UTS SERIES

Overview

■ Typical Applications	06
■ Features & Benefits	07
■ Range Overview	08
■ Layouts	10
■ General Technical Characteristics	12

Typical Applications

Energy - Power

Off-Road - Mining - Railway

Building Automation & Control

Instrumentation - Measurement

Telecom - Data infrastructure

Stage - Light

Features & Benefits

WATER PROOF

IP68/69K Dynamic Mated & Unmated

Ideal for outdoor and indoor dynamic applications requiring continuous underwater immersion, routine pressure washing and dust protection.

UV RESISTANT

No Degradation Over Time

No mechanical deterioration or important color variation after 5 years of exposure in natural environment (equivalent exposure to sun and moisture as per ISO4892) and F1 rated per UL 746C.

UL/IEC COMPLIANT

Qualified & Certified

In accordance with:

- UL 1977 - Certificate ECBT2, File number: E169916
- CSA C22.2 n°182.3 - Certificate ECBT8, File number: E169916.

QUICK MATING

1/3 Bayonet Coupling

With only 1/3 twist of the bayonet coupling system, connectors are mated with audible "click" and tactile feel to confirm proper mating. This mating feature eliminates connection uncertainty and reduces time and labor during installation.

COST SAVINGS

Mixed Power & Signal Layouts

Power supply and signal transmission can be combined in a unique interconnect solution to reduce system complexity and minimize component and installation costs.

Contacts Supplied Separately

Choice of Crimp Contacts

- Machined
- Stamped and Formed
- Coaxial

PCB Contacts

Fiber Optic

**Contacts Loaded
Screw Termination**

**Contacts Loaded
Hand solder**

Plug

UTS Sealed Unmated

Sealed Unmated: IP68/69K dynamic
MIL-C-26482 compatible
UV resistant
UL/IEC compliant

Corrosion-proof
Plastic housing

Overmolded Cable Assembly

Overview

UTS Standard Receptacle

UTS Backshells

Cable Sealing

Double Sealing (Wires + Cable)

Grommet

Single Wire Sealed

Flexible conduit adaptors

Contact us for more information

UTS Sealed Unmated Receptacle

UTS PCB Contacts

Stand-offs to allow cleaning after soldering

Metal hold down clips

- to lock the connector easily on the PCB and to release stress on solder joints
- suitable for soldering in a metallic hole

Low profile housing to limit space between panel and PCB

Pre-assembled PCB contacts

- machined or stamped versions available
- different solder tail lengths possible
- different plating options

Fig. 12

Technical drawing of a circular component with mounting holes. The drawing shows a central circle with a diameter of $\varnothing 0.720''$ and four mounting holes arranged in a square pattern with a side length of $0.818''$. The outer diameter of the component is $\varnothing 0.129''$. The drawing is labeled with dimensions and mounting points:

- Front mounting $\varnothing 0.720''$
- Rear mounting $\varnothing 0.877''$
- Mounting holes: $\varnothing 0.129''$
- Mounting holes: $0.818''$

Technical drawing of a 4-hole flange. The drawing shows a circular flange with four mounting holes labeled 1, 2, 3, and 4. The central hole has a diameter of $\varnothing 1.240"$. The outer diameter of the flange is $\varnothing 1.200"$. The distance between the centers of opposite holes is $0.393"$. The distance between the centers of adjacent holes is $0.122"$. The outer diameter of the mounting holes is $\varnothing 0.866"$. The outer diameter of the flange is $\varnothing 1.031"$. The hole size is $0.051"$. The angle between the centerlines of opposite holes is 180° . The angle between the centerlines of adjacent holes is 90° . The angle between the centerline of a hole and the horizontal centerline is 22° . The angle between the centerline of a hole and the vertical centerline is 68° . The angle between the centerline of a hole and the diagonal centerline is 30° .

Dimensions

5

Technical drawing of a mechanical assembly. The drawing shows a cross-section of a component with a central shaft and a flange. The shaft has a diameter of $\varnothing 0.877$ inches. The flange has a thickness of 0.118 inches. The distance from the center of the shaft to the center of the flange is 0.708 inches. The distance from the center of the shaft to the center of the flange is 0.137 inches. The drawing is labeled with dimensions in inches.

[illegible]

Technical drawing of a hexagonal nut. The drawing shows the top view of the nut, which is hexagonal in shape. The dimensions are indicated as follows:

- The width across the flats (the distance between two opposite flat sides) is 1.196 inch.
- The height (the distance from the top flat side to the bottom flat side) is 1.381 inch.

The drawing also shows the internal threads of the nut, which are represented by concentric circles and lines indicating the thread profile.

Technical drawing of the front view of a square flange. The central circular hole has a diameter of $\varnothing 0.846''$. The four mounting holes are arranged in a square pattern with a side length of $0.913''$. The outer square flange has a side length of $0.913''$. The mounting holes have a diameter of $\varnothing 0.129''$. The drawing is labeled "Front mounting $\varnothing 0.846''$ " and "Rear mounting $\varnothing 0.988''$ ".

Contacts

Description

The UTS series is delivered with (solder, PCB versions and screw termination) or without contact (crimp version) and offers the unique feature to use the same contact style in any layout with the same active part size (i.e. #20, #16, #12, etc.). This provides our customers with an easy solution to buy only one type of contact to equip all their connectors even if housings/shell sizes are different.

This provides the benefit of standardization and subsequent reduced inventory costs. In addition, it eliminates the need for added tooling and simplifies the assembly process. SOURIAU contacts are designed for simple snap-in installation and further eliminate the need for insertion tooling.

In addition to the below "crimp" style contact options, the UTS series can also be equipped with PCB contacts.

Crimp contacts are available in different versions:

• Machined

• Stamped & Formed

• Coaxial

• Fiber Optic

Contact Plating Selector Guide

Once the contact size has been selected, the next step is to decide on which type to use. SOURIAU offers two main types of electrical contacts:

- Machined
- Stamped & Formed

Machined contacts are generally chosen as a better solution for power applications or when lower quantities are needed.

Stamped & Formed contacts offer the ability to be crimped automatically which makes them more suitable for high volume production applications.

The next decision to make is: What plating should I choose?

The graph below can help guide you to plating recommendations based on application, mating cycles and current/voltage needs.

Note: To avoid galvanic couples, fretting corrosion and at the end interruption of electrical signal do not mix different platings (i.e. tin plated pin contacts with gold plated socket contacts).

If customer mixes different contact platings, Souriau can't guarantee electrical performances.

Contact Selector Guide

Contacts supplied separately

Electrical characteristics: contact resistance		
#20 Ø1.0mm	Machined	< 6mΩ
	Stamped & Formed	< 6mΩ
#16 Ø1.6mm	Machined	< 3mΩ
	Stamped & Formed	< 6mΩ
#12 Ø2.4mm	Machined	< 5mΩ
#8 Ø3.6mm	Machined	< 5mΩ

Available platings (contacts supplied separately)	
A	2μ Ni + 2μ Ag
J	Gold flash over 2μ Ni
K	Min 0.4μ gold over 2μ Ni
S31	Active part: 0.4μ gold over Ni Crimp area: Nickel
S18	Active part: 0.75μ gold min over 2μ Ni Crimp area: 1.3μ tin over Ni Other: Nickel
S25 S26	Active part: 0.75μ Au over Ni Crimp area: flash Au over Ni
TK6	2-5μ Sn pre-plated
D70	Superseded by S31
S6	Superseded by S18
Other platings on request (contacts supplied separately)	
T	T: 2μ Ni mini all over + 3 to 5 μm Sn all over
D28	0.75μ gold over Ni
NPC	2 μm Ni

Contact preloaded

Electrical characteristics: contact resistance		
#20 Ø1.0mm	Machined	< 4mΩ
#16 Ø1.6mm	Machined	< 3mΩ

Available plating (contact preloaded)	
Min 0.4μ gold over 0.8μ Ni	

Packaging

Due to the wide variety of applications, contact packaging is offered for small series (bulk package) and high volume production (reeled contacts):

Size contacts #20 (Ø1.0mm) & #16 (Ø1.6mm)

- 25 pieces loose package (Stamped & Formed contacts)

- 50 pieces bulk package (Machined contacts)

- 1,000 pieces bulk package (Machined contacts)

- 3,000 pieces reeled (Stamped & Formed contacts)

- 2,000 pieces reeled (Machined contacts)

Size contacts #12 (Ø2.4mm) & #8 (Ø3.6mm)

- 100 pieces bulk package (Machined contacts)

Note: 1,000 pieces bulk package available by adding 1000 at the end of the part number: e.g. RC16M23K1000
2,000 pieces reeled package available by adding K at the beginning of the part number: e.g. KRC16M23K

First Mate Last Break contacts should be chosen only if the cavity is not marked with the ground symbol. For cavities marked with the ground symbol, standard contacts will fulfill the same role as a first mate, last break contact used in a standard cavity.

Ground symbol

#16 Coaxial Contacts

Coaxial Contact Range

SOURIAU provides 2 types of coaxial contacts suitable for 50 or 75Ω, coaxial cable or twisted pair cable.

Monocrimp coaxial contact

- The monocrimp one-piece coaxial contacts offer high reliability plus the economic advantage of a 95% reduction in installation time over conventional assembly methods.
- This economy is achieved by simultaneously crimping both the inner conductor and outer braid or drain wire.

Multipiece crimp coaxial contact

- The inner conductor and outer braid is crimped individually.
- The thermoplastic insulating bushing in the outer body is designed to accept and permanently retain the inner contact.
- An outer ferrule is used to connect the braid to the outer contact and provide cable support to ensure against bending and vibration.

Suitable for coaxial cable or twisted cable

- For jacket diameter from 0.070" to 0.120"
Inner conductor up to 0.096" diameter

- For jacket diameter from 0.025" to 0.057"
Inner conductor from AWG30 to AWG24

Fiber Optic Contacts

Description

Size 16 fiber optic contacts for UTS and other TRIM TRIO® connectors

Size 16 fiber optic contacts are designed for the integration of optical links in UTS and other TRIM TRIO® cable connectors.

The Fiber optic contacts are designed to accommodate:

- Plastic Optical Fiber (POF) 0.039" core and 0.086" jacket

Typical features and benefits are:

- Socket contact is spring loaded to avoid any air gap between the two optical faces.
- Low insertion loss is provided by high precision pieces.
- Single jumpers, multiway harness and active device housings can be supplied regarding customer requirement.

Technical Characteristics

Performance

- Fiber type: POF
- Wave length: 650 nm
- Optical insertion loss (typ.): 2 dB max.
- Jacketed external diameter: 0.086"
- Temperature range: -25°C to +70°C
- Cable retention: 49N
- Mating cycles without cleaning: 50
- Max. mating cycles: 500

Construction

- Contact body: Copper alloy

Connector accommodation

Any TRIM TRIO® size 16 contact can be used in any contact position in any connector in the TRIM TRIO® size 16 interconnection system:
UTP, UTS, UTG, UTO, UTL.

Automatic Crimping Tools

SOURIAU

Mecal is a leader in manufacturing tooling for crimping terminals over a stripped wire.

Established in 1976, Mecal has become one of the world's leading companies dedicated to the design and manufacture of semi automatic production tools for strip fed, open barrel crimp terminals, serving the Automotive, Telecom and Datacom industries.

The extreme environment interconnect specialist "from deep sea to deep space".

SOURIAU designs, manufactures and markets high performance interconnect solutions for severe environments dedicated to the aerospace, defense, light and heavy industry markets.

SOURIAU has been working in partnership with Mecal for many years. With sales offices located in all major industrial regions of the world, the combined strengths of both organizations has resulted in a truly global solution to all your production tooling needs.

Crimping

One of the key factors which affects the performance of a connector is the way contacts are terminated. Crimped connections are nowadays seen as the best solution to ensure quality throughout the lifetime of the product. Here are some reasons why we recommend this method of termination for UTS connectors:

Advantages (Extract from the IEC 60352-2):

- Efficient processing of connections at each production level
- Processing by fully-automatic or semi-automatic crimping machines, or with hand operated tools
- No cold-soldered joints
- No degradation of the spring characteristic of female contacts by the soldering temperature

- No health risk from heavy metal and flux steam
- Preservation of conductor flexibility behind the crimped connection
- No burnt, discolored and overheated wire insulation
- Good connections with reproducible electrical and mechanical performances
- Easy production control.

To ensure that the crimp tooling is performing according to original specifications, it is important to carry out regular checks. A common way to check the performance of tooling is with a simple pull test, ideally using a dedicated electric pull tester. Minimum recommended pull forces are indicated in the tables below:

Active contact part	Contact type	Die location on heads	Wire section range	Section (inches ²)	Tensile straight test (mini)	Height (inches) H (±0.002")	Width (inches) W (±0.002")	Tooling head p/n

Handle & Interchangeable Heads

User Guide

- 1) Fully close then release the tool, keep it open.
Open the 2 pins.

- 2) Choose the adapter head (sold separately), keep vertical and slide it into the handle until the mechanical end.

- 3) Close the two pins simultaneously to maintain the head.

- 4) Strip the cable properly check the recommended size in the catalog on page 180.

- 5) Place conductors, with no deteriorations, in the bucket contact.
All strands to be located in the crimp bucket.

- 6) Position the contact in the bottom of the tool by checking its orientation.

- 7) To crimp contact assembly-cable, tighten sharply the clip to the end of the mechanism (maxi 175N).

- 8) To control crimp quality, slightly pull cable with two fingers to control retention.

Insertion & Extraction Tools

Contact size	Insertion tool
#20 Ø0.039"	RTM205
#16 Ø0.062"	RTM205

Contact size	Extraction tools
#20 Ø0.039"	RX20D44
#16 Ø0.062"	RX2025GE1
#12 Ø0.094"	51060210924
#8 Ø0.141"	51060210936

Contact extraction instruction

Place the tool into the cavity from front face of the connector, push on the handle, then remove the contact.

Overmolded Cable Assembly Dimensions

Shell size	UTS0		UTS7	
	L max	L1 max	L max	L1 max
10	3.44"	3.2"	3.67"	3.2"
12	3.55"	3.3"	3.79"	3.3"
14	3.85"	3.6"	4.08"	3.6"

Note: all dimensions are in inches

Assembly Instructions

UTS0 Assembly (Mounting Suggestion)

- Strip wires, crimp or solder contacts (see pages 176 & 177)
- Insert contacts into connector cavities (insert manually or use tool RTM205 crimp contacts)
- Place receptacle in the panel cut-out
- Secure receptacle with screws (not supplied)
Tighten screws: M2.5 (recommended torque: see table below)
- For complete sealing of the system use optional gasket and sealed screw solution (not sold by SOURIAU).

Front mounting: Crimp version

Rear mounting: Crimp version

Front mounting: Solder version

Rear mounting: Solder version

	Shell size				
	8	10	12	14	18
Screw tightening torque (Nm)	0.30/0.40	0.30/0.40	0.30/0.40	0.30/0.40	0.35/0.45

UTS7 Assembly (Mounting Suggestion)

- Strip wires and crimp contacts (see pages 176 & 177)
- Insert contacts into connector cavities (insert manually or use tool RTM205 crimp contacts)
- Seat o-ring, place receptacle in the panel cut-out
- Tighten jam nut

Shell size	Jam nut torque (Nm) maxi	Exterior jam nut dim. (inches)	Ø Wire	
			Standard version	Discrete wire sealing
8	1.5	0.748"	0.125" max.	From 0.066" to 0.118"
10	3	0.874"		
12	4	1.063"		
14	5	1.185"		
18	5	1.437"		

Threaded receptacle

Shell size	Jam nut torque (Nm) maxi	Threading	P mini (mm)
8	2.5	M12 x 1.5	0.303"
10	3.75	M16 x 1.5	0.303"
12	3.75	M20 x 1.5	0.409"
14	4.18	1/2"	0.326"
18	4.76	3/4"	0.456"

UTS6 or UTS7 with GN Backshell Assembly

- Strip wires and crimp contacts (see pages 176 & 177)
- Insert first contact into the grommet (first contact in cavity A, no tool is required). Then insert the contact in the connector cavity A (insert manually or use tool RTM205)
- Insert the other contacts
- Tighten the nut to rear of either UTS6 or UTS7 (recommended torque values to be applied according to the table below).

Shell size	layout	Nut tightening torque (Nm)	Ø Wire
10	4	1	From 0.066" to 0.118"
12	8	1.5	
14	7	1.5	
14	12	1.5	

Assembly Instructions (Continued)

UTS1JC or UTS6JC Assembly: Crimp Version

- Slide accessories onto the cable

Make sure the seal is positioned as shown.

- Mate the plug with a corresponding counter part
- Strip external cable jacket
- Strip wires and crimp contacts (see pages 176 & 177)
- Insert contacts into connector cavities (insert manually or use tool RTM205)
- Tighten adapter with plug UTS6 or receptacle UTS1, choose right seal (waste the other seal)
- Tighten the nut to rear of either UTS1 or UTS6 (recommended torque values to be applied according table to the right)
- Caution: only one of both delivered gasket should be used !

Shell size	Recommended jacket strip length (inches)		Adapter tightening torque (Nm)	Nut tightening torque (Nm)	Ø Cable range Standard seal (inches)	Ø Cable range Reducing seal (inches)	Ø Wire (inches)
	Male	Female					
10	0.826"	1.141"	1.5	1	0.098"/0.0314"	0.059"/0.196"	From 0.066" to 0.118"

18	1.456"	1.771"	4	3.5	0.354"/0.708"	0.275"/0.629"	

UTS6JC Assembly: Solder Version

- Slide accessories onto the cable

Make sure the seal is positioned as shown.

- Mate the plug with a corresponding receptacle
- Strip external cable jacket
- Strip wires and crimp contacts (see pages 176 & 177)
- Insert contacts into connector cavities (insert manually or use tool RTM205)
- Tighten adapter with plug, choose right seal (waste the other seal)
- Tighten the nut to rear of either UTS6 (recommended torque values to be applied according table to the right)
- Caution: only one of both delivered gasket should be used !

Shell size	Recommended jacket strip length (inches)	Adapter tightening torque (Nm)	Nut tightening torque (Nm)	Ø Cable range Standard seal (inches)	Ø Cable range Reducing seal (inches)	Ø Wire (inches)
	Male					
8	0.669"	1	0.75	0.098"/0.255"	1.5/0.196"	From 0.066" to 0.118"
10	0.826"	1.5	1	0.098"/0.314"	1.5/0.196"	
12	0.984"	2	2.5	0.196"/0.472"	0.118"/0.354"	
14	1.141"	3	2.5	0.275"/0.551"	0.196"/0.472"	

Note: all dimensions are in inches

UTS6JC Screw Termination Assembly

- Mate the plug with a corresponding receptacle equipped with its contacts
- Choose and place right seal depending on cable diameter (see table below)

- Strip the wires (strip length 0.228")

- Check the mechanical cable retention, by gently pulling the cable with 2 fingers
- Tighten adapter with the plug (recommended torque: see table)

- Slide accessories on the cable
- Strip external jacket (see table below).

- Place the conductors in the contact barrel. Make sure all conductor strands are inside the barrel
- Tight the contact screws, advised torque 20 Ncm

- Tighten backshell nut with adapter (recommended torque: see table below) (cables should not turn into the backshell during this operation).

Shell size	Recommended jacket strip length (inches)		Adapter tightening torque (Nm)	Nut tightening torque (Nm)	Ø Cable range Standard seal (inches)	Ø Cable range Reducing seal (inches)	Ø Wire (inches)
	Male	Female

Assembly Instructions (Continued)

UTS1GJC or UTS6GJC Assembly

- Slide accessories onto the cable (make sure to keep compression ring on the grommet)
- Strip external cable jacket
- Strip wires and crimp contacts (see pages 176 & 177)
- Insert first contact into the grommet (first contact in cavity A, no tool is required). Then insert the contact in the connector cavity A (insert manually or use tool RTM205)
- Place the grommet and compression ring on the insulator
- Insert the other contacts
- Tighten adapter with plug UTS6 or receptacle UTS1, choose right seal (waste the other seal)
- Tighten the nut to rear of either UTS1 or UTS6 (recommended torque values to be applied according to the table right).

Shell size	Recommended jacket strip length (inches)		Adapter tightening torque (Nm)	Nut tightening torque (Nm)	Ø Cable range Standard seal (inches)	Ø Cable range Reducing seal (inches)	Ø Wire (inches)
	Male	Female

Mating Procedure

UTS Coupling Procedure

The pictures below provide step by step instructions on how to mate a plug and receptacle connector in order to avoid damaging any of the contacts.

- Identify the primary key of each connector.

- Align the primary keys of the connectors.

- Incorrect positioning:

- Offer the plug to the receptacle.

- Turn coupling ring until you hear a 'click'

Rated Current & Working Voltage

Current Carrying Capacity

The current carrying capacity of a connector is limited by the thermal properties of materials used in its construction. The amount of current that can be handled depends on the size of cable used, the ambient temperature and the heat that is generated inside the connector. Part 3 of the IEC 60512 standard determines through a derating curve, the maximum current permissible, which varies from one layout to another (Fig.1 & Fig.2). Wire size plays an important role in dissipating heat and avoid overheating (Fig.1 & Fig.3).

Please note that the curve should be adjusted when dealing with potential hot spots, which can occur as a result of unequal loading of current across a number of contacts. As a general rule, it is best to avoid placing power handling contacts in the middle of the connector; try to locate them towards the edge where heat can be dissipated more effectively. Eventually you should find a level which represents the permissible operating range:

Fig.1: UTS 12-4 – 1.5mm² wires

Fig.2: UTS 12-8 – 1.5mm² wires

Fig.3: UTS 12-4 – 2.5mm² wires

The **rated current** is defined as uninterrupted continuous current that a connector can take when all contacts are energized simultaneously without exceeding the maximum limit of temperature. The earth contact is never loaded.

UV Resistance

Exposure in Natural Environment

Solar radiation affects all materials, but plastics can be susceptible to extreme degradation over time. The choice of materials for the UTS series was therefore a critical consideration.

All over the world we are not exposed to the same amount of energy given by the sun. The chart shown here clearly illustrates this.

So we performed test according to the ISO 4892-2 and simulated 5 years exposure to outdoor environments (temperature, humidity, etc.).

After this period there was no significant colour variation, no crazing, no cracking and no major variation of mechanical properties.

In addition, we asked UL to perform UV test per the UL746C. Our material has been rated F1 which is the highest level in this standard.

Yearly mean of daily irradiation in UV (280-400 nm) on horizontal plane (J/cm²) (1990-2004)

UL94 + UL1977

Underwriter Laboratories

There are two main standards for industrial connectors: UL94 & UL1977

UL94

This standard is dedicated to plastics flammability. It characterises how the material burns in various orientation and thicknesses.

The UTS series has been rated at **V-0 for UTS sealed mated & HB for UTS sealed unmated.**

Procedure: A specimen is supported in a vertical or horizontal position and a flame is applied to the bottom of the specimen. The flame is applied for ten seconds and then removed until flaming stops, at which time the flame is reapplied for another ten seconds and then removed. Two sets of five specimens are tested.

V-0 Vertical burning:

- Specimens must not burn with flaming combustion for more than 10 seconds after each test flame application
- Total flaming combustion time must not exceed 50 seconds for each set of 5 specimens
- Specimens must not burn with flaming or glowing combustion up to the specimen holding clamp
- Specimens must not drip flaming particles that ignite the cotton
- No specimen can have glowing combustion remain for longer than 30 seconds after removal of the test flame.

HB Horizontal burning:

- A material classified HB shall not have a burning rate exceeding 40 mm per minute over a 75 mm span for specimens having a thickness of 3.0 to 13 mm
- A material classified HB shall not have a burning rate exceeding 75 mm per minute over a 75 mm span for specimens having a thickness less than 3.0 mm
- A material classified HB shall cease to burn before the 100 mm reference mark.

UL1977

There are several standards which deal with plug and receptacle. Each of them is only for a small area of applications. It could be telecommunication, etc. The UL 1977 covers single and multipole connectors intended for factory assembly.

Requirements apply to devices taking into account intensity and voltage. The categories are as follows:

	0	30 V (42 V peak)	600 V
0	Type 0		Type 1A
31 A	Type 1B		Type 2
			Type 3
1000 A	Type 4		

According to above table, the level of performance that has to be reached could be different. Most of them are explained in the following page.

Insulating materials:

Material uses for electrical insulation, as a minimum, have to comply with the characteristics shown below:

• Minimum ratings for polymeric materials

Type	Flame rating	Relative thermal index (RTI) Electrical/mechanical w/o impact */**
0	-	50/50
1A	HB	50/50
1B	HB	50/50
2	HB	50/50
3	HB	50/50
4	HB	50/50

* The RTI of the material shall not be lower than the temperature measured during the Temperature Test.

** For a thickness less than that for which a value has been established, the RTI of the minimum thickness with an established value shall be used.

Assembly:

Connector has to be keyed to prevent any mismatching that can damage the machine or hurt the user. In the same way, plugs and sockets have to be equipped to protect persons against contact with live parts.

Finally the identified grounding contact shall be located so that the corresponding electrical continuity has to be completed before any other contact.

UL94 + UL1977 (Continued)

Underwriter Laboratories  US

UL1977

Spacing:

For a 250V max connector, distance through air or over material shall be 1.2mm whereas from 250V to 600V connector the spacing is 3.2mm minimum. These distances have to be taken between uninsulated live parts as shown in the matrix below:

• Applicability of spacing requirements

Type	Uninsulated live part - uninsulated live part of opposite polarity	Uninsulated live part - uninsulated grounded metal part	Uninsulated live part - exposed dead metal part
0	No	No	No
1A	Yes	Yes	Yes
1B	Yes	Yes	No
2	Yes	Yes	Yes
3	Yes	Yes	Yes
4	Yes	Yes	Yes

An alternative way to determine voltage rating is with the Dielectric-Withstand test. If during one minute there is no arc-over or breakdown the rated voltage is given as shown below:

- a) 500 volts for a type 1B device
- b) 1000 volts plus twice rated voltage for types 1A, 2, 3 and 4 devices.

Marking:

A device shall be legibly marked with the manufacturer's trade name, trade mark, or other descriptive marking by which the organization responsible for the product may be identified. (Exception: If the device is too small, or where the legibility would be difficult to attain, the manufacturer's name, trademark, or other descriptive marking may appear on the smallest unit container or carton)

The following shall be marked on the device or on the smallest unit container or carton or on a stuffer sheet in the smallest unit container or carton:

- a) The catalog number or an equivalent designation
- b) The electrical rating in both volts and amperes, if assigned
- c) Whether ac or dc, if restricted
- d) Flammability class, if identified

Example - Marking for the arrangement 10-3:

10A 500V UL94 V-0

IEC 61984 & IP Codes Explained

IEC 61984

The norm is dedicated to connectors with rated voltage above 50V and up to 1000V and rated currents up to 125A per contact. Depending on your application connectors should be compliant with another standard. This has to be double checked with the customer.

There are a lot of constructional requirements and performances specified in that standard. Most of them are illustrated in greater details hereafter.

Provisions for earthing:

The UTS connector is intended to be used on Class I or Class III (see IEC 61140) systems. Even if the purpose of our connector is not to interrupt current, there is a need to add a protective earth contact. This one shall be a "First mate, last break" style. Critically, among all of the normal assumptions we make in designing a connector, this contact has to be considered as a live part and must be protected attached to the ground wire.

IP Code:

IP is a coding system defined by the IEC 60529 to indicate the degrees of protection provided by an enclosure. The aim of this is to give information regarding the accessibility of live parts against ingress of water and other foreign bodies.

1 st digit	Degree of protection	2 nd digit	Degree of protection
0	No protection against accidental contact. No protection against solid foreign bodies.	0	No protection against water.
1	Protection against contact with any large area by hand and against large solid foreign bodies with a diameter bigger than 50 mm.	1	Drip-proof. Protection against vertical water drips.
2	Protection against contact with the fingers. Protection against solid foreign bodies with a diameter bigger than 12 mm.	2	Drip-proof. Protection against water drips up to a 15° angle.
3	Protection against tools, wires or similar objects with a diameter bigger than 2.5 mm. Protection against small solid bodies with a diameter bigger than 2.5 mm.	3	Spray-proof. Protection against diagonal water drips up to a 60° angle.
4	Same as 3 however diameter is bigger than 1 mm.	4	Splash-proof. Protection against splashed water from all directions.
5	Full protection against contact. Protection against interior injurious dust deposits.	5	Hose-proof. Protection against water (out of a nozzle) from all directions.
6	Total protection against contact. Protection against penetration of dust.	6	Protection against temporary flooding.
		7	Protection against temporary immersions.
		8	Protection against water pressure. Pressure to be specified by supplier.

UTS offers high sealing performance IP68 / 69K...
Even in dynamic situations.

In addition to the IEC 60529 we conjointly use the DIN 40050 part 9 which are dedicated to road vehicles. The main differences are:

- **First digit:** 5 replaced by 5K, 6 by 6K. In the DIN the tested equipment is not depressurized as it is in the IEC.
- **Second digit:** 5K and 6K has been added and are equivalent respectively to 5 and 6 but with higher pressure. 9K which represents the High pressure cleaning.

9K	High pressure hose-proof. Protection against high pressure water (out of a nozzle) from all directions.
----	--

IEC 61984 & IP Codes Explained (Continued)

IEC 61984

Overvoltage

UTS connectors are qualified to be used on systems rated at Overvoltage category III

Per the IEC 60664-1 (formerly VDE 0110) each category is linked to the end application and where the device will be implemented:

- **Category IV** (primary overcurrent protection equipment):
Origin of the installation
- **Category III** (any fixed installation with a permanent connection)
Fixed installation and equipment and for cases where the reliability and the availability is subject to special requirements
- **Category II** (domestic appliances):
Energy consuming equipment to be supplied from the fixed installation
- **Category I** (protected electronic circuit):
For connection to circuit in which measures are taken to limit transient overvoltage.

Pollution degree

Per the IEC 60664-1 (formerly VDE 0110) the environment affects the performance of the insulation. Particles can build a bridge between two metal parts. As a rule dust mixed with water can be conductive and more generally speaking metal dust is conductive. Finally, the standard defines 4 levels of pollution:

- **Degree 1** (Air conditioned dry room):
No pollution or only dry, non conductive pollution occurs. The pollution has no influence.
- **Degree 2** (Personal computer in a residential area):
Only non conductive pollution occurs except that occasionally a temporary conductivity caused by condensation is to be expected.
- **Degree 3** (Machine tools):
Conductive pollution occurs or dry non-conductive pollution occurs which becomes conductive due to condensation which is to be expected.
- **Degree 4** (Equipments on roof, locomotives):
Continuous conductivity occurs due to conductive dust, rain or other wet conditions.

Finally, the harsher the environment is, the longer clearance and creepage distances should be. Nonetheless, according the IEC 61984, enclosure rated at IP54 or higher can be dimensioned for a lower pollution degree. This applies to mated connectors disengaged for test and maintenance.

Marking

The marking should give enough details to the user to know what the main characteristics are and without going deep in technical documentation. Below examples identify the suitability of the connector:

- **Example 1:**
Marking of a connector with rated current 16A, rated voltage 400V, rated impulse voltage 6kV and pollution degree 3, 2 and 1 for use in any system, preferably unearthed or delta-earthed systems:

16A 400V 6kV 3

- **Example 2:**
Marking of a connector with rated current 16A, rated insulation voltages line-to-earth 250V, line-to-line 400V, rated impulse voltage 4kV and pollution degree 3, 2 and 1 for use in earthed systems:

16A 250V 400V 4kV 3

IEC 61140 Explained

IEC 61140

On a daily basis, we are using many electrical appliances, some are grounded, and some are not. The levels of grounding protection are clearly defined by the International Electrotechnical Commission standard IEC 61140, a standard that has an influence on our connectors and how they should be used; our customers therefore need to pay particular attention to the three categories defined within this standard to ensure compatibility with their system. Everything explained hereafter is valid for connectors not intended to interrupt current.

Class I:

Devices which belong to this category have their chassis grounded via the ground wire (green/yellow in Europe, green in the US, Canada and Japan). A fault in the appliance might cause a live conductor to energize the casing. In this case, the current flows to the ground conductor and the circuit interrupter will cut off the power supply. In case of the UTS series, it means the envelope (coupling ring, backshell and housing) may become live, therefore, care needs to be taken to attach the connector to the ground. This is usually done via the ground conductor using a splice between the ground contact and the housing.

Class II:

Products in this category have reinforced insulation, meaning that the casing does not need to be connected to ground. In this case, the possibility of electric shock has been removed. Most of the time, reinforced insulation means double insulation, i.e. the second layer will take over the first one in case the first one fails. The UTS series is not designed to comply with this standard, so we cannot recommend it for this product category.

Note: UL 1310 also defines a class II device, but in that case this is just to set the upper limit of use, like a wall charger for our cell phone.

Class III:

In this category, electrical appliances are fed by a low voltage source (<48VAC or < 120VDC). In normal conditions live conductors can be accessible without any risk for the end user. No particular attention needs to be taken in regards to UTS series when it comes to a class III device.

Conclusion:

UTS series can be used in class I and class III environments, but each category affects the product performance. Throughout the catalog, current and voltage ratings have been given for class I devices keeping in mind the ground conductor needs to be attached according to recommended wiring instructions.

Note: Special applications like recreational vehicles are not under the scope of the IEC 61140.

What is NEMA Rating ?

- NEMA ratings vs IP ratings

Whereas IP ratings only consider protection against ingress of foreign bodies (first digit) and ingress of water (second digit), NEMA ratings consider these but also verify protection from external ice, corrosive materials, oil immersion, etc.

The correlation between NEMA & IP being limited only to dust and water, we can state that a NEMA type is equivalent to an IP rating but it is not possible to say the contrary.

Below a list of some NEMA standards:

Enclosure rating	IP20	IP22	IP55	IP64	IP65	IP66	IP67	IP68
Type 1	•							
Type 3				•				
Type 3R		•						
Type 3S				•				
Type 4						•		
Type 4X						•		
Type 6							•	
Type 6P								•
Type 12			•					
Type 13					•			

• indicates compliance

Type 6 rating can be either Type 6 or Type 6P - please see below:

6	IP67	Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment, falling dirt, hose-directed water, the entry of water during occasional temporary submersion at a limited depth and damage from external ice formation.
6P	IP68	Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment, falling dirt, hose-directed water, the entry of water during prolonged submersion at a limited depth and damage from external ice formation.

Ethernet for the Layman

In order to explain basic Ethernet theory, we can use a functional comparison to a busy city with highways, buildings and cars. To illustrate this, the table below provides correlation between the different components/pieces/links that encompass Ethernet network connectivity, and the larger scale infrastructure of a metropolitan city.

- **City:** The network itself
- **Buildings:** End equipment, PC, server, etc.
- **Roads:** Ethernet cabling
- **Cars:** Data packets, datagrams, bits, bytes, etc.
- **Tolls:** Firewalls
- **Bridges:** Connectors
- **Traffic laws:** Protocol/communication specifications

Ethernet Basics

Ethernet is a widely used communications protocol that is used to transmit data packets (datagrams) between network devices. Imagine a highway in a large metropolitan area six lanes wide at rush hour. The vehicles on the highway need rules to follow so that they get to their destination without crashing into each other. In an Ethernet network link, there could be 100 million bits of information transmitted in one second. In the Ethernet standard, there exist rules to govern packet structure, transmission requirements, error correction, communication with end equipment, etc.

Examining the differences between 100Mhz, 100 Base TX, Cat5e/Cat6. What does it all mean?

When discussing connectors and Ethernet, there are a few key details to be aware of:

- 100Mhz is a measurement of Frequency for the signal
 - Comparable to the Speed Limit of a highway
- 100BaseTX (or Fast Ethernet) is an Ethernet link standard and identifies available link bandwidth. The bandwidth is measured in units of MBits/S (megabits per second)
 - Comparable to the number of cars that pass a point in one second
- Cat5e/Cat6 are an EIA/TIA standard for performance and physical characteristics for cables and connectors
 - Comparable to performance specifications of the car and highway.

In connectors and cables, Fast Ethernet uses 2 pairs. One for transmit and one for receive. This way data traffic can flow in both directions simultaneously.

Ethernet for the Layman (Continued)

Souriau offering:

Standard solutions.

What about using coax contacts ?

Ethernet twisted pairs carry a symmetrical (balanced) signal. Once terminated into a coax contact, the inner core will be protected by a shield - but not the outer contact. Because of EMI issues, the signal will no longer be balanced. Conclusion - it does not work and is not recommended.

What about using Quadrax contacts ?

The Quadrax contact is used in railway applications because of the use of quad cable. In this specific market, the standard Ethernet twisted pairs wires cannot be offered, they are too thin and often solid (not stranded).

In the rest of industry, UTP (Unshielded Twisted Pairs) cables are widely used. The Quadrax contact is not designed to terminate them. And thus, are not advised for industrial applications.

Conclusion

To carry 100Mb/s data signal, 100BaseTX or Fast Ethernet recommends the use of Cat5e connectors as well as Cat5e cable with the support of a 100MHz signal. Nevertheless, a 100Mb/s signal can be transmitted in certain conditions (short distance, only one connector, lower frequency but a different code) thru many other connection materials - not necessarily Cat5e rated.

- Select appropriate monocrimp coax twisted pair contact and cable combination.
- Select appropriate crimp tooling (hand tool, S-die set, stop bushing).
- Strip the twisted pair cable to the designated wire strip lengths.
- Insert the stripped cable into the contact. One cable is to be inserted into the inside diameter of hyring, and pushed forward into the inner contact. The second cable is to be inserted between the outside diameter of hyring and the inside diameter of the outer contact body.
- Crimp the contact.

Cable strip length

Braid crimp (G) to be measured with die set fully closed

Inner conductor crimp (G) to be measured with die set fully closed

Glossary of Terms

• Clearance

Per the IEC 60664-1 it is the shortest distance between two conductive parts even over the air.

• Creepage distance

Per the IEC 60664-1 it represents the shortest distance along the surface of the insulating material between two conductive parts.

• Working voltage

Per the IEC 60664-1 it is the highest r.m.s. value of A.C. or D.C. voltage across any particular insulation which can occur when the equipment is supplied at rated voltage.

• Rated impulse voltage

Impulse withstands voltage value assigned by the manufacturer to the equipment or to a part of it characterizing the specified withstand capability of its insulation against transient overvoltage.

• Working current

It is the maximum continuous and not interrupted current able to be carried by all contacts without exceeding the maximum temperature of the insulating material.

• Transient voltage

Extract from the IEC 60664-1: Short duration overvoltage of a few millisecond or less, oscillatory or non-oscillatory, usually highly damped.

• CTI (Comparative Tracking Index)

The CTI value is commonly used to characterise the electrical breakdown properties of an insulating material. It allows users to know the tendency to create creepage paths. This value represents the maximum voltage after 50 drops of ammonium chloride solution without any breakdown.

• RTI (Relative temperature Index):

Extract from ULs website:

Maximum service temperature for a material, where a class of critical property will not be unacceptably compromised through chemical thermal degradation, over the reasonable life of an electrical product, relative to a reference material having a confirmed, acceptable corresponding performance defined RTI.

- **RTI Elec:** Electrical RTI, associated with critical electrical insulating properties.
- **RTI Mech Imp:** Mechanical Impact RTI, associated with critical impact resistance, resilience and flexibility properties.
- **RTI Mech Str:** Mechanical Strength (Mechanical without Impact) RTI, associated with critical mechanical strength where impact resistance, resilience and flexibility are not essential.

Discrimination/Keying Methods

In applications where similar connectors are used next to each other, mismatching can cause disturbances, system failure or even danger to operating personnel.

To eliminate mismatching, some Trim Trio® connectors are offered with discrimination keys to avoid interconnection system errors. In addition, the connector insert can also be rotated inside the shell to create custom keying options.

Note: Insert rotated in body (viewed from front face of male insert)

Connectors with rotated inserts can be ordered by adding the suffix W, X, Y or Z to the standard part number.

e.g. **UTS6JC104S** (N key) → **UTS6JC104SW** (W key)

Consult us for overmolded harnesses.

SMSPKE0 (only for UTS layouts using #16 contacts)

When one of these dummy contacts is used, the UTS connector will only mate with a connector which has a vacant cavity at the corresponding position.

The material used is polyamide 6.6.
