

# Signal Isolated RS-485 Transceiver With Integrated DC to DC Converter

Preliminary Datasheet (EN) 0.0

**Subject to change without notice**

## Product Overview

NSIP93086 series are high reliability isolated full duplex RS-485 transceiver with integrated DC to DC converter. The NSIP93086 isolated DC to DC converter uses on-chip transformer. The feedback PWM signal is sent to primary side(Isolator Side1) by a digital isolator based on Novosense capacity isolation technology. The NSIP93086 series are safety certified by UL1577 supporting 5kVrms insulation withstand voltage, while the high integrated solution can help to simplify system design and improve reliability.

The Bus pins of NSIP93086 are protected from  $\pm 8\text{kV}$  system level ESD to  $\text{GND}_2$ . The device features a fail-safe circuitry, which guarantees a logic-high receiver output when the receiver inputs are open or shorted. The device have  $96\text{k}\Omega$  input impedance that allows up to 256 transceivers on the bus.

## Key Features

- Up to 5000Vrms Insulation voltage
- ISO-Power integrated isolated DC-to-DC converter
- I/O voltage range supports 1.8~5.25V MCU
- Power supply voltage:  
VDD: 3V to 5.25V  
VDDL: 1.8V to 5.25V
- Voltage conversion: 5V to 5V, 5V to 3.3V, 3.3V to 3.3V.
- Over current and over temperature protection
- High CMTI:  $\pm 150\text{kV}/\mu\text{s}$
- Data rate: 16Mbps
- Up to 256 transceivers on the bus
- High system level EMC performance:
- Operation temperature:  $-40^\circ\text{C} \sim 125^\circ\text{C}$
- RoHS-compliant packages: SOW16 SOW20

## Safety Regulatory Approvals

- UL recognition: up to  $5000\text{V}_{\text{RMS}}$  for 1 minute per UL1577
- CQC certification per GB4943.1
- CSA component notice 5A
- DIN VDE V 0884-17

## Applications

- Industrial automation system
- Isolated RS-485 communication
- Smart electric meter and water meter
- Security and protection monitoring

## Device Information

| Part Number      | Package | Body Size        |
|------------------|---------|------------------|
| NSIP93086C-DSWTR | SOW20   | 12.80mm × 7.50mm |
| NSIP93086C-DSWR  | SOW16   | 10.30mm × 7.50mm |
| NSIP93086H-DSWR  | SOW16   | 10.30mm × 7.50mm |

## 1. Pin Configuration and Functions

Figure 1.1 NSIP93086C-DSWTR Package

Table1.1NSIP93086V-DSWR Pin Configuration and Description

| PIN NO. | SYMBOL           | FUNCTION                                                                                                                                                      |
|---------|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1       | GND <sub>1</sub> | Ground 1, the ground reference for Isolator Side 1                                                                                                            |
| 2       | V <sub>DD</sub>  | Power Supply for Isolator Side 1. It is recommended this pin have a 0.1 $\mu$ F + 10 $\mu$ F capacitor to GND <sub>1</sub> (Pin1)                             |
| 3       | GND <sub>1</sub> | Ground 1, the ground reference for Isolator Side 1                                                                                                            |
| 4       | R                | Receiver output                                                                                                                                               |
| 5       | /RE              | Receiver enable input, this is an active low input                                                                                                            |
| 6       | DE               | Driver enable input, this is an active high input                                                                                                             |
| 7       | D                | Driver transmit data input                                                                                                                                    |
| 8       | VDDL             | Side1 I/O logic level                                                                                                                                         |
| 9       | GND <sub>1</sub> | Ground 1, the ground reference for Isolator Side 1                                                                                                            |
| 10      | GND <sub>2</sub> | Ground 2, the ground reference for Isolator Side 2                                                                                                            |
| 11      | SEL              | VISO output voltage select, VISO=5V when SEL short to VISO, VISO=3.3V when SEL short to GND <sub>2</sub> or floating.                                         |
| 12      | NC               | Not Connected                                                                                                                                                 |
| 13      | Y                | Non-inverting Driver Output. When the driver is disabled, or when VDD is powered down, Pin Y is put into a high impedance state to avoid overloading the bus. |
| 14      | GND <sub>2</sub> | Ground 2, the ground reference for Isolator Side 2.                                                                                                           |
| 15      | Z                | Inverting Driver Output. When the driver is disabled, or when VDD is powered down, Pin Z is put into a high impedance state to avoid overloading the bus.     |
| 16      | GND <sub>2</sub> | Ground 2, the ground reference for Isolator Side 2.                                                                                                           |

|    |                     |                                                                                                                                   |
|----|---------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 17 | B                   | Inverting Receiver Input                                                                                                          |
| 18 | A                   | Non-inverting Receiver Input                                                                                                      |
| 19 | V <sub>ISOOUT</sub> | Isolated Power Supply Output. It is recommended this pin have a 0.1 $\mu$ F and 10 $\mu$ F capacitor to GND <sub>2</sub> (Pin16). |
| 20 | GND <sub>2</sub>    | Ground 2, the ground reference for Isolator Side 2.                                                                               |

|---------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1       | V <sub>DD</sub>     | Power Supply for Isolator Side 1. It is recommended this pin have a 0.1 $\mu$ F + 10 $\mu$ F capacitor to GND <sub>1</sub> (Pin1).                                           |
| 2       | GND <sub>1</sub>    | Ground 1, the ground reference for Isolator Side 1                                                                                                                           |
| 3       | R                   | Receiver output                                                                                                                                                              |
| 4       | /RE                 | Receiver enable input, this is an active low input                                                                                                                           |
| 5       | DE                  | Driver enable input, this is an active high input                                                                                                                            |
| 6       | D                   | Driver transmit data input                                                                                                                                                   |
| 7       | NC                  | Not Connected                                                                                                                                                                |
| 8       | GND <sub>1</sub>    | Ground 1, the ground reference for Isolator Side 1                                                                                                                           |
| 9       | GND <sub>2</sub>    | Ground 2, the ground reference for Isolator Side 2.                                                                                                                          |
| 10      | SEL                 | VISO output voltage select, VISO=5V when SEL short to VISO, VISO=3.3V when SEL short to GND <sub>2</sub> or floating.                                                        |
| 11      | NC                  | Not Connected                                                                                                                                                                |
| 12      | A                   | Non-inverting Driver Output/Receiver Input. When the driver is disabled, or when VDD is powered down, Pin Y is put into a high impedance state to avoid overloading the bus. |
| 13      | B                   | Inverting Driver Output/Receiver Input. When the driver is disabled, or when VDD is powered down, Pin Z is put into a high impedance state to avoid overloading the bus.     |
| 14      | NC                  | Not Connected                                                                                                                                                                |
| 15      | GND <sub>2</sub>    | Ground 2, the ground reference for Isolator Side 2.                                                                                                                          |
| 16      | V <sub>ISOOUT</sub> | Isolated Power Supply Output. It is recommended this pin have a 0.1 $\mu$ F and 10 $\mu$ F capacitor to GND <sub>2</sub> (Pin16).                                            |

## 2. Absolute Maximum Ratings

| Parameters                                      | Symbol               | Min  | Typ | Max             | Unit | Comments |
|-------------------------------------------------|----------------------|------|-----|-----------------|------|----------|
| Power Supply Voltage                            | $V_{DD}$             | -0.5 |     | 6               | V    |          |
| Side1 I/O logic level                           | $V_{DDL}$            | -0.5 |     | 6               | V    |          |
| Maximum Input Voltage                           | /RE, DE, D           | -0.4 |     | $V_{DDL}^1+0.4$ | V    |          |
| Driver Output/Receiver Input Voltage            | $V_A, V_B, V_Y, V_Z$ | -7   |     | 12              | V    |          |
| Differential input voltage, A with respect to B | $V_{ID}$             | -18  |     | 18              | V    |          |
| R output current                                | $I_O$                | -15  |     | 15              | mA   |          |
| Operating Temperature                           | $T_{OPR}$            | -40  |     | 125             | °C   |          |
| Storage Temperature                             | $T_{STG}$            | -40  |     | 150             | °C   |          |

<sup>1</sup>For NSIP93086H-DSWR,  $V_{DD}$  replaces  $V_{DDL}$ .

## 3. ESD Ratings

| Ratings                 |                                                   | Value | Unit |
|-------------------------|---------------------------------------------------|-------|------|
| Electrostatic discharge | Human body model (HBM), per AEC-Q100-002-RevD     | ± 8.0 | kV   |
|                         | Charged device model (CDM), per AEC-Q100-011-RevB | ± 2.0 | kV   |

## 4. Recommended Operating Conditions

| Parameters                                                 | Symbol    | Min                   | Typ   | Max                 | Unit |
|------------------------------------------------------------|-----------|-----------------------|-------|---------------------|------|
| NSIP93086C/H<br>Power Supply Voltage                       | $V_{DD}$  | 3                     | 3.3/5 | 5.25                | V    |
| NSIP93086C<br>Side1 I/O logic level                        | $V_{DDL}$ | 1.8                   |       | 5.25                | V    |

## 8. Function Description

NSIP93086 is a high reliability isolated full duplex RS-485 transceiver. Data isolation is achieved using Novosense integrated capacitive isolation that allows data transmission between the logic side and the Bus side. The 93086 series are safety certified by UL1577 supporting 5kV<sub>RMS</sub> insulation withstand voltage.

### 8.1. True Fail-Safe Receiver Inputs

The devices feature fail-safe circuitry, which guarantees a logic-high receiver output when the receiver inputs are open or shorted. The receiver threshold is fixed between -10mV and -200mV, which meets EIA/TIA-485 standard. If the differential input voltage ( $V_A - V_B$ ) is greater than or equal to -10mV, receiver output R is logic high. In the case of a terminated bus with all transmitters disabled, the differential input voltage is pulled to zero by the termination resistors. Due to the receiver threshold, the receiver output R is logic high.

### 8.2. Truth Tables

Table 7.1 Driver Function Table<sup>1</sup>

| VDD status | Input (D) | Enable Input (DE) | Outputs |   |
|------------|-----------|-------------------|---------|---|
|            |           |                   | Y       | Z |
| PU         | H         | H                 | H       | L |
| PU         | L         | H                 | L       | H |
| PU         | X         | L                 | Z       | Z |
| PU         | X         | OPEN              | Z       | Z |
| PU         | OPEN      | H                 | H       | L |
| PD         | X         | X                 | Z       | Z |

Table 7.2 Receiver Function Table<sup>1</sup>

| VDD status | Differential Input ( $V_A - V_B$ ) | Enable Input (/RE) | Output (R) |
|------------|------------------------------------|--------------------|------------|
| PU         | $\geq -10\text{mV}$                | L/Open             | H          |
| PU         | $\leq -200\text{mV}$               | L/Open             | L          |
| PU         | Open/Short                         | L/Open             | H          |

<sup>1</sup> PD= Powered down; PU= Powered up; H= Logic High; L= Logic Low; X= Irrelevant; Z= High Impedance;

### 8.3. EMI Considerations

NSIP93086 use a small on-chip transformer to provide power for RS485 Transceiver. The on-chip transformer operates at high frequency, which may degrade EMI performance, to achieve better EMI performance, special considerations must be taken during PCB layout. Please refer to the application note if needed.

### 8.4. Output Short and Over Temperature Protection

The NSIP93086 series are protected against output short for  $V_{ISOOUT}$ . When short on  $V_{ISOOUT}$  occurs, the device will be in Hiccup mode and the power transferred will be limit, which will limit the temperature of the device to protect the device.

The NSIP93086 series also protected against over temperature. When the chip is over 165°C, it will be shut down until the temperature of below 145°C.

Not Finalized & Confidential

## 9. Application Note

### 9.1. 256 Transceivers on the Bus

The devices have a 1/8-unit-load receiver input impedance ( $96k\Omega$ ) that allows up to 256 transceivers on the bus. Connect any combination of these devices, and/or other RS-485 devices, for a maximum of 32 unit-loads to the line.

### 9.2. ESD Protection

ESD protection structures are enhanced on all pins to protect against electrostatic discharge encountered during handling and assembly. The Bus pins have extra protection against static electricity to bus side ( $V_{ISOOUT}$  side).

ESD protection can be tested in various ways. Below is the ESD spec of the devices.

Bus pins:

- $\pm 8kV$  w.r.t to GND2 using the Contact Discharge method specified in IEC 61000-4-2

### 9.3. Layout Considerations

The NSIP93086 requires a  $10\mu F + 0.1\mu F$  bypass capacitor between  $VDD_1$  and  $GND_1$ ,  $10\mu F + 0.1\mu F$  bypass capacitor between  $V_{ISOOUT}$  and  $GND_2$ . The capacitor should be placed as close as possible to the package. To eliminate line reflections, each cable end (A-B, Y-Z) is terminated with a resistor, whose value matches the characteristic impedance of the cable ( $54\Omega / 120\Omega$ ). It's good practice to place the bus connectors and termination resistor as close as possible to the A and B, Y and Z pins.

## 14. Revision History

| Revision | Description     | Date      |
|----------|-----------------|-----------|
| 0.0      | Initial Version | 2025/3/16 |

Not Finalized & Confidential

## IMPORTANT NOTICE

The information given in this document shall in no event be regarded as any warranty or authorization of, express or implied, including but not limited to accuracy, completeness, merchantability, fitness for a particular purpose or infringement of any third party's intellectual property rights.

You are solely responsible for your use of Novosense' products and applications, and for the safety thereof. You shall comply with all laws, regulations and requirements related to Novosense's products and applications, although information or support related to any application may still be provided by Novosense.

The resources are intended only for skilled developers designing with Novosense' products. Novosense reserves the rights to make corrections, modifications, enhancements, improvements or other changes to the products and services provided. Novosense authorizes you to use these resources exclusively for the development of relevant applications designed to integrate Novosense's products. Using these resources for any other purpose, or any unauthorized reproduction or display of these resources is strictly prohibited. Novosense shall not be liable for any claims, damages, costs, losses or liabilities arising out of the use of these resources.

For further information on applications, products and technologies, please contact Novosense ([www.novosns.com](http://www.novosns.com) ).
