General Description

The is a dual SPDT low on-resistance analog switch. It can operate from a single 1.5V to 5.5V power supply.

The device offers low ON-state resistance and excellent ON-state resistance matching with break-before-make feature, to prevent signal distortion during the transferring of a signal from one channel to another.

The device is capable of true isolation. Even when $COMx$ overrides VCC , very little current will flow back to the supply.
