Sensor Communications Units

E3NW

EtherCAT

CompoNet

CC-Link V2

Easy

“Mounts Anywhere”

Wide Variety

Variouly-shaped, compact heads allow installation in any small space.

Suitable for Harsh Environments

Fiber Units are available for various installation conditions and can be installed as is, even in harsh environments.

“Achieve Easy Detection in Many Applications”

Smart Tuning

Just press the button to set the optimum incident level and threshold. Consistent settings are achieved for all users with this ultra-easy procedure.

Press the **TUNE** button
once with a workpiece and
once without a workpiece

Automatic Setting of Optimum Values

Threshold + Incident Level

5000 9999

Set to the intermediate value between the incident levels with and without a workpiece. Incident level adjustment with and without a workpiece.

Optimum Light Intensity Adjustment from Transparent Objects to Black Workpieces

The incident level is optimized to enable stable detection even for saturated or insufficient incident levels.

Light Intensity Adjustment Range of 40,000 Times

Excessive Incident Level
▶ Incident light reduced.

▶ Incident light increased.

“Smooth Wiring and Setting”

Reduced Wiring

Simply link the Fiber Amplifier Units together for easy wiring and checking.

Separate Installation

Use the Distributed Sensor Unit for distributed installation to reduce introduction costs and work.

Easy Setup

Commissioning time is reduced with batch setting from a Touch Panel or backup data for process switchovers.

Sensor

Minimal Cost Process.

Basic Features of Fiber Sensors

Ideal for narrow spaces or for detecting minute objects.

Digital display achieves visual control and quantitative control.

Conventional Photoelectric Sensor with Built-in Amplifier

Set the threshold by a sensitivity adjuster / Check the operation by an indicator.

- Ambiguous standard (e.g., 3/4 turn of adjuster)
- Indicator does not show the present value.

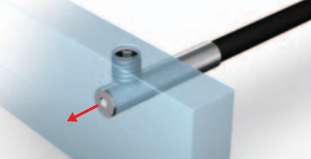

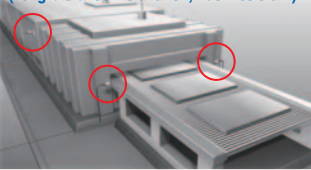

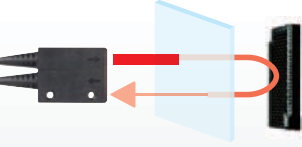

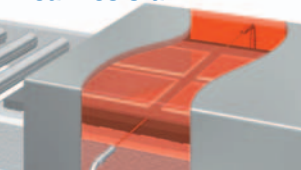

Fiber Sensor

Quantitative control over threshold settings with a digital display.

- The reference value can be set numerically for easier specification.
- Easily perceivable present value.

Fiber Unit Index

| Standard Installation | | Saving Space | |
|--|--|---|---|
| Threaded Models  Standard screw-type installation. The Fiber Units is mounted into a drilled hole and secured with nuts. 06 Page | Cylindrical Models  Ideal for installation in narrow spaces. The Fiber Unit is secured with a set screw. 10 Page | Flat Models  Mount directly in limited spaces without using special mounting brackets. 14 Page | Sleeve Models (Close-range Detection)  Suitable for close-range detection. Ideal for detecting minute objects in areas with limited space. 16 Page |
| Beam Improvements | | | |
| Small-Spot, Reflective (Minute Object Detection)  Small-spot to accurately detect small objects. 20 Page | High-power Beam (Long-distance Installation, Dust-resistant)  Suitable for detection on large equipment, of large objects, and in environments with airborne particles. 24 Page | Narrow View (Detection Across Clearance)  The Fiber Unit emit a non-spreading beam to prevent false detection of light reflected off surrounding objects. 30 Page | Detection without Background Interference  Detect only objects in the sensing range, and not in the background. 32 Page |
| Transparent Object Detection | | | |
| Retro-reflective  Detect transparent objects reliably because the beam passes through the object twice, resulting in greater light interruption. 34 Page | Limited-reflective (Glass Detection)  The limited-reflective optical system provides stable detection of specular reflective glass. 36 Page | | |
| Environmental Immunity | | | |
| Chemical-resistant, Oil-resistant  Made from materials that are resistant to various oils and chemicals. 38 Page | Bending-resistant, Disconnection-resistant  Resistant to repeated bending on moving parts and breaking from snagging or shock. 40 Page | Heat-resistant  Can be used in high-temperature environments at up to 400°C. 44 Page | |
| Special Applications | | | |
| Area Beam (Area Detection)  Detect across areas for meandering materials or falling workpieces whose position vary. 48 Page | Liquid-level Detection  Detect only liquid when being mounted on tubes or in liquid. 50 Page | Vacuum-resistant  Can be used under high vacuums of up to 10 ⁻⁵ Pa. 52 Page | FPD, Semiconductors, and Solar Cells  Designed specifically to reliably detect glass substrates and wafers. 54 Page |

* The optical fiber is 2 m long on each side, so the sensing distance is 4,000 mm.

Note 1. The following mode names and response times apply to the modes given in the Sensing distance column.

[E3X-HD] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 µs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (NPN output: 50 µs, PNP output: 55 µs)
[E3NX-FA] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 µs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (30 µs)

2. The values for the minimum sensing object are reference values that indicate values obtained in standard mode with the sensing distance and sensitivity set to the optimum values.

The first value is for the E3X-HD and the second value is for the E3NX-FA.

3. The sensing distances for E3NX-FA are values for E3NX-FA□ models. The distances for E3NX-FAH□ infrared models are different.

(07-C) E32-LT11 2M (Free Cutting)

E32-LT11R 2M (Free Cutting)

- Reference Information for Model Selection -

Features of the Right-angle Type

- Cable is less prone to snagging.
- Cable runs along the mounting surface for less space compared with Top-view Fiber Units.
- The nut is attached to the Fiber Unit to reduce installation work.

What Is "Flexible" Fiber?

The flexible fiber has a small bending radius for easy routing without easily breaking. It is easy to use because the cable can be bent without significantly reducing light intensity.

Structure which has a cladding around a large number of ultrafine cores.

And

Long-distance Sensing Applications

A separate Lens Unit can be attached to extend the sensing distance.

→ 26 Page

Breaking Due to Snagging or Shock

The Fiber Unit can be protected from breaking with stainless steel spiral tube.

→ 40 Page (Excluding the E32-T11N 2M.)

Build-in Lens

What Are Fiber Units with Build-in Lenses?

These Fiber Units have built-in lenses. They feature high-power beams. You don't have to worry about the lens falling off and getting lost.

- Reference Information for Model Selection -

Features of Coaxial Reflective Type

These Fiber Units offer better detection of small objects at close distances (of 2 mm or less) than Standard Reflective Fiber Units. They also detect glossy surfaces more reliably than Standard Reflective Fiber Units, even if the surface is tilted. The receiver fibers are arranged around the emitter fiber as shown below.

Features of the Right-angle Type

- Cable is less prone to snagging.
- Cable runs along the mounting surface for less space compared with Top-view Fiber Units.
- The nut is attached to the Fiber Unit to reduce installation work.

What Is "Flexible" Fiber?

The flexible fiber has a small bending radius for easy routing without easily breaking. It is easy to use because the cable can be bent without significantly reducing light intensity.

Note 1. The following mode names and response times apply to the modes given in the Sensing distance column.

[E3X-HD] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (NPN output: 50 μs, PNP output: 55 μs)

[E3NX-FA] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (30 μs)

2. The values for the minimum sensing object are reference values that indicate values obtained in standard mode with the sensing distance and sensitivity set to the optimum values. The first value is for the E3X-HD and the second value is for the E3NX-FA.

3. The sensing distances for E3NX-FA are values for E3NX-FA□ models. The distances for E3NX-FAH□ infrared models are different.

- Small-spot is ideal for detecting minute objects. Select the Fiber Unit that is best suited for the workpiece size and installation distance. (Refer to Reference Information for Model Selection)
- Available with a variable-spot Lens Unit to change the spot diameter without replacing the fiber. The spot diameter can be adjusted according to the size of the workpiece by changing the withdrew length and sensing distance. Refer to the following graph, which shows the relation between the withdrew length, focal distance, and spot diameter.

* Withdrew length: Approx. 1.3 to 5.8 mm

Specifications

Reflective Fiber Units

Variable-spot types

Lens Units + Fiber Unit

| Type | Spot diameter | Center distance (mm) | Lens Units | Lens Units + Fiber Units | Fiber Unit | | 21 Page Dimensions No. |
|---------------|-----------------|----------------------|----------------|--------------------------|-------------------------|-------------------|------------------------|

Technical Guide and Precautions

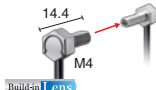

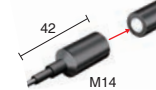

Model Index

- Maximum sensing distance without attaching a Lens: 20 m (E32-T17L)
Suitable for detection of large objects and for use in large-scale installations.
- Powerful enough to resist the influences of dust and dirt.
(Refer to the comparisons of incident level on the Reference Information for Model Selection.)
- In addition to the products listed on this page, Lenses are available to extend the sensing distance. (→ 26 to 29 pages)

* The optical fiber is 2 m long on each side, so the sensing distance is 4,000 mm.

Note 1. The following mode names and response times apply to the modes given in the Sensing distance column.

[E3X-HD] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (NPN output: 50 μs, PNP output: 55 μs)

[E3NX-FA] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (30 μs)

2. The values for the minimum sensing object are reference values that indicate values obtained in standard mode with the sensing distance and sensitivity set to the optimum values. The first value is for the E3X-HD and the second value is for the E3NX-FA.

3. The sensing distances for the E3NX-FA are values for E3NX-FA□ devices. The distance for E3NX-FAH□ infrared models varies.

Aperture angle and Optical Axis Diameter

The Aperture angle is the output angle of the emitted beam, and the optical axis diameter is the core diameter of the emitter fiber. A fiber with a narrow view has a larger optical axis diameter than standard fibers, but the aperture angle is smaller so it is not influenced by surrounding objects.

Sensing Distance vs. Digital Value

The following graphs show how the digital value is high within the sensing range and small outside. This explains why false detection does not occur outside the sensing range, even against common metal backgrounds, such as stainless steel.

- Retro-reflective Fiber Units are ideal for detecting transparent objects. The light beam passes through the object twice, this model interrupts light more than Through-beam model.

- Excellent detection performance with transparent films. (E32-LR11NP + E39-RP1)
The specially designed filter eliminates undesirable light, which allows significantly more light to be interrupted for stable detection of films.

* This effect may not be as strong for some films. Check suitability beforehand.

Note 1. Objects with a high reflection factor may cause the Fiber Sensor to detect reflected light as incident light. Also, stable detection may not be possible for transparent objects. Check suitability beforehand.

2. The following mode names and response times apply to the modes given in the Sensing distance column.

[E3X-HD] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (NPN output: 50 μs, PNP output: 55 μs)

[E3NX-FA] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (30 μs)

3. The values for the minimum sensing object are reference values that indicate values obtained in standard mode with the sensing distance and sensitivity set to the optimum values. The first value is for the E3X-HD and the second value is for the E3NX-FA.

4. The sensing distances for the E3NX-FA are values for E3NX-FA□ devices. The distance for E3NX-FAH□ infrared models varies.

Performance Comparison of Transparent Object Detection

For detecting transparent objects, consider using following products together: E32-LR11NP 2M + E39-RP1.

- This configuration features a special built-in optical filter that ensures stable detection of double-refractive materials, such as films and PET bottles.
- The retro-reflective model is suitable for detecting glass.

- These Fiber Units are based on a limited-reflective optical system where the emitting light and receiving light axes intersect at the same angle. This allows for stable detection of glass because the Fiber Units receives the specular reflection of the glass when the glass is in the sensing range.

- Reference Information for Model Selection -

Sensing Distance vs. Digital Value

Limited-reflective Fiber Unit can keep high digital value within the sensing area for glass.

The digital value gets lower out of the sensing area for metals, including SUS (common as background).

— Glass, $t = 0.7$
— SUS304

* E3NX-FA21 used in high-speed (HS) mode.

*1 The optical fiber is 2 m long on each side, so the sensing distance is 4,000 mm.

*2 For continuous operation, use the Fiber Unit between -40 and 130°C.

*3 The IP68G is the degree of protection which is defined according to the JIS (Japanese Industrial Standards). The IP68 indicates the same level of protection as defined by the IEC, and the G indicates that a device has resistance to oil. Passed OMRON's Oil-resistant Component Evaluation Standards (OMRON's own durability evaluation standards) (Cutting oil type: specified in JIS K 2241:2000; Temperature: 35°C max.)

Note: The sensing distances for the E3NX-FA are values for E3NX-FA□ devices. The distance for E3NX-FAH□ infrared models varies.

- Capable of withstanding one million repeated bends.

Degree of bend: $\pm 180^\circ$
 Bending radius: 4 mm
 Weight: 50 g
 Bending rate: 30 times/minute

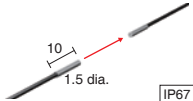

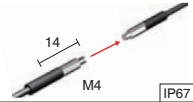

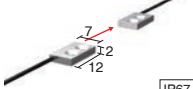

- A large number of independent fine fibers ensures good flexibility. Suitable for use on moving parts without easily breaking.

- Protective Stainless Spiral Tube is available for covering the fiber cable to protect it from accidental breaking due to snagging or shock.

*1 For continuous operation, use the Fiber Unit between -40 to 90°C.

*2 For continuous operation, use the Fiber Unit between -40 to 130°C.

*3 The heat-resistant rating is not the same for all parts of the Fiber Unit. Refer to the dimensions diagrams for details.

*4 The ambient operating temperature for the E32-T61-S 2M is -60 to 350°C.

*5 The optical fiber is 2 m long on each side, so the sensing distance is 4,000 mm.

Note 1. The following mode names and response times apply to the modes given in the Sensing distance column.

[E3X-HD] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 µs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (NPN output: 50 µs, PNP output: 55 µs)

[E3NX-FA] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 µs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (30 µs)

2. The values for the minimum sensing object are reference values that indicate values obtained in standard mode with the sensing distance and sensitivity set to the optimum values. The first value is for the E3X-HD and the second value is for the E3NX-FA.

3. The sensing distances for the E3NX-FA are values for E3NX-FA□ devices. The distance for E3NX-FAH□ infrared models varies.

Detection of falling workpieces

Meander detection

Detection of workpieces with holes

- Area beams are optimum for detecting workpieces presented in inconsistent positions, such as falling workpieces, or for meander detection, or for detecting workpieces with holes.

- This Fiber Unit is ideal for meander detectin because it outputs the digital value in a linear relation to the interrupted light distance.

Characteristics of Light Interruption (Reference Value)

Model Index

- Fiber Units for detecting liquid levels are available in two types: for tube mounting and liquid contact.

▶ Tube-mounting Types

Detect the liquid level inside transparent tubes. Strap the Fiber Unit to a tube with band.

▶ Liquid-contact Type

Detect the liquid level by direct contact with the liquid. This model has excellent chemical-resistance because the Fiber Unit is covered in fluororesin.

Specifications

| Detection scheme | Tube diameter | Features | Appearance (mm) | Bending radius of cable | Applicable range | Optical axis diameter (minimum sensing object) | Models | 51 Page Dimensions No. |
|---|-----------------------|---|-----------------|-------------------------|---|--|---------------------|------------------------|
| Tube-mounting | 3.2, 6.4 and 9.5 dia. | <ul style="list-style-type: none"> Resistant to bubbles and droplets Residual quantity detection | | Bend-resistant, R4 | Applicable tube: Transparent tube with a diameter of 3.2, 6.4, or 9.5 dia. and a recommended wall thickness of 1 mm | — | E32-A01 5M | 51-A |
| | 8 to 10 dia. | Ideal for mounting at multilevels | | R10 | Applicable tube: Transparent tube with a diameter of 8 to 10 dia. and a recommended wall thickness of 1 mm | — | E32-L25T 2M | 51-B |
| | No restrictions | <ul style="list-style-type: none"> Usable on large diameter tubes Resistant to bubbles and droplets | | R4 | Applicable tube: Transparent tube (no restrictions on diameter) | — | E32-D36T 2M | 51-C |
| Liquid contact (heat-resistant up to 200°C) | — | — | | R40 R25 *3 | Liquid-contact Type *1 | — | E32-D82F1 4M | 51-D |

*1 If you want to change the amount of received light, please Refer to the Instruction Sheet of the Fiber Amplifier used.

*2 The applicable range is the same whether an E3X-HD series or E3NX-FA series is used. This does not include E3NX-FAH□ infrared models varies.

When using a Fiber Amplifier Unit in giga-power mode, level detection may not work depending on the tube diameter. Make sure to confirm operation with the actual tube.

*3 The bending radius of the sensing section (except for the unbendable section) is 40 mm, and the bending radius of the fiber is 25 mm.

- Reference Information for Model Selection -

Determining the Best Model for Tube-mounted Types

| Mounting and conditions | Recommended Unit | Features |
|---|------------------|---|
| When bubbles and the water droplets are generated | E32-A01 | <p>This is a Through-beam Model, so the incident light will differ greatly between with and without of liquid. It also uses an area beam, which is less prone to false detection by bubbles and droplets.</p> <div> <div> <p>With liquid</p> <p>Light interrupted</p> </div> <div> <p>Without liquid</p> <p>Light incident</p> </div> </div> |
| Multilevel installation in limited space | E32-L25T | <p>This model is suitable for mounting at multilevels because of the thin type (height: 10 mm).</p> |
| Mounting on large diameter tubes | E32-D36T | <p>This model has no restrictions on the tube diameter, so it can be mounted on many different tube sizes. It also uses an area beam, which is less prone to false detection by bubbles and droplets.</p> <div> <div> <p>With liquid</p> <p>Air</p> <p>Tube</p> <p>Reflective= Light incident</p> </div> <div> <p>Without liquid</p> <p>Liquid</p> <p>Radiation</p> </div> </div> |

* The 2-m section of optical fiber on the Amplifier unit side is plastic and therefore allows free cutting.

Note: The maximum allowable temperature is 200°C for section A and 85°C for section B.

Tube-mounting Examples

And

Designed for Safe Residual quantity detection (E32-A01 only)

The E32-A01 Fiber Unit is designed to default to the same output as for liquid absent in the event of a failure, such as when the fiber breaks. This makes it suitable for residual quantity detection.

| | |
|-------------------------|-------------------|
| Trouble (disconnection) | Light interrupted |
| With liquid | Light interrupted |
| Without liquid | Light incident |

If the failure goes unnoticed, this failsafe design will prevent false detection of liquid when there is no liquid present.

Note 3. The maximum tightening torque is 14.7 N·m for the clamp nut and 1.5 N·m for the connector.
Note 4. A V15 O-ring, nut, spring washer, two connectors, and four O-rings for the fibers are provided.

- Reference Information for Model Selection -

What Is a Vacuum-resistant Fiber Unit?

- The Flange is designed to create an air-tight seal on the vacuum side.
 - The fibers and Flange on the vacuum side are made of non-outgassing materials.
- These parts are inspected, cleaned, and sealed in an air-tight package in a clean room prior to shipment.

Technical Guide and Precautions

Model Index

Glass-substrate
Alignment

Glass-substrate Alignment

- Detection position accuracy: 0.2 mm max.
No variation in detection positions even if the sensing distance changes.
- Tilting workpiece does not affect detection.

Glass-substrate Mapping

Stable detection is possible even for difficult-to-detect curved surfaces.

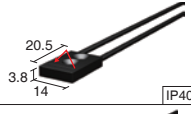

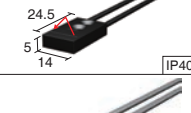

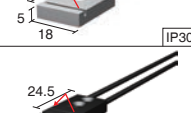

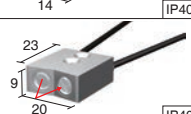

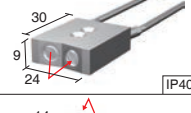

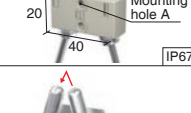

Glass Presence Detection in Wet Processes

- Stable non-contact detection even with warped glass.
- The spherical heads ensure stable detection without being influenced by liquid.

^{*1} If operation is affected by the background, perform power tuning to decrease the incident light level.

^{*2} The maximum allowable temperature is not the same for all parts of the Fiber Unit. Refer to the dimensions diagrams for details. Must not be repeatedly subject to rapid temperature changes.

Note 1. The following mode names and response times apply to the modes given in the Sensing distance column.

[E3X-HD] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (NPN output: 50 μs, PNP output: 55 μs)

[E3NX-FA] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (30 μs)

2. The sensing distances for the E3NX-FA are values for E3NX-FA□ devices. The distance for E3NX-FAH□ infrared models varies.

Wafer Mapping

• Wafer Mapping

- ▶ Thin-profile design enables easy mounting on robot arms.
- ▶ Easy to adjust optical axis.
(Typical alignment error between mechanical and optical axes is only $\pm 0.1^\circ$.)
- ▶ Reliably wafer detection, even when stacked closely together.

Specifications

Through-beam Fiber Units

| Application | Ambient temperature | Aperture angle | Appearance (mm) | Bending radius of cable | Sensing distance (mm) | | | | Optical axis diameter (minimum sensing object) | Models | 57 Page Dimensions No. |

| | | | 1,740 | SHS: 700 | 2,610 | SHS: 700 | | | | | |

* The optical fiber is 2 m long on each side, so the sensing distance is 4,000 mm.

Note 1. The following mode names and response times apply to the modes given in the Sensing distance column.

[E3X-HD] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μ s), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (NPN output: 50 μ s, PNP output: 55 μ s)

[E3NX-FA] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μ s), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (30 μ s)

2. The values for the minimum sensing object are reference values that indicate values obtained in standard mode with the sensing distance and sensitivity set to the optimum values.

The first value is for the E3X-HD and the second value is for the E3NX-FA.

3. The sensing distances for the E3NX-FA are values for E3NX-FA□ devices. The distance for E3NX-FAH□ infrared models varies.

*1 Unbendable length of cable from fiber head.

Do not bend the cable for at least 20 mm from where the cable inserts into the Fiber Amplifier Unit.

*2 The heat-resistant rating is not the same for all parts of all parts of the Fiber Unit. Refer to the dimensions diagrams for details.

*3 Avoid rapid temperature changes.

*4 For embedded mounting, prepare a hole with a diameter of 2.6 mm.

*1 Unbendable length of cable from fiber head.

Do not bend the cable for at least 20 mm from where the cable inserts into the Fiber Amplifier Unit.

*2 For embedded mounting, prepare a hole with a diameter of 2.6 mm.

*3 For continuous operation, use the Fiber Unit between −40 to 130°C.

*4 For continuous operation, use the Fiber Unit between −40 to 90°C.

*5 The heat-resistant rating is not the same for all parts of the Fiber Unit. Refer to the dimensions diagrams for details.

*6 The bending radius of the protective cover (PVC, 25 mm) is 10 mm min.

Smart Fiber Amplifier Units

E3NX-FA Series **NEW**

A Smart Fiber Amplifier Unit with Ultra-stable Detection and Ultra-easy Setup

Expanded Application Response Capabilities Advanced Basic Performance

Improvements in the sensing distance and minimum sensing object have increased the range of application for stable detection.

1.5 Times the Sensing Distance*

6 m

For E32-LT11 Fiber Unit with a fiber length of 3.5 m

1/10th the Minimum Sensing Object*

0.3 μm dia.

Typical example of actual measurements with E32-D11R Fiber Unit.

*Compared to E3X-HD.

Achieve Easy Detection in Many Applications Advanced Smart Tuning

Just press the **E-TUNE** button once with a workpiece and once without a workpiece to automatically set the optimum incident level and threshold. Consistent settings are achieved for all users with this ultra-easy procedure.

Automatic Setting of Optimum Values

Threshold + Incident Level

5000 9999

Set to the intermediate value between the incident levels with and without a workpiece.

Incident level adjustment with and without a workpiece

Optimum Light Intensity Adjustment from Transparent Objects to Black Workpieces

The incident level is optimized to enable stable detection even for saturated or insufficient incident levels.

Sensor Communications Units for E3NX-FA

E3NW Series **NEW**

The Next-generation E3NW Sensor Network Units Revolutionize On-site Sensing

The Sensor Communications Unit with a master function and the Distributed Sensor Units with slave functions enable N-Smart Sensors communication over open networks.

EtherCAT®

CompoNet

CC-Link V2

Greatly Reduced Machine Manufacturing Costs

There is no need to change the current distributed installation to introduce a network without increasing costs.

Greatly Reduced Machine Commissioning Time

All of the settings can be made at the same time from a Touch Panel.

Greatly Improved Machine Productivity

Realtime monitoring lets you perform maintenance before malfunctions occur.

*1. This type can prevent mutual interference for two units in the SHS2 mode.

*2. A Sensor Communications Unit is required if you want to use the Fiber Amplifier Unit on a network.

Note. The sensing distances for E3NX-FA in this catalog are values for E3NX-FA□ models. The distances for E3NX-FAH□ infrared models are different.

Sensor Communications Unit

Sensor Communications Unit

| Communication method | Appearance | Applicable Fiber Amplifier Model | Model | Ratings and Specifications | Dimensions |
|----------------------|---|---|--------------------|----------------------------|-------------------|
| EtherCAT |  | E3NX-FA0 E3NX-FA10 E3NX-FA40 E3NX-FAH0 | E3NW-ECT | Page 78 | Page 79 (79-A) |
| CompoNet |  | | E3NW-CRT *2 | *1 | *1 |
| CC-Link |  | | E3NW-CCL | | |

*1. For details, refer to your OMRON website.

*2. E3NX-FAH0 can not be connected.

Distributed Sensor Unit

| Appearance | Applicable Fiber Amplifier Model | Model | Ratings and Specifications | Dimensions |
|---|----------------------------------|----------------|----------------------------|------------------------|
|  | E3NX-FA0 | E3NW-DS | Page 78 | Page 79 79-B |

Note: The Distributed Sensor Unit can be connected to any of the Sensor Communications Units.

Use the following DS-Bus communication cable (recommended) when connecting a sensor communications unit and a distributed sensor unit.

| Item | Manufacturer | Model |
|---------------------|------------------------|--------------------|
| Communication cable | BANDO DENSEN Co., Ltd. | ESVC 0.5X2C, black |

Connector cover for Sensor Communications Unit and Distributed Sensor Unit (provided)

Order a Cover when required, e.g., if you lose the covers.

| Model |
|----------------|
| E39-G27 |

Accessories (sold separately)

Wire-saving connectors (Required for models for Wire-saving Connectors.)

Connectors are not provided with the Fiber Amplifier Unit and must be ordered separately. * Protective stickers: provided.

| Type | Appearance | Cable length | Number of conductors | Applicable Fiber Amplifier Units | Models | Ratings, Specifications and Dimensions |
|------------------|---|--------------|----------------------|--|-----------------|--|
| Master Connector |  | 2 m | 4 | E3NX-FA7 E3NX-FA7TW E3NX-FA9 E3NX-FA9TW | E3X-CN21 | Page 90 90-A |
| Slave Connector |  | | 2 | | E3X-CN22 | Page 90 90-B |
| Master Connector |  | | 3 | E3NX-FA6 E3NX-FA8 E3NX-FAH6 E3NX-FAH8 | E3X-CN11 | Page 90 90-A |
| Slave Connector |  | | 1 | | E3X-CN12 | Page 90 90-B |

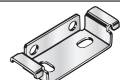

Sensor I/O Connectors (Required for models with M8 Connectors.)

Connectors are not provided with the Fiber Amplifier Unit and must be ordered separately. * Protective stickers: provided.

| Appearance | Cable length | Number of conductors | Models | Ratings and Specifications | Dimensions |
|---|--------------|----------------------|------------------------|----------------------------|------------------------|
|  | 2 m | 4 | XS3F-M421-402-A | Page 90 | Page 90 90-C |

Mounting Bracket

A Mounting Bracket is not provided with the Fiber Amplifier Unit and must be ordered separately as required.

| Appearance | Model | Quantity | Dimensions |
|---|-----------------|----------|------------------------|
|  | E39-L143 | 1 | Page 91 91-A |

DIN Track

A Din Track is not provided with the Fiber Amplifier Unit and must be ordered separately as required.

| Appearance | Type | Models | Quantity | Dimensions |
|---|-----------------------------------|------------------|----------|------------------------|
|  | Shallow type, total length: 1 m | PFP-100N | 1 | Page 91 91-B |
| | Shallow type, total length: 0.5 m | PFP-50N | | |
| | Deep type, total length: 1 m | PFP-100N2 | | Page 91 91-C |

End Plate

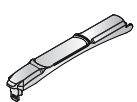

Two End Plates are provided with the Sensor Communications Unit.
End Plates are not provided with the Fiber Amplifier Unit and must be ordered separately as required.

| Appearance | Model | Quantity | Dimensions |
|---|--------------|----------|------------------------|
|  | PFP-M | 1 | Page 91 91-D |

Cover

Attach these Covers to Amplifier Units.

Order a Cover when required, e.g., if you lose the covers.

(Residual voltage: At load current of less than 10 mA: 1 V max., At load current of 10 to 100 mA: 2 V max.) OFF current: 0.1 mA max. | | | | | | | | | | |
| External inputs | | --- | | | Refer to *3. | | --- | Refer to *3. | | --- | | |
| Indicators | | 7-segment displays (Sub digital display: green, Main digital display: white) Display direction: Switchable between normal and reversed. OUT indicator (orange), L/D indicator (orange), ST indicator (blue), DPC indicator (green), and OUT selection indicator (orange, only on models with 2 outputs) | | | | | | | | | | |
| Protection circuits | | Power supply reverse polarity protection, output short-circuit protection, and output reve rse polarity protection | | | | | | | | | | |
| Response time | Super-high-speed mode (SHS) | Operate or reset for model with 1 output: 30 μs (Super High Speed mode (SHS2) of E3NX-FA11-5 is 60 ms each), with 2 outputs: 32 μs | | | | | | | | | | |
| | High-speed mode (HS) | Operate or reset: 250 ms | | | | | | | | | | |
| | Standard mode (Std) | Operate or reset: 1 ms | | | | | | | | | | |
| | Giga-power mode (GIGA) | Operate or reset: 16 ms | | | | | | | | | | |
| Sensitivity adjustment | | Smart Tuning (2-point tuning, full auto tuning, position tuning, maximum sensitivity tuning, power tuning, or percentage tuning (-99% to 99%)) or manual adjustment | | | | | | | | | | |
| Maximum connectable Units | | 30 | | | | | | | | | | |
| No. of Units for mutual interference prevention *4 | Super-high-speed mode (SHS) | 0 Note: 2 units when the detection mode is set to Super High Speed mode (SHS2), and for other models, the mutual interference prevention function is disabled. | | | | | | | | | | |
| | High-speed mode (HS) | 10 | | | | | | | | | | |
| | Standard mode (Std) | 10 | | | | | | | | | | |
| | Giga-power mode (GIGA) | 10 | | | | | | | | | | |

*1. This type can prevent mutual interference for two units in the SHS2 mode.

*2. At Power supply voltage of 10 to 30 VDC

Standard Models:

Normal mode : 990 mW max. (Current consumption: 33 mA max. at 30 VDC, 65 mA max. at 10 VDC)

Eco function ON: 780 mW max. (Current consumption: 26 mA max. at 30 VDC, 42 mA max. at 10 VDC)

Eco function LO: 840 mW max. (Current consumption: 28 mA max. at 30 VDC, 45 mA max. at 10 VDC)

Advanced Models:

Normal mode : 1,020 mW max. (Current consumption: 34 mA max. at 30 VDC, 67 mA max. at 10 VDC)

Eco function ON: 810 mW max. (Current consumption: 27 mA max. at 30 VDC, 44 mA max. at 10 VDC)

Eco function LO: 870 mW max. (Current consumption: 29 mA max. at 30 VDC, 48 mA max. at 10 VDC)

Infrared models:

Normal mode : 1,260 mW max. (Current consumption: 42 mA max. at 30 VDC, 80 mA max. at 10 VDC)

Eco function ON: 1,050 mW max. (Current consumption: 35 mA max. at 30 VDC, 60 mA max. at 10 VDC)

Eco function LO: 1,140 mW max. (Current consumption: 38 mA max. at 30 VDC, 70 mA max. at 10 VDC)

*3. The following details apply to the input.

| | Contact input (relay or switch) | Non-contact input (transistor) | Input time *3-1 |
|-----|---|--|----------------------------------|
| NPN | ON: Shorted to 0 V (Sourcing current: 1 mA max.). OFF: Open or shorted to Vcc. | ON: 1.5 V max. (Sourcing current: 1 mA max.) OFF: Vcc - 1.5 V to Vcc (Leakage current: 0.1 mA max.) | ON: 9 ms min. OFF: 20 ms min. |
| PNP | ON: Shorted to Vcc (Sinking current: 3 mA max.). OFF: Open or shorted to 0 V. | ON: Vcc - 1.5 V to Vcc (Sinking current: 3 mA max.) OFF: 1.5 V max. (Leakage current: 0.1 mA max.) | |

*3-1. Input time is 25 ms (ON)/(OFF) only when (in tUnE) or (in PiUn) input is selected.

*4. The tuning will not change the number of units. The least unit count among the mutual interference prevention units of E3NX and E3NC.
Check the mutual interference prevention unit count and response speed of each model.

| Item | Type | Standard models | | | Advanced models | | | | | Infrared models | |

FA10/FA40/FA0/FAH0

* Only OUT1 turns ON for output.

Operating Procedures

Basic Settings

Output switching

1. Press button.

Through-beam:

Set to "Dark ON" to turn the output ON with a workpiece in the detection area. [L/D Indicator] turns **D** ON.

Reflective:

Set to "Light ON" to turn the output ON with a workpiece in the detection area. [L/D Indicator] turns **L** ON.

Smart Tuning [Easy Sensitivity Setting]

(1) Detect for Workpiece Presence/Absence

- 2-point Tuning

1. Press button with a workpiece in the detection area.

2. Press button again without a workpiece in the detection area. Release the button when **[2Pnt]** is displayed.

➔ Setting is Completed

Incident light level setting:
The larger incident level of the Step 1 and 2 values is adjusted to the power tuning level.
Threshold setting:
Set to the middle between the Step 1 and 2 incident light levels.

Step 1 and Step 2 can be reversed.

(2) Enhance Durability of the Fiber Head against Dust and Dirt

- Maximum Sensitivity Tuning

1. Hold button for 3 seconds or longer with/without workpiece as shown below. Release the button when **[FULL]** is displayed.

➔ Setting is Completed

Incident light level setting:
The incident level in Step 1 is adjusted to "0".
Threshold setting:
The value is set to approx. 7% of the incident light level of 1.

However, the Sensor becomes more susceptible to the influence of background objects.

(3) Adjust for Moving Workpiece without Stopping Line

- Full Auto Tuning

1. Hold the button without the presence of a workpiece, and pass the workpiece through while **[IPnt]→[FULL]→[Auto]** is displayed in green digital.

(Keep holding the button while the workpiece passes through, and hold 7 seconds or longer until **[Auto]** is displayed in green digital. After the workpiece passes through, release your finger from the button.)

➔ Setting is Completed

Incident light level setting: Adjust the max. incident light level on Step 1 as the power tuning level.
Threshold setting: Set to the middle between max. and min. incident light levels on Step 1.

Basic Settings

(4) Determine Workpiece Position

● Position Tuning

1. Turn ON power tuning in SET mode. 

2. Press  button without a workpiece in the area.

3. Place the workpiece at the desired position and hold  button.

The green digital display changes [Pnt 9999] → [Pos].

➡ **Setting is Completed**

Incident light level setting: The Step 3 incident level is adjusted to half the power tuning level.
Threshold setting: Set to the same value as the Step 3 incident level.

(5) Detect Transparent or Small Workpiece (Set Threshold by incident light level percentage)

● Percentage Tuning

1. Turn ON Percentage Tuning in SET mode.

2. Press  button without a workpiece in the area. 

➡ **Setting is Completed**

Incident light level setting:
The Step 2 incident light level is adjusted to the power tuning level.
Threshold setting:
Set to the value obtained by [Incident Level at Step 2 × (1 + Percentage Tuning Level)].

 No Smart Tuning other than Power Tuning can be used if Percentage Tuning is set.

(6) Restore from the Incident Level Changed due to Dust and Dirt

● Power Tuning

1. Hold  and  buttons for 1 second or longer without a workpiece in the area.

➡ **Setting is Completed**

Incident light level setting: The Step 1 incident level is adjusted to the power tuning level.
Threshold setting: Not changed.

 Perform the procedure with a workpiece in the area for reflective model setting.
If the setting is made after position tuning, set both the through-beam model and reflective model with a workpiece.

 Refer to "Smart Tuning Error" for error displays.

● Smart Tuning Error

| Error / Display / Cause | Error Origin Tuning Type | Remedy |
|---|---|---|
| Near Error  | 2-point Tuning Full Auto Tuning | <ul style="list-style-type: none"> • Change the detection function mode to a slower response time mode. • Reduce the distance between the emitter and receiver. (Through-beam) • Place the Fiber Head closer to the sensing object. (Reflective) |
| Over Error  | All | <ul style="list-style-type: none"> • Use a thin-diameter fiber. • Widen the emitter and receiver distance. (Through-beam) • Distance the Fiber Head from the sensing object. (Reflective) |
| Incident light level is too high. | | |
| Low Error  | Tuning other than Maximum Sensitivity Tuning | <ul style="list-style-type: none"> • Reduce the distance between the emitter and receiver. (Through-beam) • Place the Fiber Head closer to the sensing object. (Reflective) |
| Incident light level is too low. | | |

 Refer to "Detailed Settings" to change the power tuning level.

Channel switching

(Models with 2 Outputs: E3NX-FA21, E3NX-FA51, E3NX-FA7TW, E3NX-FA9TW) and E3NX-FA54TW

■ The OUT selection indicators and the settings will change.

1. Press  button for 1 second.
2. The OUT selection indicators (OUT1/OUT2) switch.

[Output 1]

[Output 2]

 In the detailed settings, the OUT selection indicators will each light whenever the output (OUT1/OUT2) is set.

Minute Adjustment of Threshold Level

1. Press  button to adjust the threshold level.

The threshold level becomes higher. The threshold level becomes lower.

 Hold the key for high-speed level adjustment.

Convenient Setting Features

(1) Stable Detection Regardless of Incident Level Change due to Dust and Dirt

- DPC Function (Use of the function with Through-beam model or Retro-reflective model is recommended)

1. Perform Smart Tuning.

 Refer to "Smart Tuning"
Refer to "Power Tuning"

2. Set the DPC function ON in SET mode.

 Refer to "Detailed Settings".

(2) Reset Settings

- Setting Reset

Initializes all the settings by returning them to the factory defaults.

1. Hold  button and then hold  button for 3 seconds or longer.

2. Select [] in  and press  button.

3. Select [] in  and press  button.

(3) Save or Read Settings

1. Hold  button and then hold  button for 3 seconds or longer.

- User Save Function

Saves the current settings.

2. Select [] in  and press  button.

3. Select [] in  and press  button.

- User Reset Function

Reads out the saved settings.

2. Select [] in  and press  button.

3. Select [] in  and press  button.

(4) Prevent Mistake-operation

- Key Lock Function

Disables all button operations. [] is displayed when the button is pressed.

- Enable/Cancel
(This procedure)

* Press either of UP/DOWN.

Convenient Setting Features

(5) Reset Incident Light Level to "0"

Zero Reset Function

Changes the incident light level to "0".
The threshold level is also shifted accordingly.
The lower limit of the threshold is -1,999.

Enable

Cancel

(6) Producing an Output When the Incident Level Is within an Area

Area Detection Mode

- Select [SET Mode] - [OUT1 Mode] - [Area Detection Mode]. Press button for at least 3 seconds to leave the SET mode.

- Press button in [Detection Mode] to display OUT1 HIGH and OUT 1 LOW. "HIGH" and "LOW" will appear on the green digital display.

- Press button for the high and low thresholds to execute smart tuning.

Percentage Tuning: The thresholds are set as follows:
High: Incident level from step 3 + Incident level from step 3 × Percentage tuning level
Low: Incident level from step 3 - Incident level from step 3 × Percentage tuning level

(7) Monitoring the Incident Level for Sensing Objects Passing at High Speed

Change Finder

- Select [SET Mode] → [Digital Display] to set [].

The maximum value and minimum value are displayed with Light-ON and Dark-ON respectively.

- Press button for 3 seconds or longer to leave the SET mode.

- Send a workpiece past the Fiber Unit.

- The maximum and minimum incident levels will be displayed for 0.5 seconds when the workpiece passes.

(8) Determining If the Workpiece Can Be Detected

Solution Viewer

- Press button and button together for 3 seconds or longer to set [].

To clear the setting, press button and button together for 3 seconds

or longer to set [].

- Send a workpiece past the Fiber Unit.

- Displaying the Passing Time and Difference in Incident Levels.

- Press button and button together for 3 seconds or longer to leave SET mode.

Detailed Settings

Hold button for 3 seconds or longer to enter SET mode. The OUT selection indicators shows items for output 1 or output 2 individually for each output.

| Function Setting | Description |
|------------------|-------------|
|------------------|-------------|

1. Function Selection

2. Detection Function

3. DPC Function

4. Timer Function

5. Power Tuning Level

6. BANK Switching

Changing Functions to Set in SET mode

[]: Functions 1. to 5. can be set
[]: Functions 1. to 16. can be set.

Changing Light Level and Response Time

| Detection Function | Response Time | Light Level |
|--------------------------------|---------------|--------------|
| (a) HS High-speed mode | 250 μ s | 1 (Standard) |
| (b) STND Standard mode | 1ms | 1 time |
| (c) GIGA Giga mode | 16ms | 8 times |
| (d) SHS Super-high-speed mode* | 30 μ s | 0.25 times |

Smart Tuning is canceled if the detection mode is changed.

* The communication and mutual interference prevention functions are disabled when the detection mode is set to super-high-speed mode. The response time for models with 2 outputs is 32 μ s

The incident light level in SET mode is a reference value. It may be changed when switched to detection mode.

Stable Detection Regardless of Incident Light Level Change

Refer to "Convenient Setting Features"

Setting Output Timer

(Settings are displayed for both outputs for models with 2 outputs.)

| | |
|------------------------|-------------------------------------|
| (a) Off-delay Timer | Incident light No incident light |
| (b) On-delay Timer | Incident light No incident light |
| (c) One-shot Timer | Incident light No incident light |
| (d) ON/OFF-delay Timer | Incident light No incident light |

A timer value can be set after pressing button when a timer menu (other display than "----") is displayed.

Use button to set the time.

(1 to 9999 ms in 1 ms steps; the initial value: 10 ms)

Changing the Target Incident Light Level (Power Tuning Level)

Use button to set the power tuning level.

[100 to 9999 in 1 steps; the initial value: 9999]

Refer to "Convenient Setting Features"

Saving Settings in Each Bank

| Function Setting | Description |
|---|---|
| 7. Power Tuning ON/OFF Setting | Setting ON or OFF Incident Level Adjustment when Tuning |
| 8. Percentage Tuning | Detecting Transparent or Small Workpiece Press button in [P Tun] menu, then use button to set the percentage tuning level. (~99% to 99% in 1% steps; the initial value: ~10%) Refer to "Smart Tuning" |
| 9. Output 1 Mode | Changing the Output Mode for Output 1 |
| 10. Output 2 Mode | Changing the Output Mode for Output 2 Alarm Output Mode: Press button and then set the alarm output level with button. (0 to 100 P in 1-P increments, default: 50 P) Error Output Mode: An output is made when a DPC error, EEPROM error, or Load short circuit detection error occurs. |
| 11. External Input | Changing the Type of External Input The closed-circuit input time for tuning is the same as the key input time. |
| 12. Batch Tuning Settings | Tuning Multiple Amplifiers at Once When a setting other than OFF is selected, the percentage tuning setting is displayed continuously. When using the batch tuning function, set tuning for the external input (11). |

| Insulation resistance | 20 MΩ min. (at 500 VDC) | | |
| Dielectric strength | 500 VAC 50/60Hz 1 min | | |
| Mounting method | 35-mm DIN track-mounting | | |
| Weight (packed state/unit only) | Approx. 185 g/Approx. 95 g | | Approx. 160 g/Approx. 40 g |
| Materials | Polycarbonate | | |
| Accessories | Power supply connector,Communications connector for E3NW-DS, DIN Track End Plates (2) and Instruction manual | | Power supply/communications connector, DIN Track End Plates (2), Ferrite cores (2) and Instruction manual |

*1. The E3NX-CA0 is supported for firmware version 1.06 or higher (Sensor Communications Units manufactured in June 2016 or later).
*2. The E9NC-TA0 is supported for firmware version 1.03 or higher (Sensor Communications Units manufactured in July 2014 or later).
*3. Temperature Limitations Based on Number of Connected Amplifier Units:
Groups of 1 or 2 Amplifiers: 0 to 55°C, Groups of 3 to 10 Amplifiers: 0 to 50°C, Groups of 11 to 16 Amplifiers: 0 to 45°C, Groups of 17 to 30 Amplifiers: 0 to 40°C
*4. A maximum total of 30 Sensors can be connected to a Sensor Communications Unit and Distributed Sensor Units.

Communications Specifications

| Item | Specifications |
|-----------------------------|--|
| Protocol | EtherCAT |
| Modulation | Baseband |
| Baud rate | 100 Mbps |
| Physical layer | 100Base-TX (IEEE802.3u) |
| Topology | Daisy chain |
| Communications media | STP category 5 or higher |
| Communications distance | 100 m max. between nodes |
| Noise immunity | Compliant with IEC 61000-4-4, 1 kV min. |
| Node address setting method | Set the decimal rotary switches or software *1 |
| Node address range | 000 to 192 *2 |

*1. The software setting is used when the node address setting switches are set to 0.
*2. The range depend on the EtherCAT master that is used. Refer to the E3NW-ECT EtherCAT Sensor Communications Unit Operation Manual for details.

CompoNet-compatible and CC-Link-compatible products are also available. Refer to your OMRON website for details.

| | Cover | | Polycarbonate (PC) | | | |
| | Cable | | PVC | | | |
| Accessories | | | Instruction Manual | | | |

*1. The E3X-ECT EtherCAT Sensor Communications Unit and the E3X-CRT CompoNet Sensor Communications Unit can be used.

*2. Use either the E3X-CN11 (master connector, 3 conductors) or the E3X-CN12 (slave connector, 1 conductor).

*3. When connected to an OMRON NJ-series Controller.

*4. The communications function and mutual interference prevention function are disabled when the detection mode is set to Super-high-speed mode (SHS).

When including E3X-DA-S with activated power tuning the maximum number of mutual interference prevention is up to 6.

When including E3X-MDA with activated power tuning the maximum number of mutual interference prevention is up to 5.

Dimensions

Tolerance class IT16 applies to demmensions in this date sheet unless otherwise specified.

Pre-wired Amplifier Units

(82-A) E3X-HD11
E3X-HD41

With Mounting Bracket Attached

Note: When using E39-L143 Mounting Brackets, there will be small gaps between the Amplifier Units if they are mounted side by side.

Mounting Holes

Amplifier Units with Wire-saving Connectors

83-A E3X-HD6
E3X-HD8

DIN track mounting

With Mounting Bracket Attached

Note: When using E39-L143 Mounting Brackets, there will be small gaps between the Amplifier Units if they are mounted side by side.

Mounting Holes

* The cable diameters are as follows:

| | |
|-------------------------|----------|
| E3X-CN11 (3 conductors) | 4.0 dia. |
| E3X-CN12 (1 conductor) | 2.6 dia. |

Amplifier Units with M8 Connectors

83-B E3X-HD14
E3X-HD44

The dimensions are the same as the E3X-HD6/8, except for the connector.

Amplifier Unit with Connector for Sensor Communications Unit

83-C E3X-HD0

Nomenclature

[L/D Indicator]

Indicates the setting status:
Light-ON (L) or Dark-ON (D).

[DPC Indicator]

Turns ON when Dynamic Power Control
is effective.

[△L/D Button]

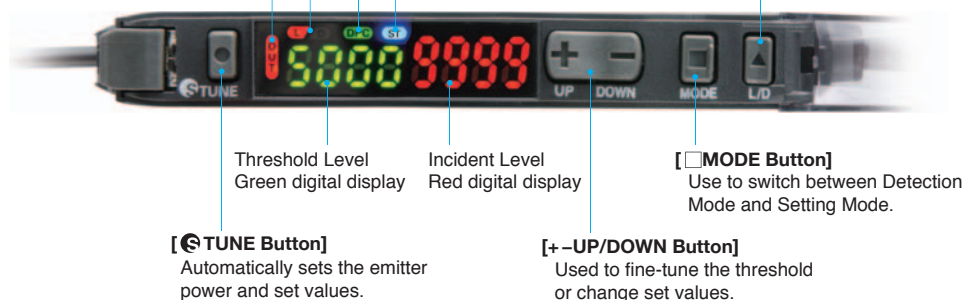

Use to switch between
Light-ON (L) and Dark-ON (D).

[OUT Indicator]

Turns ON when
the output is ON.

[ST Indicator]

Turns ON when Smart Tuning
is in progress.

Operating Procedures

Basic Settings

Output switching

1. Press  button.

Through-beam:

Set to "Dark ON" to turn the output ON with a workpiece in the detection area.
[L/D Indicator] turns **D** ON.

Reflective:

Set to "Light ON" to turn the output ON with a workpiece in the detection area.
[L/D Indicator] turns **L** ON.

Smart Tuning [Easy Sensitivity Setting]

(1) Detect for Workpiece Presence/Absence

• 2-point Tuning

1. Press  button with a workpiece in the detection area.

2. Press  button again without a workpiece in the detection area.

Incident light level setting:
The larger incident level of the Step 1 and 2 values is adjusted to the power tuning level.
Threshold setting: Set to the middle between the Step 1 and 2 incident light levels.

Step 1 and Step 2 can be reversed.

(2) Enhance Durability of the Fiber Head against Dust and Stain

• Maximum Sensitivity Tuning

1. Hold  button for 3 seconds or longer with/without workpiece as shown below.

Release the button when [**St FULL**] is displayed.

Through-beam: Workpiece is present

Reflective: Workpiece is absent

Incident light level setting:
The incident level in Step 1 is adjusted to "0".
Threshold setting:
The value is set to approx. 7% of the incident light level of 1.
If the incident light level of 1 is smaller during long distance detection, the minimum value by which an output is correctly turned ON will be set.

(3) Adjust for Moving Workpiece without Stopping Line

• Full Auto Tuning

1. Hold the  button without the presence of a workpiece, and pass the workpiece through while [**IPnt**] → [**FULL**] → [**AUTO**] is displayed in red digital. (Keep holding the  button while the workpiece passes through, and hold 7 seconds or longer until [**AUTO**] is displayed in red digital. After the workpiece passes through, release your finger from the  button.)

Incident light level setting:
Adjust the max. incident light level on Step 1 as the power tuning level.
Threshold setting:
Set to the middle between max. and min. incident light levels on Step 1.

(4) Determine Workpiece Position

• Position Tuning

1. Press  button without a workpiece in the area.

2. Place the workpiece at the desired position and hold  button.

The red digital display changes [**IPnt**] → [**P05**].

➔ **Setting is Completed**

Incident light level setting:

The Step 2 incident level is adjusted to half the power tuning level.
Threshold setting: Set to the same value as the Step 2 incident level.

(5) Detect Transparent or Small Workpiece (Set Threshold by incident light level percentage)

• Percentage Tuning

1. Turn ON Percentage Tuning in SET mode.

Refer to "Detailed Settings".

2. Press  button without a workpiece in the area.

Incident light level setting:

The Step 2 incident light level is adjusted to the power tuning level.
Threshold setting: Set to the value obtained by [Incident Level at Step 2 × Percentage Tuning Level + Incident Level at Step 2].

No Smart Tuning other than Power Tuning can be used if Percentage Tuning is set.

• Smart Tuning Error

| Error / Display / Cause | Error Origin Tuning Type | Remedy |
|--|--|--|
| Near Error  The light level difference between Points 1 and 2 are extremely small. | 2-point Tuning Full Auto Tuning Positioning Tuning | <ul style="list-style-type: none"> Change the detection function mode to a slower response time mode. Reduce the distance between the light emitting and light receiving surfaces. (Through-beam) Place the Fiber Head closer to the sensing object. (Reflective) |
| Over Error  Incident light level is too high. | All | <ul style="list-style-type: none"> Enhance the power tuning level. Use a thin-diameter fiber. Widen the emitter and receiver distance. (Through-beam) Distance the Fiber Head from the sensing object. (Reflective) |
| Low Error  Incident light level is too low. | Tuning other than Maximum Sensitivity Tuning | <ul style="list-style-type: none"> Decrease the power tuning level. Reduce the distance between the light emitting and light receiving surfaces. (Through-beam) Place the Fiber Head closer to the sensing object. (Reflective) |

The adjustment range of smart tuning is approx. 20 to 1/100 times. When selecting giga mode as detection function, the range will be approx. 2 to 1/100 times due to the large initial value.

Refer to "Detailed Settings" to change the power tuning level.

Minute Adjustment of Threshold Level

1. Press  button to adjust the threshold level.

The threshold level becomes higher.

The threshold level becomes lower.

Hold the key for high-speed level adjustment.

Convenient Setting Features

(1) Restore from the Incident Level Changed due to Dust and Dirt

● Power Tuning

1. Hold and buttons for 1 second or longer without a workpiece in the area.

Incident light level setting:
The Step 1 incident level is adjusted to the power tuning level.
Threshold setting:
Not changed. If the value is low, it will be set to the minimum value in which an output is turned ON/OFF correctly.

Perform the procedure with a workpiece in the area for reflective model setting. If the setting is made after position tuning, set both the through-beam model and reflective model with a workpiece.

Refer to "● Smart Tuning Error" for error displays.

(2) Stable Detection Regardless of Incident Level Change due to Dust and Dirt

● DPC Function (Use of the function with Through-beam model or Retro-reflective model is recommended)

1. Perform Smart Tuning.

Refer to "Smart Tuning"
Refer to "Power Tuning"

The DPC indicator turns ON when the DPC function is effective.

2. Set the DPC function ON in SET mode.

Refer to "Detailed Settings".

- Steps 1 and 2 can be reversed.
- The DPC function will be disabled when a smart tuning error occurs, differential function with maximum sensitivity tuning is performed, or the first incident light level of the positioning tuning is low.
- The incident light level is corrected to the power tuning level to maintain stable threshold and incident light levels. This provides stable detection regardless of the incident level changes caused by dirty sensor head, position error, or temperature changes.

(3) Reset Settings

● Setting Reset

Initializes all the settings by returning them to the factory defaults.

1. Hold and buttons for 3 seconds or longer.

2. Select [] in and press button.
3. Select [] in and press button.

| Item | Initial Value |
|-----------------|---------------|
| Threshold Value | 55 |
| Control Output | L-ON |

* Settings for other functions are returned to the detailed setting initial values. User-saved settings are retained. Smart Tuning is canceled.

Caution is required; the output is inverted if button is pressed first.

(4) Save or Read Settings

1. Hold and then hold button for 3 seconds or longer.

● User Save Function

Saves the current settings.

2. Select [] in and press button.

3. Select [] in and press button.

● User Reset Function

Reads out the saved settings.

2. Select [] in and press button.

3. Select [] in and press button.

Caution is required; the output is inverted if button is pressed first.

(5) Prevent Mistake-operation

● Key Lock Function

Disables all button operations. [] is displayed when the button is pressed.

■ Enable/Cancel
(This procedure)

* Press either of UP/DOWN.

(6) Reset Incident Light Level to "0"

● Zero Reset Function

Changes the incident light level to "0". The threshold level is also shifted accordingly.

■ Enable

■ Cancel

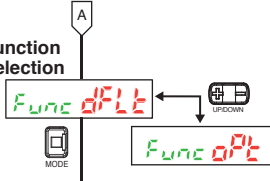

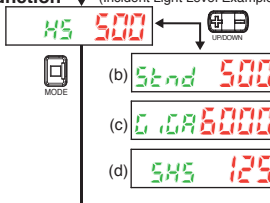

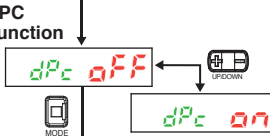

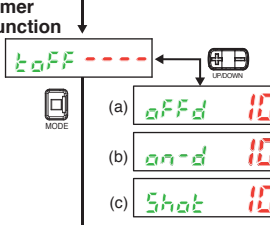

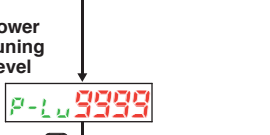

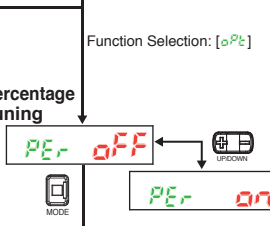

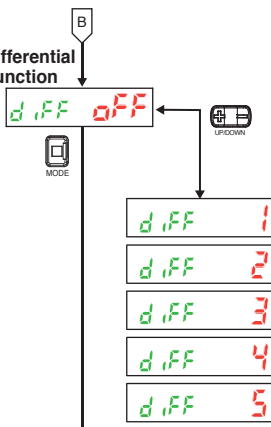

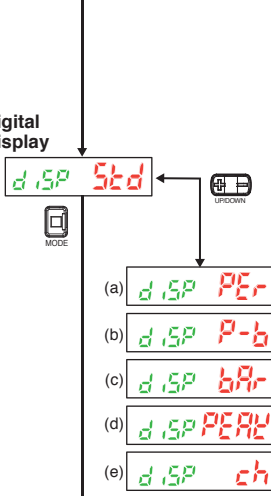

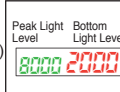

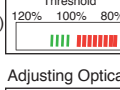

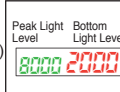

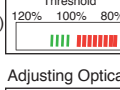

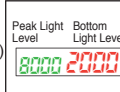

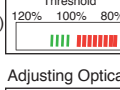

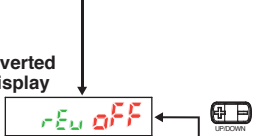

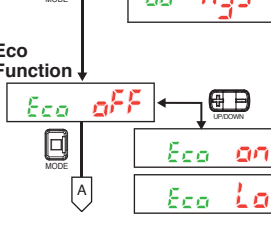

The zero reset function is canceled when either of the DPC function/differential function/Smart Tuning is performed.

Detailed Settings

Hold  button for 3 seconds or longer to enter SET mode.

SET mode provides the function settings described hereafter. The initial display shown after transition from one function to another represents the factory default.

| Function Setting | Description | | | | | | | | | | | | | | | |

Ratings and Specifications

E3X-CRT

| Item | Specifications |
|-------------------------------------|--|
| Communication method | CompoNet Communications |
| Connectable Sensors | Fiber Sensors: E3X-HD0 and E3X-MDA0 Laser Sensor Head with Separate Digital Amplifier: E3C-LDA0 Proximity Sensor with Separate Amplifier: E2C-EDA0 |
| Communications power supply voltage | 14 to 26.4 VDC (Communications Unit draws power from the communications power supply.) |
| Power and current consumption | 2.4 W max. (Not including the power supplied to Sensor.) 100 mA max. at 24 VDC (Not including the current supplied to Sensor.) |
| Functions | I/O communications, message communications, and Sensor error output |
| Indicators | MS Indicator (Green/Red), NS indicator (Green/Red), and SS (Sensor Status) indicator (Green/Red) |
| Vibration resistance | 10 to 150 Hz with double amplitude of 0.7 mm, or 50 m/s ² 80 min each in X, Y, and Z directions |
| Shock resistance | 150 m/s ² 3 times each in X, Y, and Z directions |
| Dielectric strength | 500 VAC 50/60Hz 1 min |
| Insulation resistance | 20MΩ min. |
| Ambient operating temperature | 0 to 55°C (with no icing or condensation) * The temperature is limited by the number of connected Fiber Amplifier Units. |
| Ambient operating humidity | 25% to 85% (with no icing or condensation) |
| Storage temperature | −30 to 70°C (with no icing or condensation) |
| Storage humidity | 25% to 85% (with no condensation) |
| Mounting method | 35-mm DIN track-mounting |
| Weight (packed state/unit only) | Approx. 220 g/Approx. 95 g |
| Accessories | Connector cover, DIN track End Plates and Instruction manual |

Note. The E3X-CRT has two operating modes: I/O mode 1 and I/O mode 2.
The following table gives the differences between these modes.

| | I/O classification | Number of allocated points | Maximum number of interconnected |
|------------|-----------------------|-------------------------------|-------------------------------------|
| I/O mode 1 | Input Unit | Input: 32 | 15 |
| I/O mode 2 | I/O Unit | Input: 64 Output: 64 | 16 |

* Temperature Limitations Based on Number of Connected Fiber Amplifier Units:
Groups of 1 to 2 Amplifier Units: 0 to 55°C,
Groups of 3 to 10 Amplifier Units: 0 to 50°C,
Groups of 11 to 16 Amplifier Units: 0 to 45°C

Read the User's Manual for precautions
on using this Unit. (E412)

E3X-ECT

| Item | Specifications |
|---------------------------------|---|
| Communication method | EtherCAT |
| Connectable Sensors | Fiber Sensor E3X-HD0 and E3X-MDA0 Laser Sensor Head with Separate Digital Amplifier: E3C-LDA0 Proximity Sensor with Separate Amplifier: E2C-EDA0 |
| Power supply voltage | 20.4 to 26.4 VDC |
| Power and current consumption | 2.4 W max. (Not including power the supplied to Sensor.) 100 mA max. at 24 VDC (Not including the current supplied to Sensor.) |
| Functions | DC (synchronous) mode, Free run mode, PDO communications,* 1 SDO communications, Sensor error output |
| Indicators | L/A IN indicator (Yellow), L/A OUT indicator (Yellow), PWR indicator (Green), RUN indicator (Green), ERROR indicator (Red), and SS (Sensor Status) indicator (Green/Red) |
| Vibration resistance | 10 to 150 Hz with double amplitude of 0.7 mm, or 50 m/s ² 80 min each in X, Y, and Z directions |
| Shock resistance | 150 m/s ² 3 times each in X, Y, and Z directions |
| Dielectric strength | 500 VAC 50/60 Hz 1 min |

91-B **PFP-100N**
PFP-50N

[illegible]

91-C **PFP-100N2**

Technical drawing of a mechanical part, showing front, side, and cross-sectional views with dimensions.

Front View (Left): Shows a cylindrical part with a total length of 1,000. The left end has a diameter of 4.5. The part features three sets of internal features (likely holes or grooves) spaced along its length. The dimensions for these features are 15, 25, 10, 25, 15 on the left side and 25, 10, 25, 15 on the right side.

Side View (Right): Shows the profile of the part with a total width of 16. The height is 35 ± 0.3. The internal features are shown with dimensions 27, 24, and 29.2. The bottom edge has a 1 mm radius and a 1.5 mm offset.

91-D **PFP-M**

Technical drawing showing a cross-section of a mechanical assembly. The top part shows a plate with a hole, labeled "M4 x 8 panhead screw". The hole diameter is 11.5. The plate thickness is 10. The total width of the plate is 50. The bottom part shows a cross-section of a component with a hole, labeled "M4 spring washer". The hole diameter is 1.3. The component has a total width of 35.5 and a hole diameter of 1.8. The distance from the hole center to the right edge is 1.8. The distance from the hole center to the left edge is 35.3. The distance from the hole center to the right edge of the component is 6.2. The distance from the hole center to the left edge of the component is 4.8. The distance from the hole center to the right edge of the component is 1.3.

Reference Information for Fiber Units

Influence of Fiber Cable Length

The sensing distance listed in the Fiber Units specifications are based on the fiber cable lengths found in the suffix of the model number. The sensing distance will change if the fiber cable is cut or extended.

The following graph shows the percentage change of the various fiber cable length, where 100% is the sensing distance for a fiber cable with a length of 2 m.

Use this as a guideline for installation distances.

Keep in mind that extending the cable with a fiber connector will result in even shorter sensing distances than the value given in the graph.

* The 100% value is for a fiber cable with a length of 2 m (same for Through-beam and Reflective Models).

Reflective Models: Sensing Distance Ratios by Workpiece Materials

The following graph shows the percentage change of the various workpieces, where 100% is the sensing distance for white paper, the standard sensing object.

Refer to the value of the material that looks like your workpiece.

* White paper is 100%.

Types of Fiber Cables

This section describes the features of different types of fiber cables.

(This is given in the Fiber Unit specifications as either Flexible or Bend-resistant for the cable bending radius, and Coaxial for the appearance.)

If no definition is given, a standard cable is used.)

• Flexible Fibers

The flexible fiber has a small bending radius for easy routing without easily breaking.

It is easy to use because the cable can be bent without significantly reducing light intensity.

• Break-resistant Fibers

This fiber is resistant to repeated bends for use on moving parts.

• Standard Fibers

This fiber have a large bending radius compared with bend-resistant or flexible fiber.

Use this fiber where the bending radius is large, or on non-moving parts.

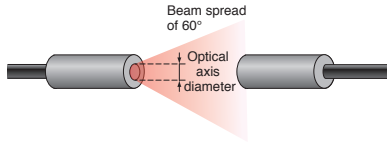

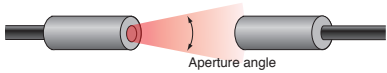

• Coaxial Reflective Fibers

These fibers are suitable for sensing small objects at close range.

Q&A

| Category | Question | Answer |
|-----------------------|---|--|
| Fiber Units | How do I interpret the optical axis diameter in the Fiber Unit specifications? | <p>The optical axis diameter is the beam size that the Through-beam Fiber Unit uses for detection.</p> <p>If you are detecting objects larger than the optical axis diameter, you can expect stable detection performance because the object will block all of the beams of light that are used for detection.</p> <p>The incident level may fluctuate, however, if the workpiece passes the beam at high speed.</p> <p>In this case, it is best to select a Fiber Unit with a smaller optical axis diameter, or change the response time of the Fiber Amplifier Unit to High-speed mode or to Super-high-speed mode setting.</p>  |
| | Are there any differences between the Fiber Units that are used for emitter and receiver? | <p>With Through-beam Fiber Units, there is no difference between emitter fibers and receiver fibers.</p> <p>With Reflective Fiber Units, the emitter fibers and receiver fibers are different on Coaxial Reflective Models.</p> <p>Emitter fiber cables have identification marks. Refer to the individual dimensions diagrams of Fiber Units for details.</p> |
| | What size must the hole be to mount a Threaded or Cylindrical Fiber Unit? | Refer to the recommended mounting hole dimensions given on pages 58 to 61. |
| | Are Fiber Cables available in different lengths? | Some models are available with either 5-m or 10-m cable. Ask your OMRON representative for details. |
| | What is the aperture angle? | <p>The aperture angle is the angle at which the emitter beam spreads out.</p>  |
| | Are these Fiber Units CE certified? | Fiber Units do not have any electrical components and therefore are exempt from CE certification. |
| Fiber Amplifier Units | Built-in Lens What the Fiber Units with built-in lenses? | These highly recommended Fiber Units have built-in lenses that achieve stable detection with high-power beams. |
| | Can the Fiber Amplifier Units be linked with other models? | The E3X-HD Series can be connected only with the E3X-DA-S and MDA Series. |
| | Can the Fiber Amplifier Unit be operated from a mobile console? | Mobile consoles cannot be used with either the E3NX-FA Series or the E3X-HD Series. |
| | Can a Sensor Communications Unit be used? | <p>If you use E3NX-FA0 Amplifier Units, you can use the E3NW-ECT(EtherCAT), E3NW-CRT(CompoNet) or E3NW-CCL(CC-Link).</p> <p>If you use E3X-HD0 Amplifier Units, you can use the E3X-CRT(CompoNet) or E3X-ECT(EtherCAT).</p> |

Fiber Amplifier Unit

Warning

This product is not designed or rated for ensuring safety of persons either directly or indirectly.

Do not use it for such purposes.

Do not use the product with voltage in excess of the rated voltage.
Excess voltage may result in malfunction or fire.

Never use the product with AC power supply.
Otherwise, explosion may result.

Precautions for Safe Use

The following precautions must be observed to ensure safe operation of the product. Doing so may cause damage or fire.

- (1) Do not install the product in the following locations.
 - Locations subject to direct sunlight
 - Locations subject to condensation due to high humidity
 - Locations subject to corrosive gas
 - Locations subject to vibration or mechanical shocks exceeding the rated values
 - Locations subject to exposure to water, oil, chemicals
 - Locations subject to stream
 - Locations subjected to strong magnetic field or electric field
- (2) Do not use the product in environments subject to flammable or explosive gases.
- (3) Do not use the product in any atmosphere or environment that exceeds the ratings.
- (4) To secure the safety of operation and maintenance, do not install the product close to high-voltage devices and power devices.
- (5) High-Voltage lines and power lines must be wired separately from this product. Wiring them together or placing them in the same duct may cause induction, resulting in malfunction or damage.
- (6) Do not apply load exceeding the ratings. Otherwise, damage or fire may result.
- (7) Do not short the load. Otherwise, damage or fire may result.
- (8) Connect the load correctly.
- (9) Do not miswire such as the polarity of the power supply.
- (10) To use this device as connecting with each other, be sure to connect with the same power supply and turn ON the power simultaneously. Using a separate power supply will influence the functions when connecting the devices to use them.
- (11) Do not use the product if the case is damaged.
- (12) Burn injury may occur. The product surface temperature rises depending on application conditions, such as the ambient temperature and the power supply voltage. Attention must be paid during operation or cleaning.
- (13) When setting the Sensor, be sure to check safety, such as by stopping the equipment.
- (14) Be sure to turn off the power supply before connecting or disconnecting wires.
- (15) Do not attempt to disassemble, repair, or modify the product Unit in any way.
- (16) When disposing of the product, treat it as industrial waste.
- (17) Do not use the Sensor in water, rain, or outdoors.

Precautions for Correct Use

- (1) Be sure to mount the unit to the DIN track until it clicks.
- (2) When using Amplifier Units with Wire-saving Connectors, attach the protective stickers (provided with E3X-CN-series Connectors) on the unused power pins to prevent electrical shock and short circuiting. When using Amplifier Units with Connectors for Communications Units, attach the protective caps (provided with Sensor Communications Unit).

Amplifier Unit with
Wire-saving Connector

Amplifier Unit with Connector
for Communications Unit

- (3) <E3NX-FA series>
The length for the cable extension must be 30 m or less (or less than 10 m for S-mark certified models).
Be sure to use a cable of at least 0.3 mm² for extension.
The power voltage must be 24 to 30 V when connecting amplifier units with extension cable and wire-saving connector.
- <E3X-HD series>
The length for the cable extension must be 100 m or less.
Be sure to use a cable of at least 0.3 mm² for extension.
- (4) Do not apply the forces on the cord exceeding the following limits: Pull: 40N; torque: 0.1N·m; pressure: 20N; bending: 29.4N
- (5) Do not apply excessive force such as tension, compression or torsion to the Amplifier Unit with the Fiber Unit fixed to the Amplifier Unit.
- (6) Always keep the protective cover in place when using the Amplifier Unit. Not doing so may cause malfunction.
- (7) It may take time until the received light intensity and measured value become stable immediately after the power is turned on depending on use environment.
- (8) The product is ready to operate 200 ms after the power supply is turned ON.
- (9) The Mobile Console E3X-MC11, E3X-MC11-SV2 and E3X-MC11-S cannot be connected.
- (10) Mutual interference prevention on the E3NX-FA Series does not function among the E3X-HD, E3X-DA-S, E3X-DA-N, E3X-SD, or E3X-NA Fiber Amplifier Units.
Mutual interference prevention on the E3X-HD Series does not function among the E3NX-FA, E3X-DA-N, E3X-SD, or E3X-NA Fiber Amplifier Units.
Mutual interference prevention on the E3X-HD Series does function among the E3X-DA-S and E3X-MDA Fiber Amplifier Units.
- (11) If the unit receives excessive sensor light, the mutual interference prevention function may not work properly, resulting in malfunction of the unit. In such case, increase the threshold.
- (12) The E3NW-ECT Sensor Communications Unit can be used with the E3NX-FA0, but the E3X-DRT21-S, E3X-CRT, and E3X-ECT Sensor Communications Units cannot be used. The E3X-CRT and E3X-ECT Sensor Communications Unit can be used with the E3X-HD0, but the E3X-DRT21-S and E3NW-ECT Sensor Communications Units cannot be used.
- (13) If you notice an abnormal condition such as a strange odor, extreme heating of the unit, or smoke immediately stop using the product, turn off the power, and consult your dealer.
- (14) Do not use thinner, benzene, acetone, and lamp oil for cleaning.

Mounting the Fiber Amplifier Units

■ Mounting on DIN Track

1. Let the hook on the Amplifier Unit's Fiber Unit connection side catch the track and push the unit until it clicks.

■ Removing from DIN Track

1. Push the unit in the direction 1.
2. Lift it up in the direction 2.

Refer to "I/O Circuit Diagrams" or check the side of the unit for wire color and role indications.

■ Mounting Amplifier Units in Group (Wire-saving Connector Type Models)

1. Mount the Fiber Amplifier units one at a time onto the DIN track and push them until they click.
2. Slide the Fiber Amplifier units in the direction 2.
3. Use End Plates (PFP-M: separately sold) at the both ends of the grouped Fiber Amplifier units to prevent them from separating due to vibration or other cause.
4. Tighten the screw on the End Plates using a driver.

- Under environments such as vibration, use an end plates even with a single Fiber Amplifier Unit.
- The maximum numbers of connectable Amplifier Units are given in the following table.

| | | Maximum number of interconnected | Maximum number of mutual interference prevention |
|---|---------------------|----------------------------------|--|
| E3NX-FA series* | | 30 | 10 |
| E3X-HD series standard models* (E3X-HD11/HD41/HD6/HD8) | | 16 | 10 |
| E3X-HD0 | With E3X-ECT | 30 | 10 |
| | With E3X-CRT | 16 | 10 |

- If Units are to be connected, the ambient temperature will change with the number of Units that are connected. Check the Ratings and Characteristics specifications.
- Always turn OFF the power before connecting or disconnecting Units.
- * The mutual interference prevention function cannot be used if the detection mode is set to super-high-speed mode (SHS).

Mounting Fiber Units

■ Use Fiber Cutter

Cut a thin fiber as follows.

For standard fibers, insert to the desired cutting position and cut.

| | | |
|-----|--|--|
| (1) | The fiber is shipped loosely tightened as shown in the figure at the right | |
| (2) | Adjust the fiber to the desired length and fully tighten. | |
| (3) | Insert the Fiber Unit into E39-F4 and cut it. | |
| (4) | Finished state. (Correctly cut end) | |

■ Mount Fiber Unit

1. Open the protective cover.
2. Raise the lock lever.
3. Insert the Fiber Unit in the fiber unit hole to the bottom.
4. Return the lock lever to the original position and fix the Fiber Unit.

- When mounting a coaxial reflective Fiber Unit, insert the single-core Fiber Unit to the upper hole (Emitter side) and the multi-core Fiber Unit to the lower hole (Receiver side). The cables for the Single-core Fiber Units (Emitters) have identification marks. Refer to the dimensions diagrams for details.

- When removing the Fiber Unit, follow the above steps in reverse order. To maintain the characteristics of the Fiber Unit, make sure the lock is released before removing the Fiber Unit.

Fiber Units

Warning

This product is not designed or rated for ensuring safety of persons either directly or indirectly.
Do not use it for such purposes.

Precautions for Correct Use

Do not use the Fiber Unit in atmospheres or environments that exceed product ratings.

• Mounting

Tightening Force

Refer to pages 58 to 61 for the tightening torque to apply when mounting a Fiber Unit.

<Threaded Models>

<Cylindrical Models>

<Chemical and Oil-resistant Models>

The following method is recommended for mounting Fiber Units with fluororesin-covered sensing heads (E32-T□F and E32-D□F) to prevent from cracking the fluororesin case.

If you use a set screw to secure the Fiber Unit, tighten it with care to prevent from cracking the case.

Connections

- Do not subject the Fiber Unit to excessive force, such as tension or compression.

Refer to pages 58 to 61 for tensile strengths.

- Make sure any bend in the Fiber Unit is larger than the allowable bending radius.

Refer to pages 58 to 61 for bending radius ratings and length of unbendable sections at the base of the Fiber Unit.

- Do not compress or place heavy loads on the fibers.

- The method shown below is an effective way to prevent the Fiber Unit from breaking due to vibration.

Sleeve Bender (E39-F11)

- The bending radius of the stainless steel tube should be as large as possible. The smaller the bending radius is, the shorter the sensing distance will be.

- Insert the tip of the stainless steel tube in the Sleeve Bender and slowly bend the tube along the curve of the Sleeve Bender.

Heat-resistant Fiber Units (E32-D51(R) and E32-T51(R))

The fibers of these Units cannot be extended using the E39-F10 Fiber Connector.

E32-T14

These Units may enter the light-ON state if there are reflective objects at the end of the lenses.

If reflection is a problem, attach the black stickers provided to the ends of the lenses.

E32-T16PR

To use the provided slit, peel off the backing sheet, align the slit with the edges of the sensing surface, and attach it to the sensing head.

Use the slit in applications where saturation occurs (i.e., changes in incident level cannot be detected) due to short sensing distances.

Vacuum-resistant Fiber Units (E32-□V)

Although the Flanges, the Fiber Units on the vacuum side, and the Lens Units have been cleaned, as an extra precaution, clean these with alcohol before using them in high-vacuum environments to ensure that they are properly degreased.

Liquid-level Detection Fiber Unit (E32-D82F1)

- Secure the Fiber Unit using the unbendable section. Otherwise, the liquid-level detection position may be displaced.
- For applications in hazardous environments, install the Fiber Unit in the hazardous environment but install the Amplifier Unit in a safe environment.

Liquid-level Detection Fiber Units (Tube-mounting Models)

- Make sure that the tube is not deformed when using a band to secure the Fiber Unit.

● Adjustment

Detection Position for Liquid-level Detection Fiber Unit (E32-D82F1)

The liquid-level detection position is 5.2 ±2 mm from the end of the fluororesin section. (Refer to the diagram on the right.)

The liquid-level detection position varies with the surface tension of the liquid and the degree of wetness at the Fiber Unit's detection position.

● Other Precautions

Liquid-level Detection Fiber Unit (E32-D82F1)

- Operation may become unstable in the following cases:
 1. Bubbles stick to the cone of the sensing head.
 2. Solute deposits on the cone of the sensing head.
 3. The liquid has a high viscosity.
- There are some liquids, such as milky white liquids, for which detection is not possible.
- Do not let the end of the fluororesin section bump into other objects.
Damage to or deformation of the sensing head may cause unstable operation.
- The product shall be used in the following conditions.
Ambient pressure: -50 to +500 kPa
- To use one-point teach mode (without object)
Please carry out teaching where the detecting head is sunk into liquid. The sensitivity is set to 10% upper to the incident level in the liquid. This setting method is effective in high degree of viscosity, because it becomes stable to the fluctuation of incident level when the liquid drops from the tip.
- To use two-point teach mode (with/without object)
Please teach where the detecting head is pulled up from liquid and next teach where it is sunk into liquid. This setting method is effective to a liquid which is easy to bubble at high temperature.
- Don't use maximum sensitivity mode because a liquid may be undetectable.

Chemical and Oil-resistant, Liquid-level Detection Fiber Unit (E32-D82F1)

Fluororesin shows strong chemical-resistant properties but is permeable if exposed to atmospheres with gaseous chemicals or water vapors, resulting in failure or damage.

Confirm applicability sufficiently before using the Fiber Unit in these environments.

Accessories

Use of E39-R3 Reflector Provided with E32-R21

1. Use detergent to remove any dust or oil from the surfaces where tape is applied. Adhesive tape will not be attached properly if oil or dust remains on the surface.
2. The E39-R3 cannot be used in areas that are exposed to oil or chemicals.

Mounting method of Disconnection-resistant Protective Spiral Tubes (E39-F32□)

1. Insert the Fiber Unit into the Protective Spiral Tube from the head connector (threaded).

2. Push the fiber into the Protective Spiral Tube. The tube must be straight so that the fiber enters without twisting. Turn the Protective Spiral Tube, not the fiber.

3. Secure the Protective Spiral Tube to the mounting panel with the provided nuts.

4. Use the provided saddle to secure the end cap of the Protective Spiral Tube.

(To secure the Protective Spiral Tube at a position other than the end cap, apply tape to the tube so that the portion becomes thicker in diameter.)

Attaching the E39-F10 Fiber Connector

Attach the Fiber Connector as shown in the following figures.

1. Insert the Fiber Unit in the retention clip.
2. Insert the retention clip into the splice.

- The Fiber Units should be as close as possible when they are connected.
The sensing distance is reduced by approximately 25% when Fiber Units are extended by the connector.
- Only 2.2-mm-diameter fibers can be connected.

- You can easily mount these Fiber Units by making a hole in the bracket and tightening just one nut.
- The cable follows the wall, so extra space is not required, and the cable will not get caught on other objects.

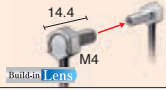

Build-in Lens

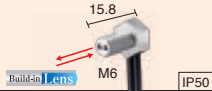

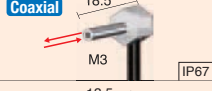

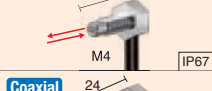

A Fiber Unit with Build-in Lens is the new standard in fiber units. We recommend this new standard Fiber Unit that achieves stable detection with a high-power beam. You don't have to worry about the lens falling off and getting lost. Through-beam Flat Fiber Units are also available. (→ 14 page)

| | | | | 1,000 | SHS: 550 | 1,500 | SHS: 550 | | | |

* The optical fiber is 2 m long on each side, so the sensing distance is 4,000 mm.

Note 1. The following model names and response times apply to the modes given in the Sensing distance column.

[E3X-HD] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (NPN output: 50 μs, PNP output: 55 μs)

[E3NX-FA] GIGA: Giga-power mode (16 ms), HS: High-speed mode (250 μs), ST: Standard mode (1 ms), and SHS: Super-high-speed mode (30 μs)

2. The values for the minimum sensing object are reference values that indicate values obtained in standard mode with the sensing distance and sensitivity set to the optimum values.

The first value is for the E3X-HD and the second value is for the E3NX-FA.

3. The sensing distances for Reflective Sensors are for white paper. (The sensing distances for the E32-LD11N 2M are for glossy white paper).

4. With Retro-reflective Models, objects with a high reflection factor may cause the Fiber Sensor to detect reflected light as incident light. Also, stable detection may not be possible for transparent objects. Check suitability beforehand.

Features of Coaxial Reflective Type

These Fiber Units offer better detection of small objects at close distances (of 2 mm or less) than Standard Reflective Fiber Units. They also detect glossy surfaces more reliably than Standard Reflective Fiber Units, even if the surface is tilted. The receiver fibers are arranged around the emitter fiber as shown below.

What Is "Flexible" Fiber?

The flexible fiber has a small bending radius for easy routing without easily breaking. It is easy to use because the cable can be bent without significantly reducing light intensity.

Structure which has a cladding around a large number of ultrafine cores.

Transparent Object Detection

Retro-reflective Models are ideal for detection of transparent objects.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See <http://www.omron.com/global/> or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

* For performance (sensing distance and minimum sensing object) based on November 2017 OMRON investigation.
