Notes:

1. Computed continuous current assumes the condition of T_{J_Max} while the actual continuous current depends on the thermal & electro-mechanical application board design.
2. Continuous current rating is limited by the package used.
3. This single-pulse measurement was taken under $T_{J_Max} = 175^\circ\text{C}$.
4. This single-pulse measurement was taken under the following condition [$L = 1mH, V_{GS} = 10V, V_{DS} = 50V$] while its value is limited by $T_{J_Max} = 175^\circ\text{C}$.
5. The power dissipation PD is based on $T_{J_Max} = 175^\circ\text{C}$.
6. This value is guaranteed by design hence it is not included in the production test.
