size.

Pushbuttons. A wide array of different pushbutton families, many with lighted display and matching indicators. Includes Series 2, an easily assembled modular design with many color display/control options; and compact PB unlighted pushbuttons.

AML Series

Advanced Manual Line Switches

In Front of the Panel

Coordinated, attractive appearance. AML features innovations designed by industrial designers aimed at achieving the best balance of human factors and aesthetic appearance. Operator height, bezel size, and the compatibility of square and rectangular shapes blend with other components to harmonize your panel. There's no visual clutter to distract from man/machine communication.

This comprehensive line of lighted and unlighted manual controls features:

- Pushbuttons for high and intermediate frequency functions.
- Rocker and paddle switches, with two or three positions, for less frequent control functions.
- Plus lighted indicators and annunciations which complement AML's universal appeal.

Various controls can be matched with their functions to accommodate the most natural and efficient habit pattern reflex. Keylock-operated switches can be used to assure "authorized personnel only" access.

Display flexibility. AML offers a choice of five legend sizes, four button heights, full or split second display, and illumination by incandescent lamps, LEDs or neons. Colors are bright and uniform, providing a strong definition and good visibility. (Non-illuminated devices have the same attractive colors.)

Color display options include:

- Transmitted color – color can be distinguished whether the lamp is On or Off.
- Dead front – display appears black, until illumination causes legend and color to appear.
- Projected color – white display is diffused with color when illuminated.

Behind the Panel

AMLS simple, cost-effective design provides many behind-panel benefits for the designer and installer/user.

Simple to install. They snap in from the panel front individually or in vertical or horizontal strips; or in subpanel mounted strips and matrices that can be pre-assembled and pre-wired.

Electrical flexibility. Solid state switches with Hall-effect integrated circuits interface directly with microprocessors and other logic-level devices. These ICs were first applied in MICRO SWITCH solid state keyboards. Today, many MICRO SWITCH products incorporate the Hall-effect technology to meet a wide range of position sensing and manual control needs.

Electronic control switches with gold or silver contacts, and 1, 2, or 4 poles, will handle up to three amps. Including an encoded version which generates different binary coded outputs merely by changing cam-keyed buttons.

Power-duty switches meet line disconnect application needs with 10-amp pushbuttons and 15-amp paddle and rocker switches.

Easy to Wire. All AML devices present single-level termination. This means faster, easier, neater, and more economical wiring. And there is a choice of solder, quick-connect, push-on, and printed circuit termination.

Mating Terminals

The .110 x .020 quick-connect/solder terminals (types 2 and 8) are designed for use with receptacles that comply with the UL standard for insertion and withdrawal forces. Maximum insertion force is 12 lbs. max., withdrawal force is 14 lbs. These receptacles are supplied by AMP Inc., Berg, Augat, Hollingsworth, MALCO, Zierick, and others. Refer to Thomas Register or the Yellow Pages for the location of your supplier.

Features

- Complete selection of pushbutton, rocker, and paddle (toggle type) switches accommodates different functions and helps promote operator efficiency.
- Solid state, electronic, and power duty control.
- Full or split-screen incandescent display switches and indicators provide vivid transmitted color, projected color (for neutral display when unlit), and dead front (hidden color).
- Wide-angle visibility LED and line voltage neon display switches and indicators.
- Announciators back lighted by LEDs enable high density message display.
- Keylock switches available for controlled access applications.
- All AML terminations at the same shallow depth (43.1 mm [1.7 in]) for convenient wiring or PC board termination.
- Snap-in surface mount or sub-panel (hidden bezel) mount with mounting hardware.
- Pad-printed legends with a clear polyurethane overcoat available in a choice of five standard sizes.
- Metric design for worldwide acceptance.
- UL recognized, CSA certification.
- Selected listings are certified by VDE and CE. (For compliance status, contact the 800 number).

Honeywell's AML Advanced Manual Line combines functional flexibility with electrical versatility to provide a broad range of options to choose from.

Easy to Relamp. Relamping of T-1-3/4 incandescent AML91 lamps is accomplished from the front of the panel without tools. (AML92 T-1-3/4 LEDs can be added in the same manner).

Full Guard Bezel Option. As an alternative to standard height bezels (1.5 mm [0.6 in]), pushbutton switches can be furnished with full-guard bezels extending 5.0 mm [0.19 in] from the mounting surface. In the free position, standard buttons are flush with full-guard bezels.

The raised bezel guards against accidental operation by someone leaning against or dropping something on a control console.

High Intensity LEDs for Full-face AML Lighted Display

AML 92 Series

- Full-face illumination for high visibility lighted colors.
- Advanced illumination technology combines high-intensity LED in standard T-1-3/4 wedge base lamp package.
- Easy plug-in installation in AML lighted switches and indicators.
- Low operating temperature permits high density, continuous operation with minimal heat build up.

AML92 Series LEDs have a quad chip assembled in a T-1-3/4 wedge base lamp package. They provide full-face illumination when used with lighted pushbutton, rocker and paddle switches, or indicators equipped with incandescent lamp sockets.

MML Series

Miniature Manual Line

Switches

Features

- Breadth of line offers complete selection of pushbuttons, rockers, and indicators to accommodate different functions and promote operator efficiency.
- Printed wiring board (PWB) or panel-mounted switches, plus multi-unit strip mounting, and single-level termination for cost-effective installation.
- Tactile feedback imparts a definite feel of switching action.
- Coordinated appearance enhances panel harmony.
- Illumination by long-life LEDs and incandescent lamps – for lighted display versatility.
- Solid state, electronic control and power-duty switching – for electrical versatility.
- Temperature range 18 °C to 65 °C [0 °F to 149 °F].

Design Freedom

Rocker switches are available in the MML Miniature Manual Line. They complement AML pushbuttons and indicators, providing you flexibility and design freedom to meet all your miniature manual control requirements. You can choose the actuator option that matches the switch function and natural-habit pattern reflex of the operator. You no longer need to compromise quality, appearance, or human factors considerations because of size constraints.

The MML pushbutton and indicator offering has been expanded to include new square forms which are small enough to fit in the tightest places.

Mounting Flexibility

Printed wiring board (PWB) mounted switches can be arranged in individual panel openings or multi-unit strips, in a common panel cutout. Optional support brackets provide added rigidity for stand-alone PWB-mounted devices. Units with bezels and mounting clips can be snap-in mounted from the front panel.

Single-level PWB or solder/quick-connect termination throughout makes wiring faster, easier, and more economical. Housings are designed to accommodate washing, before and after wave soldering, to help prevent contamination during printed wiring board installation.

Lighted Display Options

Pushbuttons and indicators can be full-face illuminated by LEDs or incandescent lamps for high visibility of colors and legends. Inherently rugged, long-life LEDs can help reduce service and maintenance costs. Also, their low drive and in-rush current (30 mA or less) reduces costs of drive circuitry.

Rockers can be furnished with colored lenses for illumination by LEDs or incandescent lamps.

Control Versatility

Solid state pushbutton switches with Hall-effect integrated circuits interface directly with microprocessors and other logic-level devices. Time-proven for billions of cycles, Hall-effect ICs provide the ultimate in reliability.

Electronic control push button or rocker switches, with gold or silver contacts, handle up to 1 A; power-duty switches, up to 6 A.

MML Enhances Panel Harmony

The attractive, clean line design of the total MML offering is coordinated to work in harmony and enhance the visual qualities of your product. MML will help make a good first impression with your customers by blending with other panel components, and also works hard over the long run to maintain operator satisfaction.

How to Order

To specify MML catalog listings, refer to the order guides. They are based on a modular cataloging system which gives you the flexibility to choose the combination of feature options that best answers the requirements of your application.

Custom Switches and Assemblies

Honeywell Sensing and Control's broad product and technology portfolio combined with our industry experience and know-how offers customers a wealth of choice:

- Custom engineered solutions for customer-specific designs and product packaging
- Technology selection
- Integration and component miniaturisation

For more information contact your local Honeywell sales representative.

Shown here are some examples of what we can do.

Harness assemblies

- Cable harness assemblies can be added to many of our products, designed to specific customer requirements.
- These may incorporate latest specification leadwire systems, screens, connectors and backshells and aimed at providing customers with a fully integrated solutions.

Switch assemblies

- Honeywell has many years of experience designing custom solutions for customers.
- Our environment and hermetically sealed products may, for instance, be incorporated into housings that provide minimum space envelope or specific mounting arrangement.
- They may incorporate precision actuating mechanisms and electronic circuitry to interface with customer systems.

Rotary switches

- Based on Honeywell basic or miniature hermetic switches, rotary switches can be designed to incorporate multiple poles, specific switch on/off sequences and high or low energy switching.
- Potential applications include weapons selectors, Re-fuelling probe indicators and flap position indicators.
- Customer-specific space envelope and mounting arrangements can be accommodated.

Operator interface products

- Honeywell has many examples of custom designed operator interfaced products for both hand and foot operation.
- These products may incorporate pushbuttons, indicators and electronic interfacing circuitry.
- All products are capable of operating in these most severe environments.

Honeywell

www.honeywell.com/sensing

Gear selectors

- Based on rotary switches, this family of rugged and reliable gear selectors is used in armoured vehicle applications.
- These products can be modified to meet new potential applications such as illuminated or fluorescent gear position indications, number of gear positions, interlocking, high or low energy switching and mounting arrangements.

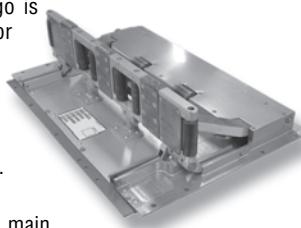

Flap selectors

- A range of commercial aircraft flap selectors based on RVDT (Rotary Variable Differential Transducers) or Honeywell basic switches.
- These products can be modified to meet new potential application requirements such as flap positions, mounting arrangements, connectors or electrical harnesses.
- The example illustrated incorporates four-position flap selection, environmentally sealed fluorescent flap decal and illuminated position indicators and is based on RVDTs.

Cargo loading systems

- The **door sill roller** is part of the cargo loading system that serves as a guiding and protecting element during load and unload operations. Incoming cargo is guided into the cargo loading bay to protect the cargo door sill.
- The **Y-guide** is part of the cargo loading system that controls the lateral guidance of cargo during load and unload operations at the cargo entrance area. The unit is designed as a powered, retractable and overrideable guide.
- The **angle measurement device** is part of door actuator symmetry monitoring. This device prevents damage to the main cargo door and the structure of the aircraft by monitoring the asymmetric movement of the two main cargo door actuators.
- The example shown is a Y-guide cargo loading system incorporating robust mechanical components and environmentally sealed position sensors. It is used in commercial aircraft applications.

Custom Controls

Competition between off-road equipment manufacturers can be fierce. Honeywell can help you distinguish yourself from the competition by working with you in developing your custom controls and switches. We have innovative and flexible design capabilities coupled with cost-effective prices. Quick response including design, and "fit-up" prototypes in weeks versus months from your initial request provides the edge you need to shine over your competition. Control interfaces that are functional, rugged and aesthetically pleasing are an important part of the design process. The ability to ergonomically design numerous functions into one product is our strength.

Technological and process capabilities

- Pro/Engineer software
- Programmable controllers
- Mold flow analysis

Control and switch capability

- Sliding, toggle and button engagement
- Environmentally protected
- Night visibility/lighted components
- Directional
- Speed control
- Molded terminal arrays
- Ergonomically sensitive
- Indicator light panels

Potential Applications

- All terrain vehicles (ATVs)
- Forestry
- Agriculture
- Lawn and garden
- Snowmobiles
- Motorcycles
- Construction
- Material handling

Multi-function controls

Throttle controls

Electronic shifters

Key switches

Indicator light strips

Push/Pull switches

Proportional retarders

Hour meters

Honeywell has a wide range of hour meters that are used for recording and tracking the total elapsed time that equipment is in use.

Long recognised as the industry leader, the Hobbs brand hour meters are designed for use in a wide variety of potential applications and environments. In order to protect investment in expensive equipment, our customers demand a meter that is accurate and dependable. Down time is not an option - customers need to know when it is time to service their equipment.

No matter whether the equipment is for production or recreation, manufacturers, operators and service professionals rely on Honeywell for their hour meters needs.

98000 Series LCD hour meters

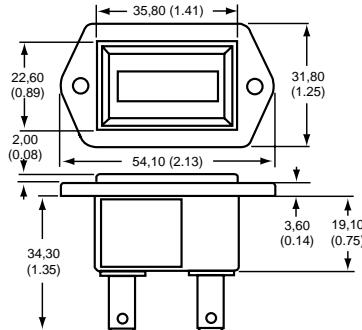

The 98000 Series LCD hour meter combines reliability with a solid state package, built for rugged, heavy-duty applications. The meter utilizes a large LCD display with 6 mm [0.24 in] high digits.

Other benefits include shorter overall meter depth, totally silent operation, non-volatile memory and solid-state circuitry. A wide variety of mounting styles are offered that are direct replacements for most traditional hour meters. Optional offerings include, reset capability, customised logos, 4.5 Vdc to 16 Vdc, and pulse counters. The series is UL recognised and comes in a variety of mounting and case options.

Termination:	6,35 mm [1/4 in] blade

CAUTION

All meter modules have crucial components exposed. The module must be sufficiently protected if used in an environment other than specified. Contact Honeywell when suitability of application is questioned.

98000 Series LCD volt/hour meters

Honeywell Sensing and Control has introduced the LCD volt/hour meter that combines two important instruments in one rugged, sealed package. Honeywell volt hour meters monitor the condition of battery electrical systems and simultaneously measure the total elapsed run time of equipment in which they are installed. During operation, the micro-controller based movement will cycle the LCD display between voltage and hours indication at a rate of fifteen seconds on for voltage and one second on for total hours. The high-impact polycarbonate case is sealed against dust and moisture. Available in various bezel and mounting configurations, Honeywell's volt/hour meters are the perfect choice for a variety of applications.

Key Switches

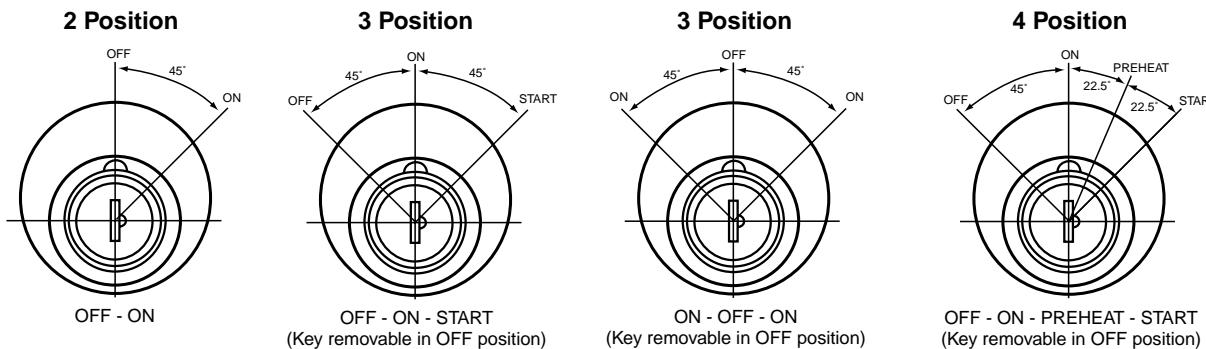

Honeywell Key switches are custom engineered, environmentally sealed, sliding contact switches. They can be designed to match existing keys or to use a six tumbler mechanism with up to 300 unique key combinations. The stainless steel keyhole shroud and keyhole dust shutter contribute to the durability of the assembly while O-rings protect the contact and rotor assembly from moisture and contamination.

Key switches can be used in off-highway, material handling or other potential applications where environmental specifications must be met. They have been tested for temperature, vibration, dust, cycling, humidity, pressure wash and salt fog and mount into a 22,10 mm [0.87 in] hole in panels 3,81 mm to 6,35 mm [0.15 in to 0.25 in] thick.

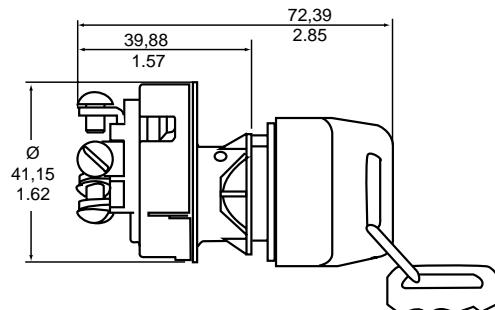

Standard configurations are shown below, others are available. Contact your Honeywell sales representative for more information.

Mechanical life:	25000 cycles
Operating temperature:	-40 °C to 85 °C [-40 °F to 185 °F]

Push/Pull Switches

Honeywell's Push/Pull switches are robust, environmentally sealed, positive action, sliding contact switches incorporating two circuits with multiple combinations. The switch can be designed with a single contact closure in either the push or pull position, two contact closures in either the push or pull positions or a single contact closure in both the push and pull position. For more details on these options, contact a Honeywell sales office. The dual O-ring design protects the contact chamber by isolating it from moisture or any other contaminant.

These switches may be suitable for the demands of harsh environments found in off-highway, material handling or other applications where rapid, positive action is required.

Proportional Retarders

Honeywell's Proportional Retarder is a shift-lever handle that attaches to the steering column of a vehicle and gives an electronic pulse-width-modulated output signal that is proportional to the position of the lever.

In standard mounting position, output signal has 10 % duty cycle when lever is pulled towards operator to maximum extent. When moved away from operator to its maximum travel, the lever snaps into a detent indicating the output signal now has 90 % duty cycle. The duty cycle between these two positions is a continuously variable function of position.

Housed in a sealed unit with a rugged, positive locking connector, the proportional retarder has reverse voltage, short circuit and over voltage protection.

Travel:	25° maximum angle travel
Supply Voltage:	9 Vdc to 32 Vdc (12 Vdc to 24 Vdc operating system)
Base Frequency:	500 Hz, ± 10 % over temperature and input voltage
Duty Cycle:	10 % to 90 %, ± 5 % at limits of travel
Output Voltage:	Pulse-width-modulated, 0 V to 7 V amplitude
Wiring and Connection:	Receptacle compatible with positive-locking Deutsch DT06-6S connector with 18 AWG (minimum wiring to conform to 1E815)

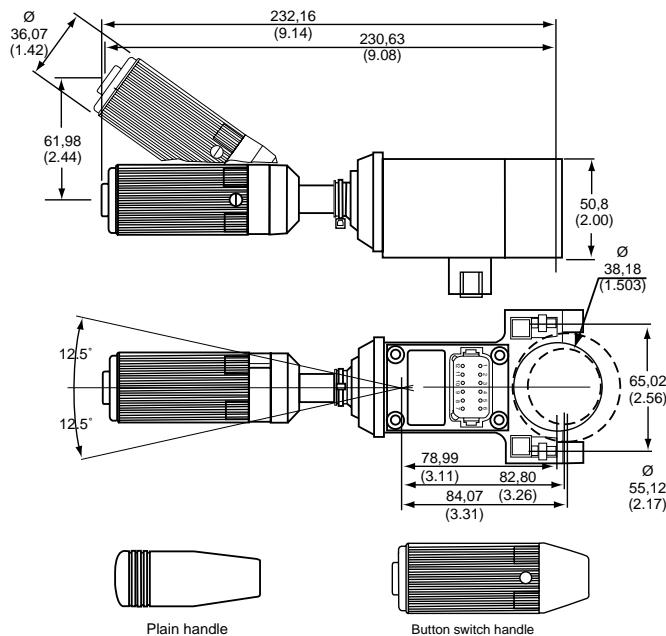

Turn Signals

Honeywell Turn signal switches are built to complement the Honeywell shifters or can be mounted independently. A variety of potential operations are available such as wiper speeds, head lamp control, button and auto cancel options.

These switches can be tailored to meet your design requirements; contact Honeywell for more information.

Mechanical life:	Turn signal Wiper Washer Head lamp dimmer	50,000 cycles (8 A, 12 V load) 50,000 cycles (2 A, 12 V load) 20,000 cycles (2 A, 12 V load) 20,000 cycles (15 A, 12 V load)

Lighting products

Honeywell continues the Hobbs tradition of rugged, off-highway work lamps. More than 20 million incandescent and halogen work lamps have been put to use in some of the most rugged working environments imaginable. Because they are designed for potential use in heavy construction and farming equipment, they are also designed to take shock, vibration and other extreme service conditions in their stride.

Halogen Swivel Mount Lamps

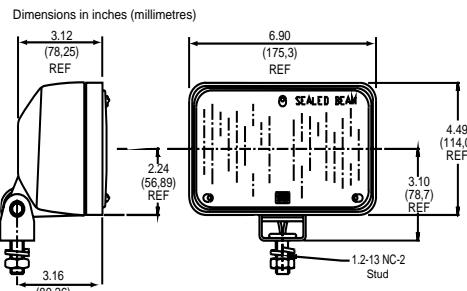

Honeywell offers a full line of heavy-duty, halogen, off highway, vehicle lamps to keep equipment moving long after the sun has set. Our halogen lamp housings are constructed of durable, vibration resistant materials. The securing hardware is zinc plated steel with a black dichromate coating. Reflectors are vacuum metallised. The borosilicate glass lenses are highly resistant to cracking, especially when subjected to extreme temperature changes.

HID Xenon High Intensity Discharge Lamps

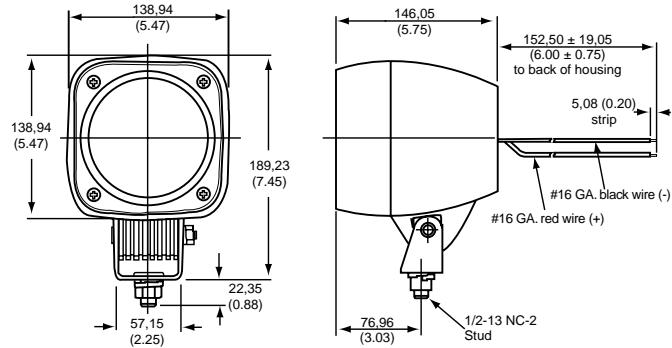

Honeywell Xenon high intensity discharge lamps are designed to hold up to the extreme demands of the off-highway construction and agricultural markets. HID technology is significantly more efficient than halogen and produces more light with less amperage draw.

HID lamps can provide up to three times the light output compared to the average halogen lamp. The technology allows equipment to operate more safely with less load on the electrical system resulting in optimum alternator and battery life.

Honeywell's HID features an electronic bulb/igniter/ballast system for enhanced performance throughout a broad temperature and vibration range. This reduces normal failure modes including filament breakage producing a life expectancy up to six times greater than a typical halogen lamp.

Honeywell's marine lamps are completely weatherproof. They are totally sealed against moisture ingress, and the mounting hardware is stainless steel to prevent rust and corrosion. The housing is shock resistant and can withstand up to 6 G vibration. The flood pattern illuminates an area 80° wide by 30° long.

Suitable applications for Honeywell marine lamps include:

- Engine compartment lighting
- Deck lighting
- Emergency lighting
- Launching and docking
- Spreader lights
- Shrimp and fishing boats
- Off-shore oil rigs
- Ocean vessels
- Barges
- Dry dock lighting
- Freighters, tankers, etc.
- Pleasure craft
- Anywhere a corrosion resistant lamp is needed

Custom Vehicle Lighting

Lighting products designed to the form, fit and functional requirements of OEM vehicles is the fastest growing segment in lighting. Continual investment in the latest equipment and software allows optical designs to be created in unique shapes and sizes to meet this need.

Honeywell Product Management and Engineering personnel can offer a complete custom design based upon the goals provided. Our manufacturing facilities are equipped to produce such lights in a matter of weeks. This quick turn around for prototype and production components is aimed at meeting even the most aggressive project timetables.

Other Vehicle Controls

Honeywell Sensing and Control's broad product and technology portfolio combined with industry experience and application know-how offers customers a wealth of choice:

- Custom engineered solutions for application-specific designs and product packaging
- Proven technology
- Low cost
- Automotive grade
- Extensive portfolio of designs
- Extensive high-volume experience

Pressure switches

- Extensive portfolio of existing designs
- Designed for transportation-related applications (12 Vdc)
- Custom designs possible
- Potential applications include engine oil pressure, compressor air pressure, heavy truck air brake pressure, transmission fluid pressure
- Modular designs

Circuit breakers

- Extensive portfolio of existing designs
- Designed for 12 Vdc applications
- Type 1 automatic reset
- Type 2 remote reset
- Type 3 manual reset
- Multiple designs, terminal styles, and mounting brackets
- 5 A to 50 A

Mechanical switches

- Extensive portfolio of existing designs
- Designed for 12 Vdc applications
- Multiple designs and terminal styles
- Potential applications include neutral start, reverse lamp, and 4WD transfer case mode indication

Precision Aerospace

If you have ever traveled by air, chances are you've flown with equipment by Honeywell Sensing and Control. We have been meeting demanding aerospace applications since 1952 under these brand names:

- Courier
- Bendix
- Eclipse-Pioneer
- Sperry
- MICRO SWITCH
- Valetin

Flight control actuation

- Linear and rotary flight control actuators with integral position feedback, clutches, brakes, dual motors and other options.
- These linear actuators are typically used for helicopter blade control. Many small aircraft use our rotary actuators in their autopilot systems.

Flight control position sensing

- Our linear and rotary position transmitters solve challenging measurement problems in harsh environments.
- Added value through features such as integral gear-train and discreet switches, non-linear response, viewing window, auto-rig-lock feature.

Cockpit controls

- Force and torque sensors integrated into flight control linkage measure pilot input forces.
- Speedbrake, flap selector, and other pilot input devices incorporating built-in detents, servo backdrive, and up to quad-channel redundant output.

Cockpit indicators

- Analog cockpit indicators serve potential applications such as angle of attack, fuel quantity, fuel flow.
- Dial, pointer and range markings can be designed to meet almost any customer requirement.
- Instruments can be either wedge lighted, backlit, unlighted, or night vision compliant.

Pressure switches and transmitters

- Pressure switches for a variety of potential applications including engine, hydraulics, and bleed-air. Available in a wide operating range with preset dead-band.
- Our extremely rugged electromechanical pressure transmitters operate at 250 °C [482 °F] and pressures as high as 11,000 psi and feature ac output.

HONEYWELL SENSING AND CONTROL PRODUCTS

Selecting the right sensor or switch for your application has never been easier. Honeywell Sensing and Control has one of the broadest product ranges of any supplier in the world, and the depth of our technology and product lines ensure you are able to find the right product for most applications.

We also have the outstanding technical support staff and responsive service to back this up, so you can always find what you need, when you need it. We aim to supply on time, every time, anywhere in the world.

Honeywell - Taking the risk and high costs out of system critical sensing and control.

You can find out more about Honeywell's extensive product range by visiting our website at

www.honeywell.com/sensing

There you can browse our interactive catalogue and discover our full range of products for use in Industrial, Automotive, Aviation, Transportation, Motion Control, Medical applications and more. Some of our more popular product families include:

Accelerometers

Utilizing Quartz Flexure and Resonating Beam technologies for inertial, control, and industrial applications.

Automotive Sensors

Speed and position sensors for engine management, wheel speed sensors, and position sensors for comfort, convenience, and motor control applications.

Basic Switches

Standard size, miniature, subminiature, hermetically sealed, and high temperature snap-action switches for applications requiring compactness, light weight, accurate repeatability and long life.

Current Sensors

Adjustable linear, null balance, digital, and linear output current sensors for monitoring ac or dc current.

Electronic and Electromechanical Safety products for Machine Safeguarding

Safety light curtains, laser scanners, mats, door interrupt devices and single and multi-beam optoelectronic devices for industrial machine safety. Safety interlock switches, limit switches and cable-pull limit switches for industrial machine safety. Safety control modules for industrial machine safety.

Environment Sealed Switches and Sensors

Designed for use in the harsh environments encountered in aerospace, transportation, ordnance and marine applications.

Fibre Optic Sensors

Active optoelectronic components and sub-assemblies (LEDs/transmitters, fiber-DIPs, receivers and modules) for the datacom market.

Force Sensors

Enhanced reliability and performance in compact commercial grade packaging.

Hour Meters

Honeywell's Hobbs brand products are designed for elapsed time measurement for testing, leasing, maintenance and warranty programs.

The meter family includes LCD, Counter, Battery Controller, AC Electro-Mechanical and DC Electro-Mechanical.

Humidity Sensors

Relative humidity/temperature and relative humidity sensors in chemically resistant packages to accommodate harsh environments.

Infrared Sensors

Optoelectronic standard infrared emitting diodes (IREDs), sensors and assemblies for object presence, limit, and motion sensing, position encoding, and movement counting.

Limit and Enclosed Switches

Heavy duty limit switches, enclosed switches (precision snap-acting switches sealed in rugged metal housing) and sealed and explosion-proof switches.

Liquid Level Sensors

Basic and industrial (designed for harsh industrial environments) liquid level sensors used to indicate the presence or absence of liquid.

Mass Airflow Sensors

Amplified and unamplified microbridge mass airflow sensors provide a sensitive and fast response to the flow of air or other gas over the chip.

Off-Highway Vehicular Lighting

Honeywell's Hobbs brand halogen sealed beams, composites, custom designer lights, specialty lighting and indicator modules for vehicular and non-vehicular applications.

Position Sensors

Hall-effect, magnetoresistive, and potentiometric devices for detecting the presence of a magnetic field or linear and rotary position.

Pressure Sensors

A wide offering of media-isolated pressure sensors with multiple pressure ports and electrical signals for a variety of potential applications including the monitoring and control of corrosive media in aggressive environments.

Proximity Sensors

Severe environment proximity sensors designed for use in applications with particularly demanding requirements on temperature, vibration, shock, and EMI/lightning resistance.

Pushbuttons, Keyswitches and Indicators

MICRO SWITCH brand pushbuttons, keyswitches, and indicators for use anywhere manual operation is desired.

Railway Sensors and Control Systems

Railwheel proximity sensors, interface modules, train departure control systems, solid state sensors, pressure sensors and electromechanical switches for potential on-board and off-board rail industry applications.

Relays

General-purpose power relays and relay sockets designed for a wide range of applications that require stability and reliability.

Resolvers

Absolute position sensors which provides high angular accuracy, high resolution and repeatability under severe environmental conditions.

Temperature Sensors

Platinum- and silicon-based thin film resistance temperature devices (RTDs) for applications that require small package size, accuracy, and linear outputs.

Thermal Products

Bimetal thermostats, Discrete and Packaged Thermistors, Precision Hi-Rel Negative Temperature Coefficient (NTC) Thermistors, Thermal cut offs and Flexible Heaters

Thermocouples, Non-contact probes and RTDs

Megapak thermocouples, thermocouples with protecting tubes, RADIAMATIC/RAYOTUBE Sensors, and the platinum RTD 100 Ohm.

Toggle and Rocker Switches

MICRO SWITCH brand toggles, rockers and paddle switches for use anywhere manual operation is desired. Military grade and environment sealed options are available.

Turbidity Sensors

Wash process turbidity sensors to improve product quality, minimize ingredient consumption, and reduce wastewater discharge in commercial and industrial bath applications.

Ultrasonic Sensors

Ultrasonic position sensors for presence/absence sensing, precision distance sensing or tracking for areas where other sensing technologies have difficulty, such as clear or shiny objects, foggy or particle laden air, or splashing liquids.

VRS Speed and Timing Sensors

Completely self-powered, VRS (magnetic) sensors are simple, rugged devices that do not require an external voltage source for operation. They are generally used to provide speed, timing or synchronization data to a display (or control circuitry) in the form of a pulse train.

This list of our products is not exhaustive, so check out our full range at www.honeywell.com/sensing

New Technologies and Emerging Capabilities

Honeywell Sensing and Control is constantly developing new technologies to keep customers competitive and at the forefront of their businesses. We excel at delivering innovative sensing and switching solutions with best use of technology. We are able to combine our different sensing technologies to offer differentiating solutions with enhanced precision and accuracy for the increasingly complex needs of our customers. Our range of technologies, combined with our application expertise and our customization capability, is what makes our sensors and switches leaders in their fields.

Wireless Pressure and Torque Sensors

New sensing capabilities using Surface Acoustic Wave (SAW) technology

Potential Applications

- *Electronic power steering*
- *Electro-hydraulic power steering*
- *Active suspension control*
- *Limited slip drive train controls*
- *Transmissions*

Emissions sensors

New sensing technologies to measure Exhaust gas recirculation (EGR) mass flow, In- cylinder pressure, oxygen, particulate matter, ammonia, nitrogen oxide.

Warranty/Remedy

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell's standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective. **The foregoing is buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.**

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.
