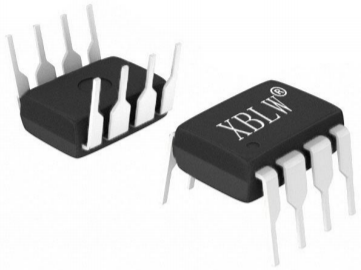
XBLW LM393

Dual Comparators

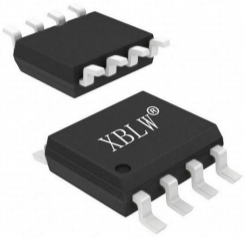
WEB | www.xinboleic.com

Descriptions

The LM393 series consists of two independent precision voltage comparators with an offset voltage specification as low as 2.0 mV max for two comparators which were designed specifically to operate from a single power supply over a wide range of voltages.Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage.These comparators also have a unique characteristic in that the input common-mode voltage range includes ground,even though operated from a single power supply voltage.It is mainly used in consumer and industrial electronic products.It is available in DIP-8 or SOP-8 package form.



DIP-8



SOP-8

Feature

- Wide Supply Voltage Range
  Single Supplies: 2.0V to 36V
  Dual Supplies: ±1.0V to ±18V
- Very Low Supply Current Drain (0.8mA)—Independent Of Supply Voltage
- Low Input Biasing Current:25 nA
- Low Input Offset Current:5.0 nA
- Maximum Offset Voltage:5.0mV
- Input Differential Voltage Range Is Same With Supply Voltage Range
- Compatible With TTL,DTL,ECL,MOS and CMOS

Applications

- Vacuum robot
- Single phase UPS
- Server PSU
- Cordless power tool
- Wireless infrastructure
- Applicances
- Building automation
- Factory automation & control
- Motor drives
- Infotainment & cluster

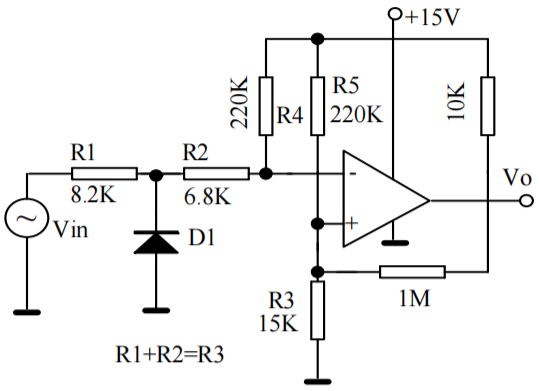
Applications



D1 prevents input from going negative by more than 0.6 V.

$R1 + R2 = R3$

$R3 \leq \frac{R5}{10}$ for small error in zero crossing.
