1 PRODUCT DESCRIPTION

1.1 Functional Description: NO Switch

The piezo switch is based on the functional principle of the piezoelectric crystal. The action of force on the piezo disk causes a voltage to be induced due to a charge transfer. The voltage generated is converted by the electronic connection into a polarity-neutral, electronic switch contact.

During the voltage drop, the electronic switch contact is closed for the specified pulse duration. After this, the electronic switch contact opens again, even if the force is still present. The period that the electronic switch contact remains closed depends on the actuating speed and force as well as on the duration of actuation.

Diagram of an NO switch:

The piezo disk is connected to the terminals 1 and 2. The electric circuit to be switched is connected at the terminals 3 and 4. This can be either direct voltage (DC) or alternating voltage (AC). If a pulse is applied to the piezo disk, terminal 1 becomes positive in relation to terminal 2 due to the voltage generated. The integrated switching element controls the electric circuit to be switched.

In the neutral position of the piezo switching element, the terminals 3 and 4 are non-conductive, and initial contact resistance is greater than 10 MOhm. When the piezo disk is actuated, the initial contact resistance is reduced to less than 20 Ohm.

When actuating the piezo disk, the resistance between terminals 3 and 4 is therefore changed from high resistance → low resistance → high resistance.

This corresponds in principle to the function of a conventional **NO pushbutton switch**.

Changes that contribute to technical improvement are subject to alternations.

1.2 Functional Description: Illumination

Ring Illumination

Single or bi-colored ring illumination is possible for the PSE switches.

When equipped with two colors, it is possible to either switch between the colors or to achieve a combination color, depending on the type of activation.

For example: Diodes of group 1 = red and diodes of group 2 = green

Only group 1 is activated	→	Ring has red illumination
Only group 2 is activated	→	Ring has green illumination
Both groups are activated at the same time	→	Ring has orange illumination

Red cable	=	Supply voltage: red LEDs
Green cable	=	Supply voltage: green LEDs
Black cable	=	Minus for all LEDs
White cable	=	Switch contact

[Terminal layout](#) see page 14 section 2.4 Switching Symbols Illumination

Special type 5V upon request

Point Illumination

When illuminating the PSE switch, either a single-color LED (2 pins) is used or a bi-colored LED (3 pins). If a single-color LED is used, cable No. 2 is not needed (see section 2.4 Switching Symbols: Illumination – Point Illumination).

Switching between colors can be achieved by appropriate activation.

2 TECHNICAL DATA AND DIMENSIONAL DRAWINGS

2.1 Technical Data

<u>Electrical Data</u>		
Switching Voltage max.	(VAC/DC)	42/60
Switching Current max.	(mA)	100
Rated Breaking Capacity	(W)	1
Lifetime (at Rated Breaking Capacity)	(million)	20
Insulation Resistance (OFF=not actuated)	(kΩ)	>10
Initial Contact Resistance (ON=actuated)	(mΩ)	<20
Capacity	(pF)	30
NO Pulse Time (depending on the actuating force, time and speed)	(ms)	20-1000
Contact Configuration		polarity-free
Switch Function		NO switch

<u>Mechanical Data</u>		
Actuating Force (at ambient temperature)	(N)	1-3 ¹⁾
Actuating Travel	(mm)	0.002
Torque	(Nm)	2.5
IK Protection Class	(IK)	02

<u>Climatic Data</u>		
Operating Temperature	(°C)	-40 to +85
Storage Temperature	(°C)	-40 to +85
IP Degree of Protection Front Side submerged	(IP)	67
IP Degree of Protection Front Side hose water		69K

1) At temperatures lower than -10°C, the actuating force increases 2- to 4-fold.

Point Illumination	
Stockable types are designed for a supply voltage of 24 V. Other possible supply voltages are 5 V and 12 V.	

Ring Illumination	
Stockable types are designed for a supply voltage of 24 V. Other possible supply voltages are 5 V and 12 V.	

Material	
Individual Part	Material
Housing (depending on type)	Stainless Steel 1)
	Anodized aluminum
	Polyamide
Actuating Area / Insert (with ring illumination)	Stainless steel 1)
	Anodized aluminum
Illuminated Ring (with ring illumination)	Polyamide

- 1) When using the switch in a saline or chloric environment, special materials must be used.
Items available upon request.

2.2 Component dimensions

2.2.1 M16 Series with Finger Guidance

with Pins

with Quick Connect Terminal

with AMP ¹⁾

Legend:

- A = Illumination Area
- B = Actuating Area
- C = Width Across Flats
- I = Crimp Terminal male 6.3x0.8

Lettering:

- either with/without lettering
- position of the connections with respect to the position of the lettering is not defined

¹⁾ Version available on request

Font Size

PSE M16 / M19 / M24 / M30

Individual characters:	Height: 5 mm; font: Helvetica normal DIN1451-1E
Lettering, max. 3 characters:	Height: 3 mm; font: Helvetica normal DIN1451-1E
Symbols (Indices 037-052):	Height of capital letters: 5 mm; font: True Type, Symbol

PSE M22

Individual characters:	Height: 5 mm; font: Helvetica normal DIN1451-1E
Lettering, max. 3 characters:	Height: 5 mm; font: Helvetica normal DIN1451-1E
Symbols (Indices 037-052):	Height of capital letters: 5 mm; font: True Type, Symbol

Standard Colors for Lettering

Stainless Steel:	Black	Filled letters	
Aluminum natural:	Gray	Filled letters	(only after customer approval)
Anodized Aluminum:	White	Filled letters	

4 PACKAGING

PSE Switches

M16		10 pieces per carton with inlay
M19		10 pieces per carton with inlay
M22		10 pieces per carton with inlay
M24 / M27 / M30 with Ring Illumination	Air-cushion bag 1 piece	10 pieces per carton

Nuts with sealing rings are packaged separately and are enclosed in the carton.

5 QUALIFICATION TESTS

5.1 IP Protection Class

IP Protection Class IEC/DIN/EN/ 60529	Front Side	IP 67
IP Protection Class DIN 40050-9:1993 (High-pressure steam-cleaning test)	Front Side	IP 69K

5.2 IK Protection Class

Tested centrally

IK Protection Class DIN EN 50102	IK 02
----------------------------------	-------

5.3 Salt-Spray Test

Salt-spray test according to DIN 50021- SS
24h, 48h and 96h test duration

After 8h, the start of corrosion may be discerned; after 96h, this corrosion has spread across large areas of the switch.

This surface corrosion may be removed under running water.

6 APPROVALS
