

## 1. 产品简介

汇聚产品使用无铅/锡元素材料制作。

藉由精确的介电材料配制及适当的导电浆料搭配, 以及自动化制程的稳定生产和严谨的质量把关, 以精确控管了介电设计厚度、电极完整性还有外端电子端极连接的良好特性, 实现了最佳可靠度的产品性能。

## 2. 用途

2. 1. 高压耦合/直流阻断

2. 5. 电源

2. 2. 背光逆变器

2. 3. LAN/WLAN接口

2. 4. 调制解调器

## 3. 型号标示:

## 9. 产品使用说明

| 项次  | 项目         | 说明                                                                                                                  |
|-----|------------|---------------------------------------------------------------------------------------------------------------------|
| 1   | 存储         | 1. 为了避免端子电极可焊性的损害以及老化影响, 建议依循以下条件进行储存置放:<br>室内环境: 温度: 5-40℃ / 湿度: 20%-70%RH.<br>并且应避免与含有硫酸, 氨气, 硫化氢或氯气等酸性碱性化学品同时存放. |
|     |            | 2. 无需用芯片组件时, 不可将包装好之产品拆装. 如果已经拆装并残留有未使用之余料者, 应尽快在以真空方式进行密封予以保存.                                                     |
|     |            | 3. 卷装包装或散装包装产品皆不可存放具有直接日照曝晒的区域环境之中, 这可能会造成包材老化或是胶带附着性能恶化, 甚至于产品端子氧化焊性失效可能.                                          |
|     |            | 4. 产品建议必须自交货后12个月内使用完毕, 使用前必须检测可焊性之状况.                                                                              |
| 2   | 使用         | 陶瓷芯片电容产品材料本质具: 高密度/坚硬/易碎/受磨耗之特性, 故容易被机械作用所损坏而造成破损或是裂痕. 因此组件必须格外小心使用, 避免污染或是碰撞损伤.                                    |
|     |            | 建议使用真空吸取方式或是塑胶夹具取放组件为恰当. 载带包装好之卷装产品, 较适用于自动化生产作业制程作业.                                                               |
| 3.1 | 作业<br>预热处理 | 为了降低及避免焊锡作业过程中的温度热冲击影响, 控制预热温度条件的考虑是必要的, 预热区段的温度升温速度不可大过于3℃为佳.                                                      |

系列名称    NV Series

| 5. 冷却处理： <p>焊锡后针对于芯片组件及基板材的冷却必须以自然降温的方式进行. 建议在以常温中自然降温方式进行以缓和应力的影响.</p>                                                                                                                                                      |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |      |                |     |       |     |      |     |      |     |     |   |   |           |     |     |   |   |       |     |     |   |   |      |      |     |   |   |      |      |                |   |   |      |               |   |   |           |      |                |   |   |      |               |   |   |       |      |     |   |   |
| 6. 清洁： <p>清洗系统的从芯片下除去焊剂残留物和污染物的能力是非常重要的. 所有焊剂残余物必须使用合适的电子级清洗溶剂以清除表面之污染, 以避免造成电极表面腐蚀. 最佳方式是透过超声波装置进行清洗作业以达到最佳效果. 得到良好的结果. 最佳清洗作业方式是透过对生产需求较为适适切的系统来选择, 如组件的组合, 助焊剂与焊锡膏类别或是组装方法等. 最终产品的清洁的状况还是取决于清洗系统的能力与搭配, 对于应用而言是非常重要的.</p> |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |      |                |     |       |     |      |     |      |     |     |   |   |           |     |     |   |   |       |     |     |   |   |      |      |     |   |   |      |      |                |   |   |      |               |   |   |           |      |                |   |   |      |               |   |   |       |      |     |   |   |
