REQUIREMENTS

Locking arrangement Positive locking shall be accomplished and shall prevent motion of the toggle lever until the locking mechanism is manually released.

The force required to release the locking mechanism shall be 3 to 5 pounds.

The locking means at the top of the toggle bushing shall be capable of withstanding a torque of 20 inch-pounds applied in both directions immediately following the humidity test.

Part number example MS24658-21A (locking combination 'A').

All switches on this standard are designed so that the movement of the switch mechanism is opposite to that of the toggle lever

Maximum weight is .10 pound.

Electrical rating: See table I.
